Introduction

The Soil Association standards put the principles of organic production into practice. These organic standards encompass *EU Regulations 2018/848 and subsequent implementing and delegated acts* (referenced throughout as the EU Organic Regulation). These regulations are the legal basis for the control of organic farming, food processing and organic labelling within the EU and Northern Ireland.

Northern Ireland has remained in the EU single market and continues to follow EU rules on customs requirements and the regulation of agri-food products, including the EU Organic Regulation. If you are in Northern Ireland, for the purpose of the EU Organic Regulation requirements, you need to apply these standards as if part of the EU. If you bring in products from EU member states you will not need importing on the scope of your organic license, however, if you bring products from the other parts of the UK or non-EU countries you will need to meet the importing requirements.

The Soil Association has higher organic standards than required by the EU Organic Regulation in key areas: delivering the highest levels of animal welfare, protecting human and animal health, safeguarding the environment and protecting the interests of organic consumers. These reflect our mission and vision as a charitable organisation.

Each standard has a reference which tells you which part of the EU Organic Regulation it refers to, or whether it is a Soil Association higher **standard. Each Soil Association higher standard is accompanied by a 'Why?' box which explains the rationale behind the standard** and why we expect our licensees to go further than required by the EU Organic Regulation.

Businesses across the world can become certified to the Soil Association standards. A **'competent authority'** is authorised by EU Member States to make rulings on organic legislation. In Northern Ireland the competent authority is NICA (Northern Ireland Competent Authority), The certification body that is appointed by the Soil Association to inspect and certify to Soil Association organic standards in the UK is Soil Association Certification. **Throughout these standards 'your certification body' refers to Soil Association Certification. For further definitions,** please refer to the separate Glossary document on our website.

The EU Organic Regulation does not cover processing of non-food crops such as for textiles and cosmetic products and certification of inputs.

The Soil Association offers standards for areas not covered by the EU Organic Regulation. These include:

- [textiles](#)
- [cosmetics](#)

Please contact us if you would like more information or visit [our website](#).

Guide to using these standards

The standards are listed in the column on the left, with a white background for EU Organic Regulation standards and a blue background for Soil Association higher standards. Where necessary, guidance is provided in the column on the right, with a grey background to differentiate it from the standard.

- Each standard is referenced with the relevant article/s of the EU Organic Regulation or shows that it is a Soil Association higher standard.
- Each Soil Association higher standard has a Why? box to explain its purpose and rationale.

 This symbol shows where you need to keep a record to demonstrate that you are meeting the standard. The specific requirements for the records will be detailed in the standard or guidance.

 This symbol shows where additional relevant information is provided.

 This symbol shows where an extra sourcing requirement applies for processors using an organic product that is not certified to Soil Association standards or is sourced outside of the UK/EU. If you would like to know what the sourcing requirements are, you can view our annex on [Sourcing Organic Ingredients](#). Our [Working Together for Better Sourcing](#) webpage explains the challenges surrounding the sourcing of organic ingredients and how we are working with others to address them.

What is guidance?

Guidance provides supplementary information to the standards which explains how compliance will be assessed. It tells you where and how to provide the information required, for example through record keeping or demonstration at your inspection. The guidance may also provide examples of actions and measures to help you demonstrate compliance, and links to best practice guides and information.

| EXAMPLE Standards | EXAMPLE Guidance |
|---|--|
| <p>SA NI 3.4.16 Withdrawal periods</p> <p>If you treat your animals with any allopathic veterinary medicinal products you must wait twice the legal withdrawal period as referred to in Article 11 of <i>Directive 2001/82/EC</i>, and no less than 48 hours, before you can sell your livestock products as organic.</p> <p><i>(EC) 2018/848 Annex II Part II (1.5.2.5)</i></p> | <p>You must have an effective system in place to ensure that treated animals or their products are not sold for human consumption in the United Kingdom.</p> <p> Both statutory and non-statutory medicinal products.</p> <p>If veterinary medicinal products are prescribed under the Cascade, you must implement twice the withdrawal period as legally required under the Cascade.</p> <p> If there is no suitable medicinal product available in the UK to treat a condition in a particular animal, you may use an unauthorised veterinary medicinal product.</p> |

The relevant part of the EU organic regulation is referenced here.

The R symbol shows which records you need to keep to demonstrate that you meet this standard.

The I symbol shows where additional relevant information is provided.

Soil Association higher standards are clearly shown.

| <p>SA NI 1.8.4 Using the Soil Association symbol</p> <ol style="list-style-type: none">1. You must use the Soil Association symbol on the packaging of Soil Association certified products which contain 95%-100% organic ingredients, except where there is a good reason for not doing so.2. You must not use the Soil Association symbol on products containing less than 95% organic ingredients.3. You must not use the Soil Association symbol on in-conversion products. | <p>Examples of exceptions where you would not have to use the Soil Association symbol are:</p> <ul style="list-style-type: none">• where the label is so small that it would jeopardise other information required by law• for products which are only sold outside the UK• where your labelling machine cannot include the symbol and you cannot apply the symbol in another way• where you are acting as a sub-contractor to a brandholder who is licensed with a different organic certification body and the brandholder doesn't want you to use it, and• where the symbol has not been used on a brand since July 2008 <p>For in-conversion products you could use the wording 'Soil Association approved organic conversion'.</p> |
| <p>Use of the Soil Association symbol on products that cannot be called organic could be confusing and has the potential to mislead consumers.</p> | |

Soil Association higher standard

Why?

Each Soil Association higher standard has a Why? box to explain its purpose and rationale.

SA NI 1.0 General standards for organic farming and growing

SA NI 1.1 Scope

| Standards | Guidance |
|--|---|
| <p>SA NI 1.1.1 Scope of the standards</p> <ol style="list-style-type: none">1. The standards in this document set out the rules that apply for all stages of production, preparation and distribution in order for products to be labelled and marketed as organic. These organic farming and growing standards cover:<ol style="list-style-type: none">a) crop production (including wild harvesting)b) livestock husbandryc) vegetative propagating material and seeds for cultivatingd) yeasts used for feed2. These standards contain detailed production rules for the following livestock species:<ol style="list-style-type: none">a) bovine, including buffalo and bison,b) equinesc) pigsd) sheepe) goatsf) poultryg) beesh) cervine3. For livestock species not referred to in these standards, we can in certain cases, apply the standards for similar species to their production.4. You must ensure you comply with all other relevant EU legislation. <p><i>(EC) 2018/848 Art. 2(1)(2)(3)(4)(5)</i></p> | <p>Please contact us if you want to use our standards for livestock species not referred to in this document.</p> <p>If you are unsure whether the activity you are carrying out requires certification please contact us.</p> <p>For standards regarding food and drink, seed and livestock feed processing please refer to the food and drink standards, and feed processing standards, on our website.</p> |
| <p>SA NI 1.1.2 Products from hunting and fishing of wild animals</p> <p>Products from the hunting and fishing of wild animals cannot be sold as organic.</p> <p><i>(EC) 2018/848 Art. 3(2)</i></p> | |

SA NI 1.2 Objectives and Principles

What is this chapter about?

This section details the principles on which these organic standards are based. **Organic is a 'whole system' approach to farming and food production.** It recognises the close interrelationships between all parts of the production system from the soil to the consumer. This comprehensive set of organic principles guides our work and our standards.

Standards

Guidance

SA NI 1.2.1 Objectives and general principles of organic production

Your production system must meet the following principles and objectives:

1. To produce food of high quality and in sufficient quantity by the use of processes that do not harm the environment, human health, plant health or animal health and welfare.
2. To work within natural systems and cycles at all levels, from the soil to plants and animals and contribute to the protection of the environment and the climate.
3. To maintain the long-term fertility and biological activity of soils.
4. To contribute to high animal welfare standards and, in particular, to meeting animals' species-specific behavioural needs.
5. To respect regional, environmental, climatic and geographic differences and the appropriate practices that have evolved in response to them.
6. To maximise the use of renewable resources and recycling.
7. To design and manage organic systems which make the best use of natural resources and ecology to prevent the need for external inputs. Where this fails or where external inputs are required, the use of external inputs is limited to organic, natural or naturally-derived substances.
8. To limit the use of chemically synthesised inputs to situations where appropriate alternative management practices do not exist, or natural or organic inputs are not available, or where alternative inputs would contribute to unacceptable environmental impacts.

9. To exclude the use of soluble mineral fertilisers.
10. To foster biodiversity and protect sensitive habitats and landscape features, such as natural heritage sites.
11. Substantially contribute to a non-toxic environment.
12. To exclude the use of GMOs and products produced from or by GMOs with the exception of veterinary medicinal products.
13. Encourage short distribution channels and local production.
14. Encouraging the preservation of rare and native breeds in danger of extinction.
15. Contributing to the development and use of plant genetic material adapted to the specific needs and objectives of organic agriculture, including the use of organic heterogeneous material and varieties suitable for organic production.
16. Fostering the development of organic plant breeding activities in order to contribute to favourable economic perspectives of the organic sector.
17. Ensuring the integrity of organic production at all stages of the production, processing and distribution of food and feed.
18. The exclusion from the whole organic food chain of animal cloning, rearing artificially induced polyploid animals, and ionising radiation.

(EC) 848/2018 Art. 4

(EC) 848/2018 Art. 5

(EC) 848/2018 Annex II Part 1(1.9.2)

(EC) 848/2018 Art. 24(5)

SA NI 1.2.2 Specific principles for organic farming

In addition to the overall organic principles set out in standard 1.2.1, organic farming must be based on the following specific principles:

1. The maintenance and enhancement of soil life and natural soil fertility, soil stability, soil water retention and soil biodiversity preventing and combating soil compaction, loss of soil organic matter, soil erosion, and the nourishing of plants primarily through the soil ecosystem.
2. The minimisation of the use of non-renewable resources and off-farm inputs.
3. The recycling of wastes and by-products of plant and animal origin as inputs in plant and livestock production.
4. Taking account of the local or regional ecological balance when taking production decisions.
5. The use of seeds and animals with a high degree of genetic diversity, disease resistance and longevity.
6. The maintenance of animal health by encouraging the natural immunological defence of animals and the selection of appropriate breeds and husbandry practices.
7. The maintenance of plant health by preventative measures, such as appropriate crop rotations, mechanical and physical methods and the protection of natural enemies of pests.
8. In the choosing of plant varieties, having regard to the particularities of the specific organic production systems, focussing on agronomic performance, disease resistance, adaptation to diverse local soil and climate conditions and respect for the natural crossing barriers.
9. The use of organic plant reproductive material, such as plant reproductive material of organic heterogeneous material and of organic varieties suitable for organic production.
10. The production of organic varieties through natural reproductive ability and focussing on containment within natural crossing barriers.

11. The possibility for farmers to use plant reproductive material obtained from their own farms in order to foster genetic resources adapted to the special conditions of organic production.
12. The practice of site-adapted and land-related livestock production.
13. The practice of soil-related crop cultivation.
14. The production of products of organic livestock from animals that have been raised on organic holdings since birth or hatching and throughout their life.
15. The choice of breeds having regard to a high degree of genetic diversity, the capacity of animals to adapt to local conditions, their breeding value, their longevity, their vitality and their resistance to disease or health problems.
16. The feeding of livestock with organic feed composed of agricultural ingredients from organic farming and of natural non-agricultural substances.
17. The application of animal husbandry practices, which enhance the immune system and strengthen the natural defence against diseases, in particular including regular exercise and access to open air areas and pasture where appropriate.
18. Avoiding any endangerment of species of conservation interest that might arise from organic production.

EC) 2018/848 Art. 6

| SA NI 1.3 Becoming Soil Association certified | |
|--|---|
| <p>What is this chapter about?</p> <p>This chapter explains which activities require certification and how you can certify your business to the Soil Association standards.</p> | |
| Standards | Guidance |
| <p>SA NI 1.3.1 Certifying your business</p> <p>To become certified to these organic standards you must have a certification contract with an independent, accredited certification body and comply with all relevant organic standards for your organic activity.</p> <p style="text-align: right;"><i>(EC) 2018/848 Art 34(1)</i></p> | <p>Businesses across the world can become certified to the Soil Association standards. In NI NICA is the competent authority, they have delegated some controls to accredited organic certification bodies. The certification body that is appointed by the Soil Association to inspect and certify to Soil Association organic standards in NI is Soil Association Certification.</p> <p>In the EU, businesses can only become certified to the Soil Association standards if they are already certified to the EU Organic Regulation by another approved certification body in the relevant country. Additionally, Soil Association Certification is accredited by IOAS (International Organic Accreditation Service) and authorised to offer organic certification in specific countries outside the EU for certain types of products. Please contact Soil Association Certification for more details.</p> |
| <p>SA NI 1.3.2 Activities that require certification</p> <ol style="list-style-type: none"> 1. In the UK and EU all stages of the organic supply chain must hold organic certification. 2. Your business must be certified if you produce, process, package, store, label, import, export, or distribute organic products. This includes, wholesale, storage and warehousing, acting as the first consignee for imported products or place such products on the market, and any other activities that require the physical or financial ownership of organic or in-conversion products or ingredients. 3. You do not need certification if you only sell pre-packed organic products directly to the final consumer or user provided that you do not produce, prepare, store organic products other than in connection to the point of sale or import such products from a third country or sub-contract out such activities. In other EU countries certification may be required for these activities. <p style="text-align: right;"><i>(EC) 2018/848 Art. 34(1)(2)(3)</i></p> | <p>Without adequate certification at each stage of the supply chain, the products may lose their organic status.</p> <p>Examples of businesses not requiring certification in the UK include supermarkets and mass caterers serving food e.g. restaurants, cafes, catering companies.</p> <p>If you are unsure whether the activity you are carrying out requires certification please contact us.</p> <p>For more information on the certification requirements for importing and exporting please refer to section 6.8 in the food and drink standards.</p> <p>Placing on the market' is defined as: 'the holding of food or feed for the purpose of sale, including offering for sale or any other form of transfer, whether free of charge or not, and the sale, distribution, and other forms of transfer themselves' Regulation (EC) No 178/2002; Art.8.</p> |

SA NI 1.3.3 Organic certificate

1. You are not allowed to sell products with reference to organic or in-conversion without a valid certificate that shows that your activity complies with these organic standards.
2. Certificates are issued once Soil Association Certification has inspected your organic activity and they are satisfied that your activity meets organic standards. The certificate will list all your certified activities and the crops, livestock and/or products you are certified to produce, process and/or sell as organic.
3. The certificate may be in electronic format.
4. You are not entitled to obtain a certificate from more than one control body for the same category of products in the same country. This includes at different stages of production, preparation and distribution

(EC) 2018/848 Art. 35(1)(2)(4)

(EC) 2018/848 Art. 39

Soil Association Certification will issue licensees with the following documentation:

- An annual certificate with valid from and to dates, your name, address and licence number
- A Trading Schedule with your certified products, activities and status
- For producers, an Information Schedule listing your licensed enterprises, holdings and fields.

If you are a farmer with land or crops in conversion, these will be shown as **'product under conversion to organic farming'** on your Trading Schedule. Once they have gone through the relevant conversion period they will be **shown as 'organic' on your Trading Schedule and you can start trading as organic. If your livestock are shown as 'converted breeding stock' they cannot be traded as organic.**

Annual renewal of your licence is linked to you continuing to meet the relevant standards and payment of the relevant renewal fee. Within a year of your original application date we will send you a renewal invoice.

The categories are as follows (2018/848 Article 35.7)

- a) unprocessed plants and plant products, including seeds and other plant reproductive material;
- b) livestock and unprocessed livestock products;
- c) algae and unprocessed aquaculture products;
- d) processed agricultural products, including aquaculture products, for use as food;
- e) feed;
- f) wine;
- g) other products listed in Annex I to this Regulation or not covered by the previous categories.

Examples:

An egg producer who also packs eggs, or a grower who also packs the produce could not have certification with 2 different certification bodies.

| | |
|--|---|
| | This because both the production and the packing would be classed as category A products (unprocessed). |
| <p>Soil Association Certification</p> <p>Since 1973 Soil Association Certification Limited (Soil Association Certification) has certified farm enterprises, foods and other products as organic. Soil Association Certification is a wholly owned subsidiary of the Soil Association charity. We are registered with NICA to certify organic food production and processing under the terms of EU Organic Regulation No. 2018/848.</p> <p>Certification bodies must be able to prove that they have the expertise, equipment, infrastructure and sufficient number of suitable qualified and experienced staff to carry out the task of certification. Soil Association Certification Limited is accredited and subject to an annual inspection by the United Kingdom Accreditation Service (UKAS) for UK licensees and IOAS for non-EU licensees.</p> <p>To uphold organic integrity and in order to work efficiently, certification bodies are obliged to communicate and exchange relevant certification information about their licensees to control authorities and other certification bodies. This includes when:</p> <ul style="list-style-type: none"> a) licensees change certification bodies b) non-compliances are found c) organic status of a products is lost, and d) certification is withdrawn. | |
| <p>Information</p> <p>If you are interested in certifying your business, contact Soil Association Certification via:</p> <p>Our website: www.soilassociation.org/certification/get-in-touch/</p> <p>Email: GoOrganic@soilassociation.org</p> <p>Phone: 0117 914 2406</p> <p>Post: Spear House, 51 Victoria Street, Bristol, BS1 6AD</p> | |

SA NI 1.4 Your obligations when certified

What is this chapter about?

This chapter explains your responsibilities and obligations when certified to these organic standards.

| Standards | Guidance |
|---|---|
| <p>SA NI 1.4.1 Description of your activities</p> <ol style="list-style-type: none">1. Before starting your organic enterprise, you must describe how you will comply with these organic standards and the relevant practical measures to be taken to ensure compliance with this Regulation. If you make any changes to your activity you must update your certification body accordingly.2. You must include a full description of your premises, units and activities including:<ol style="list-style-type: none">a) fields and their status (organic, non-organic in conversion)b) the date of the last input of any agrochemicals, artificial fertilisers and other materials we do not allow for each field or areac) facilities used for receipt of goods, storage and where applicable facilities for processing, packaging and labelling, andd) procedures used for transporting products.3. For livestock production you must also include:<ol style="list-style-type: none">a) livestock buildingsb) grazing areas and open air runsc) facilities for storing manured) premises for storage, packaging and processing of livestock, livestock products, raw materials and inputse) a plan of your livestock managementf) a plan for spreading manure agreed with your certification body together with a full description of the areas given over to crop production, andg) where appropriate, as regards the spreading of manure, any written arrangements with other holdings. <p><i>(EC) 2018/848 Art. 39</i></p> | <p>Some of this information will be collected as part of the application process.</p> <p>You must let us know if and when you plan to expand into new areas. For example, if you wish to add land, keep new livestock species or enterprises, or start a box scheme or start to pack or process food or feed. Depending on what changes are made, we might need to update your certificates and you may need an additional inspection or licence.</p> <p>Livestock management plan templates can be found on our website.</p> |

| | |
|---|---|
| <p>SA NI 1.4.2 Subcontracted operations</p> <p>If you subcontract out your organic activity, in part or whole, to a third party, they must hold their own organic certification, unless you remain responsible for that organic production and have not transferred that responsibility to the subcontractor, in which case those activities may be covered under the scope of your organic license. The information in 1.4.1 must also include:</p> <ul style="list-style-type: none"> a) a list of the subcontractors, including their activities and the certification body or authority that they are certified by b) a written agreement by the subcontractors that their operation will comply with the control measures required as part of organic certification, and c) details of all the practical measures taken to ensure and demonstrate full traceability of products. <p style="text-align: right;"><i>(EC) 2018/848 Art. 34(3)(5)</i></p> | <p>This would include contractors used for agricultural work, such as harvesting, spraying, seed cleaning or storage.</p> <p>To comply with control measures contractors will be required to supply copies of any records of the work they have carried out for example field records, cleaning records of any storage areas or equipment and details of any separation measures they have in place to prevent contamination.</p> <p>Subcontractors premises and facilities may be subject to inspection to comply with control measures. You may need an appropriate agreement or contract with the subcontractor to allow these control measures to take place.</p> |
| <p>SA NI 1.4.3 Declaration</p> <p>You must sign a declaration stating that you:</p> <ul style="list-style-type: none"> a) have described your organic enterprise and activities as referred to in 1.4.1 accurately b) will perform your operations according to organic rules c) accept any enforcements in case of non-compliance d) inform the buyers of loss of status of your product e) accept exchange of information about your operation between different certification bodies or control authorities in the event that subcontractors are subject to controls by different control authorities or control bodies. f) accept handing over information about your certification history when changing certification body or control authority g) will inform your buyer and certification body or control authority immediately in the event that a suspicion of non-compliance has been substantiated, that a suspicion of non-compliance cannot be eliminated, or | <p>This is covered in the contract and declaration you sign after every inspection.</p> |

| | |
|---|---|
| <p>that non-compliance that affects the integrity of the products in question has been established.</p> <p>h) in the case of withdrawing certification inform the certification body or control authority without delay</p> <p>i) accept that your certification body or control authority retains your certification history for a minimum of 5 years</p> <p>j) must inform the certification body of any changes to your activities.</p> <p><i>(EC) 2018/848 Art. 39(1)(d)(iii)</i></p> | |
| <p>SA NI 1.4.4 Other statutory requirements</p> <p>You must make sure your organic business and operations comply with all statutory regulations in your country, and you must make all declarations and other communications that are necessary for official controls.</p> <p><i>(EC) 2018/848 Art.2(4)(5)</i> <i>(EC) 2018/848 Art. 37</i> <i>(EC) 2018/848 Art. 39(1)(b)</i></p> | <p>This includes but is not limited to requirements concerning:</p> <ul style="list-style-type: none"> • premises • equipment • staff facilities • general hygiene • protection of food from contamination or deterioration • animal welfare • water • transport • labour and workers, and • wildlife conservation and protection. |
| <p>SA NI 1.4.5 Employment</p> <p>You must not use forced or involuntary labour or child labour that interferes with their education.</p> <p><i>Soil Association higher standard</i></p> | <p>Note that this standard is also a requirement of several EU Directives including 94/33/EC Protection of Young People at Work, and 2011/36 Preventing and combating trafficking in human beings and protecting its victims. If you are outside the EU, it may be a requirement of the International Labour Organisation Conventions that have been ratified in your country. If it is not you must still meet this requirement.</p> <p>Labour management tools, such as Sedex, can be a useful way of helping to ensure that you meet this standard and identify, mitigate and manage risks in your supply chain.</p> |
| <p style="text-align: center;">Why?</p> <p>Organic food which has been produced in a way that compromises the basic rights of people is counter to the principles and expectations of the organic movement and organic consumers.</p> | |

| | |
|---|--|
| <p>SA NI 1.4.6 Certification code</p> <ol style="list-style-type: none"> 1. Each certification body is issued with a unique certifier code. 2. You must use this code if you are packing and labelling products yourself or if another Soil Association certified business in the UK is packing or labelling the product on your behalf. <p style="text-align: right;"><i>(EC) 2018/848 Art. 32(5)</i> <i>(EC) 2021/279 Art. 3</i></p> | <p>Please refer to the labelling section 1.8 for more information on labelling requirements.</p> <p>In Northern Ireland, products produced or processed in Northern Ireland, the soil Association certifier code is XI-ORG-05.</p> |
| <p>SA NI 1.4.7 Transitional measures for stock of products produced in accordance with Regulation (EC) 834/2007</p> <p>Products produced in accordance with Regulation (EC) No 834/2007 before 1 January 2022 may be placed on the market after that date until stocks are exhausted.</p> <p style="text-align: right;"><i>(EC) 2018/848 Art. 60</i></p> | |

SA NI 1.5 Inspections

What is this chapter about?

This chapter explains the certification and inspection process and details your obligations as a licensee and the obligations of the certification body during the inspection process.

| Standards | Guidance |
|--|---|
| <p>SA NI 1.5.1 Inspection visits</p> <ol style="list-style-type: none">1. A physical inspection of your organic certified activities must be carried out once per year. You may be subject to additional announced or unannounced inspections based on an assessment of risk.<ol style="list-style-type: none">a. Where no non-compliances affecting organic integrity have been raised in the last three years and no additional areas of risk have been raised by us you may have a reduced frequency of inspection. The period between two physical on-the-spot inspections shall not exceed 24 months.b. Where a physical inspection does not take place an annual verification of compliance is still required where information and documentation will be requested.2. You may also be inspected by your competent authority as part of their surveillance of our inspection procedures. <p style="text-align: right;"><i>(EC) 2018/848 Art. 38(2)(3)</i></p> | <p>We may carry out additional inspections if:</p> <ul style="list-style-type: none">• you wish to add a new enterprise to your licence• you move to new premises• we receive a complaint regarding your business• it is necessary to inspect seasonal activity or at different times of year• we need to inspect again to make sure you have corrected non-compliances• you are selected as part of our additional inspection programme and/or our risk assessment of your operations suggests the need for this. <p>We may charge you for these additional inspections if we consider they are needed because of non-compliances.</p> <p>At least 10% of a certification body's inspections must be unannounced and 10% must be risk-based extra inspections. These are based on the general evaluation of the risk of non-compliance with the organic production rules, taking into account at least the results of previous controls, the quantity of products concerned and the risk for exchange of products.</p> |
| <p>SA NI 1.5.2 What happens at the inspection</p> <ol style="list-style-type: none">1. At your inspection Soil Association Certification will:<ol style="list-style-type: none">a) verify that the description of your activities provided in your declaration is accurateb) verify whether your activities are compliant with organic standards, andc) compile an inspection report with any possible deficiencies and non-compliances found.2. You or an appointed representative must sign the inspection declaration stating that you agree with the | <p>As part of the closing meeting your Inspector will explain any non-compliances found during your inspection and will ask you to sign a declaration and explain the need to complete an Action Summary form (usually left with you at the end of the inspection) which lists the outcomes of the inspection.</p> <p>This includes any areas that do not comply with the standards and asks how you will correct them. It may also ask for extra information to complete the approval process.</p> |

| | |
|---|---|
| <p>outcomes of the inspection and to undertake necessary corrective actions.</p> <p><i>(EC) 2018/848 Art. 39(1)(d)</i> <i>(EC) 2018/848 Art. 38(6)</i></p> | <p>You must respond with details of the actions you will take to address non-compliances and supply any other information requested, before the deadline given. When we have received your returned form and agreed the information you have given is satisfactory, we will approve your corrective actions and issue/reissue your certificate.</p> |
| <p>SA NI 1.5.3 Access to facilities You must give Soil Association Certification or your control authority:</p> <ul style="list-style-type: none"> a) access to all parts of your unit and all premises, including any non-organic production units and any storage premises for input products which it deems necessary in order to certify your organic activities b) access to accounts and relevant supporting documents which it deems necessary in order to certify your organic activities c) any information reasonably necessary for the purposes of certifying your organic activities, and d) when requested, the results of your own quality assurance programmes. <p><i>(EC) 2018/848 Art. 38(1)(b)(c)</i> <i>(EC) 2017/625 Art. 15(1)(2)</i></p> | |
| <p>SA NI 1.5.4 Sampling You must allow Soil Association Certification to take samples which will be analysed for the presence of prohibited substances and checking compliance to organic standards.</p> <p><i>(EC) 2018/848 Art. 38(4)(c)</i> <i>(EC) 2021/279 Art. 7(c)</i></p> | <p>We will take samples if there is a risk that organic standards have not been complied with or to verify that sufficient measures are in place to prevent contamination of organic products. Certification bodies are obliged to take samples from the equivalent of 5% of their licensees per year.</p> |
| <p>SA NI 1.5.5 Specific requirements for inspecting parallel production of perennial crops If you parallel produce perennial crops you must inform Soil Association Certification at least 48 hours before you harvest each crop so that inspection visits can take place during harvest.</p> <p><i>(EC) 2018/848 Art. 9(8)(9)</i></p> | |

SA NI 1.6 Non-compliance with the standards

What is this chapter about?

This chapter deals with non-compliances. A non-compliance is when an activity does not comply with an organic standard.

| Standards | Guidance |
|---|--|
| <p>SA NI 1.6.1 Non-compliances</p> <p>1. Where you are found not to comply with organic standards Soil Association Certification will issue you with a non-compliance. The level of sanction will be proportionate to the severity and extent of the non-compliance and the risk it poses to the integrity of the organic product. Soil Association Certification will always apply the precautionary principle when making decisions on compliance to organic standards.</p> <p>2. Depending on the severity of the non-compliance Soil Association Certification may suspend or even withdraw your licence. If your licence is suspended or withdrawn you must not trade as organic.</p> <p>(EC) 2018/848 Art. 37 (EC) 2018/848 Art. 38(1) (EC) 2018/848 Art. 41(3) (EC) 2018/848 Art. 42</p> | <p>After your inspection we will draw up an <i>Action Summary Form</i> (either at inspection or we will send it to you afterwards). This lists areas that do not comply with the standards and asks how you will correct them.</p> <p>The different grades of sanctions are as follows:</p> <ul style="list-style-type: none">• minor non-compliance• major non-compliance• critical non-compliance, or• manifest infringement. <p>You are required to complete the <i>Action Summary Form</i> with the actions you will take to comply with the standards, and return it to us with any other information we request before the deadline given. When the Certification team has received your completed form and agreed that the information you have given is satisfactory they will approve the <i>Action Summary Form</i> and renew your licence.</p> <p>We may suspend or withdraw your licence in the following cases:</p> <ul style="list-style-type: none">• if you are in breach of your contract with us• if you do not pay your fee within the deadlines• failure of licensee to return certified sales declaration (CSD)• we are unable to arrange an inspection• an inspector is refused access to premises• an inspector is refused permission to take a sample• if you do not send the completed <i>Action Summary Form</i>, or the information we request, within the deadlines• severe or repeated non-compliance resulting in loss of organic integrity of an operation, product or batch• a fraudulent activity is reported by an authority. |

| | |
|---|--|
| | <p>The classification of the non-compliances falls into three categories: minor, major and critical, and takes into account the following criteria:</p> <ul style="list-style-type: none"> • the measure in place to prevent non-compliances. • the impact on the integrity of the organic or in-conversion status of product • the ability of the traceability system to locate the affected product(s) in the supply chain; • previous non-compliances. |
| <p>SA NI 1.6.2 Reporting non-compliances</p> <p>1. If you suspect that a product you have produced, prepared, imported or received from another operator does not meet organic standards you must:</p> <p>(a) identify and separate the product concerned</p> <p>(b) check whether the suspicion can be substantiated</p> <p>(c) not place the product on the market as organic or in-conversion and not use it in organic production, unless the suspicion can be eliminated</p> <p>(d) where the suspicion has been substantiated or where it cannot be eliminated, immediately inform us and provide us with available information, where appropriate</p> <p>(e) fully cooperate with us in verifying and identifying the reasons for the suspected non-compliance.</p> <p>If we have a substantiated suspicion that you intend to place a product on the market as organic which does not meet organic standards, we will tell you to withhold the product whilst we investigate. We will complete the investigation in a reasonable time period taking into account the complexity of the case and the durability of the product. Before we make this decision we will give you opportunity to comment. You will need to cooperate fully with any investigation to resolve the suspicion.</p> <p>If the suspicion is confirmed, then you must remove any reference to organic from the product. If the suspicion is not</p> | <p>Suspicion can originate from a number of sources including (but not exclusively):</p> <ul style="list-style-type: none"> • a positive residue detection showing contamination with a substance not permitted in organic production (please see standard 5.6.3) • a complaint from a reliable source • you have not been able to verify the organic status of goods you have received (see section 5.7 for further information) • not being able to verify valid certification of a product or supplier. For example, if your supplier's certification has been revoked • knowing that an element of the production did not meet organic standards, for example a prohibited substance has accidentally been applied to your crop or a non-organic ingredient has been used by mistake. <p>You must stop any further sale/use of the product as organic (or in-conversion if applicable) until any doubt over its organic status can be eliminated.</p> <p>You must inform the certification team if you have substantiated suspicion or where you have not been able to eliminate suspicion that the product may not meet organic standards and stop any further sale of the product as organic until any doubt over its organic status can be eliminated.</p> <p>An investigation will be carried out to determine if the product has met organic production rules. Once this has been determined you will be informed if the product can be put back on the market as organic or not.</p> |

| | |
|--|--|
| <p>confirmed, then you no longer have to withhold the product from sale.</p> <p style="text-align: right;"><i>(EC) 2018/848 Art. 27; Art. 41 (1)(2)</i></p> | <p>If you are unsure what action to take, please contact the technical team at sacl.notifications@soilassociation.org.</p> |
| <p>SA NI 1.6.3 Actions to be taken in the case of suspicion of the presence of non-permitted products or substances</p> <ol style="list-style-type: none"> 1. If you suspect that a product does not meet these organic standards due to the presence of a substance not authorised for use in organic production, you must: <ol style="list-style-type: none"> a) identify and separate the product concerned b) check whether the suspicion can be substantiated c) not market the product as organic or in-conversion d) not use the product in organic production e) fully cooperate with Soil Association Certification in identifying and verifying the reasons for the positive residue detection. 2. To check whether the suspicion of a positive residue detection can be substantiated you must take account of the following elements: <ol style="list-style-type: none"> a) where the suspicion concerns an incoming organic or in-conversion product check that the information provided on the label of the product matches the information on the accompanying documents and that the information on the organic certificate provided by the supplier relates to the product purchased b) where there is suspicion that the cause is under the control of your business you must examine any possible cause for the positive residue detection. 3. Where the suspicion has been substantiated or where it cannot be eliminated you must immediately inform Soil Association Certification and provide: | <p>The non-permitted products and substances referred to in this standard can include any product or substance not permitted in these organic standards. Such products and substances not authorised for use in organic production and processing can include but are not limited to:</p> <ul style="list-style-type: none"> • active substances used in plant protection products • pest control products for use in agriculture and storage facilities • fertilisers soil conditioners and nutrients • non-organic feed material of plant, algal, animal or yeast origin or as feed material of microbial or mineral origin • feed additives and processing aids • food additives and processing aids • cleaning and disinfection products • non-organic ingredients not authorised for use in organic products • processing aids for yeasts and yeast products. <p>The presence of non-permitted products or substances also includes and may be referred to as residue detections. Suspicion of contamination must be followed by the procedure outlined in this standard.</p> <p>If you are unsure what action to take, please contact the technical team at sacl.notifications@soilassociation.org.</p> |

| | |
|--|--|
| <p>a) information and documents relating to the supplier (delivery note, invoice, the supplier's organic certification and the Certificate of Inspection (COI) if relevant)</p> <p>b) information relating to the traceability of the product (lot identification or batch number, stock quantity and the quantity of the product already sold)</p> <p>c) the laboratory results, from an accredited laboratory when relevant and available</p> <p>d) the sampling sheet detailing the time, place and method used to take the sample</p> <p>e) any information regarding a previous suspicion or substantiated residue detection for the specific product or substance</p> <p>f) any other relevant documentation that will help clarify the case.</p> <p>4. If your product has a positive residue detection for a substance not authorised for use in organic production Soil Association Certification will carry out an investigation to determine:</p> <p>a) if products or substances not authorised in organic production have been used</p> <p>b) if sufficient precautionary measures have been taken</p> <p>c) if sufficient measures following previous requests from certification body have not been taken.</p> <p>You will be given the opportunity to comment on the investigation and you may be required to take corrective measure to avoid future contamination.</p> <p><i>(EC) 2018/848 Art. 28 (2); Art. 29 (1)(2)(3)(4); (EC) 2021/279 Art. 1 (1)(2)</i></p> | |
|--|--|

| | |
|---|---|
| <p>SA NI 1.6.4 Exceptions Exceptions to certain production rules will only be allowed when explicitly referenced in these standards. Permission must may be granted or confirmed by your certification body or competent authority.</p> <p style="text-align: right;"><i>(EC) 2018/848 Art. 40(4)(b)</i></p> | |
| <p>SA NI 1.6.5 Appeals and complaints We appreciate there may be occasions when you wish to make a formal complaint to us. This could be regarding service, standards, policy, another licensee or an unlicensed company. We have formal complaints and appeals procedures which are available on request. You can make a complaint in writing, by email or by telephone.</p> | <p>If you have a complaint please send details in writing to cert@soilassociation.org or telephone Client Services on 0117 987 4564.</p> <p>If you wish to appeal a certification decision please send full details to the certification team.</p> |
| <p>SA NI 1.6.6 Exceptional production rules due to catastrophic circumstances</p> <ol style="list-style-type: none"> 1. When the competent authority recognises conditions that qualify as a catastrophic event they may grant a derogation against specific production rules. These exceptions will be explicitly referenced in these standards. 2. Derogations shall be offered on an individual basis or across a geographical area depending on the nature of the catastrophic circumstance. 3. Derogations will be granted for: <ol style="list-style-type: none"> a) a limited period and for no longer than 12 months, b) specific types of production and to a specific area 4. Derogations granted for catastrophic circumstances shall not affect the validity of your organic license provided that the specific requirements of the derogation are met. 5. Documentary evidence shall be kept relating to the specific requirement of the derogation. <p style="text-align: right;"><i>(EC) 2018/848 Art. 22(1)(2)</i> <i>(EC) 2020/2146 (1)(2)</i></p> | <p>Your competent authority will recognise a catastrophic event as conditions derived from an 'adverse climatic event', 'animal diseases', an 'environmental incident', a 'natural disaster' or a 'catastrophic event' as well as any comparable situation as defined by EC 1305/2013.</p> <p>In the case of a 'natural disaster' this will be quantified as the loss of 30% of relevant agricultural potential or 20% of the relevant forest potential.</p> <p>In the event of catastrophic circumstances please contact the certification team.</p> |

SA NI 1.7 Record keeping

What is this chapter about?

This chapter details all the records that you will need to keep and have available at your inspection.

| Standards | Guidance |
|---|---|
| <p>SA NI 1.7.1 General record keeping</p> <ol style="list-style-type: none">1. You must have a record keeping system in place which allows you to prove the organic status of your products. Your records need to cover all production stages from everything produced or bought in through to all goods sold or dispatched and must allow you to demonstrate the balance between input and output. They must also allow retrospective traceability.2. You must keep stock and financial records at your unit or premises which make it possible to verify the following information for every product:<ol style="list-style-type: none">a) the suppliers, sellers or exportersb) the nature and quantities of organic products delivered, including where relevant:<ol style="list-style-type: none">i) nature and quantities of all materials bought and the use of such materialsii) the composition of compound feed stuffsc) the nature and quantities of organic products held in storaged) the nature, quantities, and consignees or buyers (other than final consumers) of any products which have left your unit, premises or storage facility.3. If you do not store or physically handle organic products, you will still need to keep records of:<ol style="list-style-type: none">a) the nature and quantities of organic products bought and soldb) the suppliers, and where different, the sellers or the exportersc) the buyers, and where different the consignees. | <p>I Standards 1.7.1 -1.7.3 apply to all licensees. More specific record keeping requirements for agricultural operations follow below.</p> <p>R Your records need to be sufficient for us to be able to carry out successful mass balance (input and output) and traceability exercises at your inspection. You will need to be able to demonstrate that you have bought/received/produced sufficient organic material for the quantity you have sold/dispached.</p> <p>R You need to have a system to keep track of procedures and records to ensure they are correct, up-to-date and effective.</p> <p>R Your records should include:</p> <ul style="list-style-type: none">• checked organic status of goods such as feed, seed and livestock, delivered as per standard 1.14.3• quantities, batch codes and invoices and delivery notes of goods received• evidence that you produced, stored and handled organic and non-organic products separately• evidence that you cleaned according to these standards before production• relevant paperwork to identify any products sold, how much and to whom• annual stock takes if appropriate• any pest control treatments used |

| | |
|--|--|
| <p align="center"><i>(EC) 2018/848 Annex II Part IV(1.5)(d)</i> <i>(EC) 2018/848 Art. 39(1)(a)</i></p> | |
| <p>SA NI 1.7.2 Verifying certification documents</p> <p>1. You must verify the certification documents of your suppliers and check that they:</p> <ul style="list-style-type: none"> a) identify your supplier, b) cover the type or range of products you are purchasing, and c) are valid at the time you are making the purchase. <p>2. You must make a record of these checks.</p> <p align="right"><i>(EC) 2018/848 Art. 35(6)</i></p> | <p>A certification document will be the organic certificate, or in the case of Soil Association Certification licensees this includes the certificate and trading schedule. The name and address on the certificate must match the name and address of your supplier (the company you are purchasing from).</p> <p>You will need to verify certification documents for any supplier of organic products that you are purchasing from. This will include agents or traders who may not handle the product but who do take ownership of it and sell it to you.</p> <p>When you receive goods, you will also need to make the checks detailed in 1.14.3 Tools such as BioC could be used as a way of doing this.</p> <p> Records of verification checks</p> |
| <p>SA NI 1.7.3 Complaints register</p> <p>You must keep a complaint register for your business. This must record:</p> <ul style="list-style-type: none"> a) all complaints you make or receive b) any response to the complaint c) the action taken. <p align="right"><i>(EC) 2018/848 Art. 2(4)(5); Art. 39(1)(a); Art 46(2)(d)</i></p> | <p> Keeping a record of any complaints you receive encourages transparency. It allows businesses to monitor issues and encourages good practice by ensuring there is a documented system for dealing with complaints.</p> |
| <p>SA NI 1.7.4 Specific plant production records</p> <p>You must keep plant production records in the form of a register which is available at all times on the premises of your holding. These records must provide at least the following information:</p> <ul style="list-style-type: none"> a) as regards the use of fertiliser and soil conditioners: date of application, type and amount of fertiliser, crop and parcels concerned; b) as regards the use of pesticides and plant protection products: reason and date of treatment, the name of the product, its active substances, the amount applied, the crop and parcels concerned, and the pest or disease | <p>Refer to section 2.5 for permitted fertilisers and soil conditioners and 2.6 for permitted pesticides and plant protection products.</p> <p> Plant production records</p> |

| | |
|---|--|
| <p>to be controlled;</p> <p>c) as regards purchase of farm inputs: date, type and amount of purchased product; crop and parcels concerned;</p> <p>d) as regards harvest: date, type and amount of organic or in conversion crop production;</p> <p>e) as regards to cleaning and disinfection products: date or dates on which each product was used, the name of the product, its active substances, and the location of such use.</p> <p><i>(EC) 2018/848 Annex II Part I(1.9.3)(1.10.2)(1.11)(1.12)</i></p> | |
| <p>SA NI 1.7.5 Cropping plan</p> <p>Each year, you must provide us with a cropping plan, giving a breakdown by parcel.</p> <p><i>(EC) 2018/848 Art. 39(1)(a)</i></p> | <p> We will send you our Annual Questionnaire form before your annual inspection, where you can record this information.</p> |
| <p>SA NI 1.7.6 General livestock records</p> <p>You must keep livestock records in the form of a register which is available at all times on the premises of your holding. These records must provide a full description of the herd or flock management system comprising of at least the information required in this section.</p> <p><i>(EC) 2018/848 Art. 39(1)(a)</i></p> | <p> Livestock records see standards below for specific requirements</p> |
| <p>SA NI 1.7.7 Livestock movement records</p> <p>1. When you bring animals in you must record:</p> <ol style="list-style-type: none"> species, source, numbers organic status identification mark any quarantine measures taken age veterinary history, and date of arrival dates of conversion. <p>2. When your animals are sold or leave your holding you must record:</p> <ol style="list-style-type: none"> species | <p> At inspection you will be required to show up to date records. These can be in any format. Electronic and printed versions are available from several sources. Government guidance can be found here.</p> <p> Livestock movement records.</p> <p>If you bring in stock reared under simultaneous conversion, you must record all details of their conversion requirements.</p> <p> We can provide Livestock Transfer Documents and Organic Livestock Movement to Slaughter documents which will meet all these requirements. Ask the certification team if you need copies of these.</p> |

| SA NI 1.7.9 Feed records 1. Your feed records must include: <ul style="list-style-type: none"> a) Name and type, such as forage, straights or compound, including supplements b) source of feed c) percentage of each ingredient in the rations d) amount of feed, including the amount of non-organic ingredients fed to each animal or group of animals, e) organic status, such as organic, in-conversion or non-organic. 2. You must record the period when your livestock have access to grazing or exercise areas and, where applicable, periods of transhumance. <i>(EC) 2018/848 Art. 39(1)(a)</i> <i>(EC) 2018/848 Annex II Part II(1.4.4)</i> | |  At inspection provide the feed records in any format for each animal group. This should include copies of feed labels. |
| SA NI 1.7.10 Veterinary records 1. When you use any veterinary medicines you must record: <ul style="list-style-type: none"> a) date the treatment started and ended b) reason for treatment | |  Records of veterinary treatments used Veterinary medicines are products which are used to treat or prevent disease. |

| | |
|--|--|
| <ul style="list-style-type: none"> c) the name and type and batch number of the medicine and its active substance d) method of treatment e) number and identity of animals you treat f) length of the legal withdrawal period in days g) earliest date you can sell the animal or its products as organic h) posology (dosage) i) where appropriate veterinary prescription for veterinary care. <p>2. Whenever veterinary medicines are used the information recorded must be declared to your certification body or control authority before the livestock or livestock products are marketed as organic.</p> <p><i>(EC) 2018/848 Annex II Part II (1.4.4)(1.5.2.7)</i></p> | <p>Examples of veterinary medicines include antibiotics, vaccinations, parasite treatments, minerals and vitamins, herbal and homeopathic products.</p> <p>There are additional statutory record keeping requirements for veterinary medicines. Government guidance can be found here.</p> <p>You must keep records of any additional instructions given to you by the vet relating to the care of the animals under treatment</p> |
| <p>SA NI 1.7.11 Identification of livestock</p> <p>You must identify your livestock at all stages of their production, preparation, transport and marketing using techniques adapted to each species. This must be done individually in the case of large mammals and individually or by batch in the case of poultry and small mammals.</p> <p><i>(EC) 2018/848 Annex II Part II(1.3.4.5)(1.3.4.4.5)</i></p> | <p>The methods you use to identify your livestock must meet the legal requirements of country. In NI you must follow NICA requirements.</p> |

SA NI 1.8 General labelling

What's this chapter about?

This section contains the labelling standards which need to be met if you wish to label your product as organic.

Standards

SA NI 1.8.1 Using the term organic

If you wish to refer to organic in relation to products referred to in standard 5.1.1 anywhere on a label, in advertising materials or commercial documents, you must meet the requirements of these standards.

Terms and their derivatives listed in Annex IV, whether alone or in combination (including terms used in the EU to describe organic products – see guidance), may be used throughout the European Union and in any language listed.

(EC) 2018/848 Art. 2
(EC) 2018/848 Art. 30(1)

Guidance

Labelling refers to the way in which you identify your products and show their organic status. The labelling standards apply to:

- retail packaging
- bulk packaging
- the labelling of loose produce for sale in retail outlets
- information on delivery notes or invoices for products that are packed or labelled before sale, such as milk, livestock and grain
- marketing materials, and
- web content.

This includes reference to organic not just in the product name or sales description, but also in relation to ingredients of a food or feed product. For example, a cereal bar making organic claims about some of the ingredients may only do so if the cereal bar is certified to the organic regulation. This only applies to food and feed products. However, if you make such claims on non-food and feed products (such as textiles, health and beauty products, and pet food) your claims must still be true. In the UK all products are governed by the *Trade Descriptions Act*.

Examples of other references to organic include, "organically grown"; "organically produced"; "grown/produced using organic principles"; "grown/produced using organic methods".

If you sell organic products and non-organic products, any use of the word organic, or organic logos (certifier logos such as the SA Symbol, or the EU Organic logo), must be clear and unambiguous as to which products they apply. Use of references to organic or logos on email footers, invoices, websites **should be accompanied by an explanatory wording e.g. "We have a range of organic products, see our product listings for more details", and within the product listing a clear identification of products.** For contract

manufacturers/packers wording describing the certified service offered should be included e.g. **"We offer certified packing of organic products"**.

If your company name includes the word organic you may not use this on the labels of non-organic products - e.g. labels of non-organic products sold by **'XXX Organic Farm'** could replace their branding with **'XXX Farm'**. **On websites and marketing materials 'XXX Organic Farm' can be used provide it is clear and unambiguous to buyers which products are organic and which are not.**

Labelling legislation

Along with meeting these standards for labelling, you will also need to make sure your labels meet other relevant labelling legislation such as *Regulation 1169/2011* on the provision of food information to consumers, and the *Food Information Regulations*.

List of terms for organic (annex IV of (EC) 2018/848)

BG: б и о л о г и ч е н .

SA NI 1.8.2 Products with 95%-100% organic ingredients

Food products containing 95%-100% organic agricultural ingredients can be labelled as organic provided that they meet the composition requirements in standard 6.3.1 (Food and Drink) and the labelling includes the following:

- An indication of which ingredients are organic in the ingredients list.
- The EU organic logo must be used on pre-packaged food.
- When the EU logo is used, an indication of where the ingredients were farmed or grown (see standard 1.8.8).
- The code of the certifier who certifies the company that applies the labels (which may or may not be you). This must appear in the same visual field as the EU organic logo if the EU logo is used.
- A traceability code, such as a batch or date code.
- The EU logo, statement of agricultural origin and code of the certifier must be marked in a conspicuous place in such a way as to be easily visible, clearly legible and indelible.

(EC) 2018/848 Art. 30(5)
(EC) 2018/848 Art. 32(1)(2)(a)(b)(c)
(EC) 2018/848 Art. 33(1)(3)(5)
(EC) 2018/848 Annex III(2.1.1)d)
(EC) 2018/848 Annex XI
(EC) 2021/279 Art. 3

Guidance is set out below:

a) Identifying organic ingredients

If any non-organic ingredients are used, make a clear indication on the ingredients panel as to the organic status of each ingredient. This includes water and salt as these are non-organic.

For example:

Ingredients: Organic Flour (fortified with calcium carbonate, iron, niacin, thiamin), Water, Organic Eggs, Organic Sunflower seeds, Yeast, Salt.

Or, Ingredients: Flour (fortified with calcium carbonate*, iron*, niacin*, thiamin*), Water*, Eggs, Sunflower seeds, Yeast*, Salt*. *Non-organic.

b) Using the EU logo

The EU sets the rules for the use of the EU leaf logo. Its use is optional on foods imported from outside the EU. It cannot be used on non-food products. See EU logo standard (SA NI 1.8.7) for details.

c) Statement of agricultural origin

d) **See standard 'declaring ingredient origin'** (1.8.8) for details.

e) Certifier code

| | |
|--|--|
| | <p>Each certification body has its own code, which its operators need to use on pack. The code for Soil Association Certification in Northern Ireland is XI-ORG-05. If you are packing, processing and/or labelling the product yourself, or a Soil Association certified company in Northern Ireland is doing this on your behalf, this is the code which must be used.</p> <p>The code for Soil Association Certification in GB is GB-ORG-05, this is different from the code used in Northern Ireland, so businesses Soil Association Certification license in GB use the code GB-ORG-05.</p> <p>However, if you use another company to apply packaging or labels to your product(s), you need to use the code of their certification body on pack, even if the product carries the Soil Association symbol. For example, if you are using a French contract packer certified by Ecocert, use the Ecocert code FR-BIO-01, do not use XI-ORG-05. The certification code of your subcontractor is usually featured on their organic certificate.</p> <p>If your product is labelled outside the UK or EU and you are not using the EU logo then you do not have to use the certifier's code, but you must include the name of the certifier.</p> <p>If you are in any doubt as to what certifier code you should use on your labels please do contact the certification team for guidance.</p> <p>Labels of non-food products, such as textiles and health and beauty care, or medicinal products must not include the code of the certifier. This is because they fall outside the scope of the EU Organic Regulation.</p> <p>f) Traceability code</p> <p>Your labelling must include a traceability code. Please refer to the record keeping section 1.7 for details.</p> <p>Labelling requirements for box schemes SA NI:</p> |
|--|--|

| | |
|--|--|
| | <p>Certification code (XI-ORG-05) and Soil Association symbol must either be on the box or accompanying paperwork. The box scheme contents should also be detailed.</p> <p>If the box scheme does not provide paperwork with the box, or label the box, it is acceptable for the information to be sent via e-mail, on the website or other social media.</p> <p>For certification in NI the EU logo is only required for pre-packed product so is not applicable for box schemes.</p> |
|--|--|

| Standards | Guidance |
|---|---|
| <p>SA NI 1.8.3 Identifying non-organic ingredients of ingredients</p> <p>a) Your ingredients list must identify any non-organic ingredients of ingredients, unless exempted – as outlined in the guidance.</p> <p><i>Soil Association higher standard</i></p> | <p>You must list any non-organic ingredients of ingredients. For compound ingredients you can either list the individual non-organic ingredient in the compound ingredient, or use a generic description such as 'contains a non-organic ingredient'.</p> <p>If you are using an organic flavouring in a product, you do not need to list the non-organic components of the organic flavouring, provided the non-organic components account for less than 1% of the final product.</p> |
| <p>Why?</p> <p>The EU Organic Regulation doesn't require non-organic ingredients of ingredients to be declared on labels. Soil Association believes that transparency is important to consumers and can help to drive positive change, so Soil Association standards require any non-organic ingredients of ingredients to be declared on the label.</p> | |
| Standards | Guidance |
| <p>SA NI 1.8.4 Using the Soil Association symbol</p> <p>4. You must use the Soil Association symbol on the packaging of Soil Association certified products which contain 95%-100% organic ingredients, except where there is a good reason for not doing so.</p> <p>5. You must not use the Soil Association symbol on products containing less than 95% organic ingredients.</p> | <p>Examples of exceptions where you would not have to use the Soil Association symbol are:</p> <ul style="list-style-type: none"> • where the label is so small that it would jeopardise other information required by law • for products which are only sold outside the UK • where your labelling machine cannot include the symbol and you cannot apply the symbol in another way |

| <p>6. You must not use the Soil Association symbol on in-conversion products.</p> <p style="text-align: right;"><i>Soil Association higher standard</i></p> | <ul style="list-style-type: none"> • where you are acting as a sub-contractor to a brandholder who is licensed with a different organic certification body and the brandholder doesn't want you to use it, and • where the symbol has not been used on a brand since July 2008 <p>For in-conversion products you could use the wording 'Soil Association approved organic conversion'.</p> | | | | | | | | | | |
|---|--|----------|-----|------------------|-----|-------------------|-----|---------------|----|-------------------|-----|
| <p style="text-align: center;"><i>Why?</i></p> <p>Use of the Soil Association symbol on products that cannot be called organic could be confusing and has the potential to mislead consumers.</p> | | | | | | | | | | | |
| Standards | Guidance | | | | | | | | | | |
| <p>SA NI 1.8.5 Products with less than 95% organic ingredients</p> <ol style="list-style-type: none"> 1. For products where less than 95% of the agricultural ingredients are organic you can only include reference to organic in the ingredients list. In order to do this you must: <ol style="list-style-type: none"> a) indicate which ingredients are organic in the ingredients list. b) include the total percentage of organic ingredients in the ingredients list (as a percentage of the agricultural ingredients). c) use the same colour, size and style of lettering in the reference to organic and percentage statement as you do as for the non-organic ingredients. 2. For products where the main ingredient is a product of hunting or fishing you may make reference to organic in the sales description and in the list of ingredients provided that you <ol style="list-style-type: none"> a) indicate which ingredients are organic in the ingredients list b) ensure any reference to organic in the sales description is clearly related to the organic ingredients and not the product of hunting or fishing c) all other agricultural ingredients are organic d) include the total percentage of organic ingredients in the | <p>Guidance for each point is set out below:</p> <ol style="list-style-type: none"> 1. Less than 95% organic bulk labels <p>For bulk products which do not include the ingredient information on the label, indicate the total percentage of organic ingredients on the product label instead.</p> <p>Your labelling must not infer the product is organic. Any references to organic must clearly be only be in relation to the organic ingredients.</p> <ol style="list-style-type: none"> 2. Main ingredient of hunting and fishing <p>The 'main ingredient' means it accounts for at least 50% agricultural ingredients or is the characterising ingredient. Added water and salt are not taken into account.</p> <p>Products of hunting and fishing are considered agricultural ingredients so are included in percentage calculations.</p> <p>For example, Sardines in tomato sauce:</p> <table> <tr> <td>Sardines</td><td>52%</td></tr> <tr> <td>Organic tomatoes</td><td>32%</td></tr> <tr> <td>Organic olive oil</td><td>11%</td></tr> <tr> <td>Organic lemon</td><td>5%</td></tr> <tr> <td>Organic content =</td><td>48%</td></tr> </table> | Sardines | 52% | Organic tomatoes | 32% | Organic olive oil | 11% | Organic lemon | 5% | Organic content = | 48% |
| Sardines | 52% | | | | | | | | | | |
| Organic tomatoes | 32% | | | | | | | | | | |
| Organic olive oil | 11% | | | | | | | | | | |
| Organic lemon | 5% | | | | | | | | | | |
| Organic content = | 48% | | | | | | | | | | |

| <p>ingredients list (as a percentage of the total quantity of agricultural ingredients)</p> <p>e) in the list of ingredients use the same colour, size and style of lettering in the reference to organic and percentage statement as you do for the non-organic ingredients.</p> <p>f) meet all of other processed food requirements as detailed in out processed food standards.</p> <p>3. You must not use the EU logo on products covered under points 1 and 2 above.</p> <p>4. The label must include the code number of the certifier who certifies the company that carries out the most recent production, preparation or packing for the product (which may or may not be you).</p> <p>5. You must include a traceability code, such as a batch or date code.</p> <p>(EC) 2018/848 Art. 30(5) (EC) 2018/848 Art. 32(1)(2)(a) (EC) 2018/848 Art. 33(1) (EC) 2018/848 Annex III(2.1.1)d)</p> | <p>The label will indicate total organic content of 48%.</p> <p>3. This table provides a summary of the main differences in labelling requirements for products containing more than 95% and less than 95% organic agricultural ingredients, and in-conversion products.</p> <table><tr><th>% organic agricultural ingredients</th><th>References to organic</th><th>Soil Association Organic logo</th><th>EU Organic logo (optional unless in NI)</th><th>Certification code</th><th>Statement of agricultural origin</th></tr><tr><td>More than 95%</td><td>✓</td><td>✓</td><td>✓</td><td>✓</td><td>✓</td></tr><tr><td>Less than 95%</td><td>Only in ingredient list</td><td>✗</td><td>✗</td><td>✓</td><td>✗</td></tr><tr><td>In-conversion product</td><td>You may use the wording 'product under conversion to organic farming'</td><td>✗ You may use the wording 'Soil Association approved organic conversion'</td><td>✗</td><td>✓</td><td>✗</td></tr></table> | | | | | | % organic agricultural ingredients | References to organic | Soil Association Organic logo | EU Organic logo (optional unless in NI) | Certification code | Statement of agricultural origin | More than 95% | ✓ | ✓ | ✓ | ✓ | ✓ | Less than 95% | Only in ingredient list | ✗ | ✗ | ✓ | ✗ | In-conversion product | You may use the wording 'product under conversion to organic farming' | ✗ You may use the wording 'Soil Association approved organic conversion' | ✗ | ✓ | ✗ |

| <p>SA NI 1.8.6 In-conversion products</p> <p>1. To label your product as 'in-conversion' or use a similar term, the product must:</p> <p>a) have been grown on land that has gone through at least a 12 month conversion period before the crop was harvested</p> <p>b) contain only one agricultural ingredient, which must be of plant origin, either processed or unprocessed</p> <p>c) meet all of other processed food requirements as detailed in out processed food standards.</p> <p>d) Ensure any reference to 'in-conversion' is not more prominent in colour, size and style of lettering than the sales description of the product.</p> | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

2. Include the certifier code in the same visual field as the reference to in-conversion.
3. You must **not** use the EU logo on in-conversion products.
(EC) 2018/848 Art. 10(4)(b); Art. 16(1); Art. 33 (1)
(EC) 2020/464 Art. 23
(EC) 2021/279 Art.3(1)(a)(b)

SA NI 1.8.7 Using the EU organic logo

1. You must display the EU logo on labels of packaged organic products produced in Northern Ireland or the EU.
2. Use of the EU logo is optional on product labelled in a third country.
3. The EU logo is published for use in green as shown below.
 The reference for single colour printing is Pantone 376, or if you print using four colour process, 50% cyan, 100% yellow.

4. Where colour is not possible you may use black and white.

The use of the logo is mandatory for all organic pre-packaged food produced within Northern Ireland or the European Union. The terms of its use are set by the EU and more information can be found [online](#).

You can download the EU logo in various formats from [here](#).

The white EU logo with the black stars is designed to be used on a dark background only. When the EU logo is used it must appear within a box or a black outline.

If your product is being packed outside the EU, you do not need to apply the EU logo. However, due to the widespread recognition of the EU logo across Europe you may wish to apply it if the products are destined for the EU market.

Products without packaging do not need to display the EU logo (see standard 1.14.2 for details of what you need to include).

5. The EU organic logo must:
 - a) appear at least 9mm high and 13.5mm wide, or
 - b) appear 6mm high for very small packages, and
 - c) have a proportional height to width ratio of 1:1.5
6. The EU organic logo may appear:
 - a) in negative, if the background of your packaging is dark.
 - b) in the single colour of your packaging if you are only able to print one colour.
 - c) with an outer line around it to improve how it stands out on coloured backgrounds.
 - d) in conjunction with other logos and text referring to organic, providing this does not overlap, obscure or change the logo.
7. The organic production logo of the European Union shall not be used in the labelling, the presentation or the advertising of products originating from mass catering, and shall not be used to advertise the mass caterer.

(EC) 2018/848 Art. 2 (3)
(EC) 2018/848 Art. 32(1)(2)(3)
(EC) 2018/848 Art.33

SA NI 1.8.8 Declaring ingredient origin

1. When the EU logo is used you must also include a declaration in relation to the EU - **'EU agriculture', 'non-EU agriculture', or 'EU/non-EU agriculture'**. This must appear:
 - a) in the same visual field as the EU organic logo;

Pre-packed products for export only and not for sale on the EU market do not have to use the EU Leaf logo. However, operators must have measures in place to ensure the product cannot be placed on the EU market.

For product pre-packed in the EU, or Northern Ireland, but placed on third country markets the use of the EU logo is optional.

If the EU logo is used the declaration needs to be in the same visual field as the EU [logo](#).

| | |
|---|---|
| <p>b) immediately below the certifier code, and c) no more prominent than the sales description.</p> <p>2. The word 'Agriculture' may be replaced by 'Aquaculture' where appropriate.</p> <p style="text-align: right;"><i>(EC) 2018/848 Art. 32(1)(2)</i> <i>(EC) 2021/279 Art. 3(3)</i></p> | |
| <p>3. You can replace 'EU' or 'non-EU' with a particular country if all ingredients were farmed or grown there. In this case only one declaration is required. You do not have to count small amounts of ingredients up to a total of 2% of the agricultural ingredients.</p> <p style="text-align: right;"><i>Soil Association higher standard</i></p> | <p>If the product contains 98% ingredients grown in a particular country it can be labelled as that specific country. For example, lamb produced in Wales could be labelled as Welsh Agriculture.</p> |
| <p style="text-align: center;">Why?</p> <p>These standards comply with European Commission organic regulation 2018/848, which has replaced regulations 834/2007 and 889/2008. The Soil Association has identified this standard as an area where the new regulation is less strict, therefore the requirement will be kept at the same level as the previous regulation and marked as a Soil Association higher standard. This standard will undergo a review process in 2023 to determine whether it should be brought into line with 2018/848, or should remain a higher standard.</p> | |

| Standards | Guidance |
|--|---|
| <p>SA NI 1.8.9 Percentage for naming a specific country when declaring ingredient origin</p> <ol style="list-style-type: none"> 1. You can replace 'EU' or 'non-EU' with a particular country if all ingredients were farmed or grown there. In this case only one declaration is required. You do not have to count small amounts of ingredients up to a total of 2% of the agricultural ingredients. <p><i>Soil Association higher standard</i></p> | <p>If the product contains 98% ingredients grown in a particular country, it can be labelled as that specific country. For contract manufacturers/packers wording describing the certified service offered should be included, e.g. "We offer packing of products certified to Soil Association standards".</p> <p data-bbox="965 1299 2119 1364">You can download the symbol pack directly from our website. We also have the symbol available for use in Welsh and Gaelic.</p> |

Why?

The Soil Association symbol should only be used in relation to products or enterprises certified to Soil Association standards to avoid misleading consumers.

SA NI 1.9 Making claims on your labels

What is this chapter about?

The standards in this section outline the requirements relating to certain labelling claims. As well as meeting the requirements of these standards, you will need to make sure your products meet all statutory labelling legislation.

Standards

SA NI 1.9.1 Using accurate descriptions

1. References to organic production, as described in standard 1.8.1 can only be used to describe products (in labels, advertising and commercial documents on products) that meet the requirements of these standards, unless the term is not being used in relation to agricultural products in food or feed which fall under the scope of these standards.
2. You must **not** use any terms, including terms used in trademarks, company names and practices, labels, or advertising, that could mislead consumers into believing products are organic when they are not.
(EC) 2018/848 Art.30(2)

Guidance

Your sales description and product name will need to accurately describe your **product. You can't use the word organic, even if it is part of your company trade name, in relation to non-organic products (e.g. on labels). Refer to standard 1.8.1 for further details.**

Substantiating claims

You will need to be able to substantiate any claims that you make on your labels. For example:

You should not use phrases such as 'GMO free' unless you can prove this, if challenged. Instead you could use:

- 'organic standards prohibit the use of GM materials', or
- 'non-GM'.

You should not use phrases such as 'pesticide free' unless you can prove this, if challenged. Instead you could use:

- 'Less pesticides, or
- 'Organic farming uses virtually no pesticides, or
- 'No system of farming has lower pesticide use'

We worked closely with the Advertising Standards Authority to draw up a document of approved advertising claims you can make when selling organic. You can find a copy on our [website](#).

Labelling claims

| | |
|--|--|
| | <p>Food labelling legislation is harmonised at an EU level. In England, responsibility for food labelling legislation and policy is split across Defra, the Food Standards Agency (FSA) and the Department of Health (DH). For Scotland, Wales and Northern Ireland all domestic standards legislation is the responsibility of the FSA. Visit this website for details.</p> |

| Standards | Guidance |
| <p>SA NI 1.10.1 Labelling requirements for licensees (including retailers, farm shops and farmers' market stalls) selling direct to consumers</p> <p>You must display your certificate of registration in a way that is clearly visible to your customers. If only some of your products are organic or if your organic supply is sporadic, you also need to provide additional information so that it is clear which products or produce the organic certificate refers to.</p> <p><i>Soil Association higher standard</i></p> | <p>In order to make it clear which products your organic certificate relates to, you could also display your trading schedule which lists all the products you are certified to sell. If your organic supply is sporadic, or if the certificate only relates to some items that you are selling, you could add an explanatory note making it clear which products the certificate relates to, and how these are indicated.</p> <p>Display the certificate in a sensible location in store. For example, if your store is only licensed to cover the loose fruit and vegetables you sell, then put the certificate near the produce.</p> <p>Online retailers do not have to include their certificate of registration on their website, but they must indicate which products are covered by their Soil Association organic certification. Refer to use of Soil Association symbol in standard 1.8.8.</p> |
| <p style="text-align: center;">Why?</p> <p>This standard helps to avoid misleading consumers by making it clear which products on sale are organic.</p> | |
| <p>SA NI 1.10.2 Stamping eggshells and meat</p> <p>You must only use colours in accordance with Article 17 of Regulation (EC) No 1333/2008 for stamping meat and eggshells.</p> <p><i>(EC) 2018/848 Annex II Part IV (2.2.2)(c)</i></p> | <p>Egg stamps</p> <p>Even if you stamp your eggs with the egg markings, you still need to label the egg boxes in accordance with the general organic labelling standards.</p> <p>You can find more information on egg marking on the Defra website.</p> <p>Meat stamps</p> <p>Please refer to the abattoir standards on our website for full details of meat stamp requirements including details of the records which must be kept.</p> |

SA NI 1.11 Preserving organic integrity

What is the chapter about?

The standards in this section cover which substances are prohibited and what you need to do to prevent contamination.

Standards

SA NI 1.11.1 Reducing the risk of contamination

1. In order to avoid contamination with products or substances that are not authorised for use in organic production, you must take the following precautionary measures:

- a) put in place and maintain measures that are proportionate and appropriate to identify the risks of contamination of organic production and products with non-authorised products or substances, including systematic identification of critical procedural steps;
- b) put in place and maintain measures that are proportionate and appropriate to avoid risks of contamination of organic production and products with non-authorised products or substances;
- c) regularly review and adjust such measures;
- d) document the risks identified and the measures you put in place, and
- e) comply with other relevant requirements of these standards that ensure the separation of organic, in-conversion and non-organic products.

(EC) 2018/848 Art 28(1)

(EC) 2018/848 Annex II Part IV (1.2)(1.4)

Guidance

You must consider what you do to reduce the risk of contamination at all stages of production, including processing, storage and transport, including how you determine that the measures you have in place are sufficient and how you monitor that they remain effective. You could use details of any sampling and testing that you carry out.

Examples of risks include:

Environmental

- Spray drift or environmental contamination from inputs used on near-by non-organic crops.
- Contamination from nearby non-organic, or historically treated, processing or storage areas.
- Cross pollination or physical contamination from GM crops and seeds either growing nearby or previously grown nearby or on the now organic land.
- Heavy metal contamination in the soil.

Management

- Insufficient separation, clean down or procedures when carrying out non-dedicated production including equipment, processing, storage, packaging and transport.
- Cleaning materials insufficiently rinsed off product contact surfaces
- Ineffective identification of organic and non-organic products at all times.
- Insufficient staff training and ongoing management to ensure procedures are being followed correctly.
- Products that may be in contact with crops.
- Insufficient pest management.

Risk products

- Chemical or GM contamination from non-organic inputs (e.g. manure, feed, minerals, pesticides, fertilisers).

| | |
|--|---|
| | <ul style="list-style-type: none"> Using risk ingredients – they may be a risk depending on what they are or where they come from. For example, some ingredients like maize and soya from countries like USA, Brazil, Argentina and Canada have a higher risk of being contaminated by GMOs. <p>If you use non-organic manure send us a completed GMO declaration form and we may request labels of feed fed to the animals producing the manure at inspection. Where PCR testing is used to determine that measures are effective at preventing GMO contamination the test must be carried out to the limit of detection of 0.1%.</p> <p>Where pesticide residue testing is carried out we recommend it is carried out by a laboratory accredited to the ISO 17025 standard. If possible, the actual test method should also be accredited to ISO 17025 or equivalent</p> <p>Staff training is an important way to ensure that risk of contamination is minimised. You should ensure that all staff are adequately trained and deemed competent to meet organic requirements and your own operational procedures. This will need to be repeated whenever changes are made. Training records and staff reviews may be reviewed at inspection to verify this.</p> |
| <p>SA NI 1.11.2 Genetic modification</p> <ol style="list-style-type: none"> If a product contains GMOs, consists of GMOs or is produced from GMOs it must not be labelled or advertised with reference to organic production. GMOs, products produced from GMOs, and products produced by GMOs shall not be used in food or feed, or as food, feed, processing aids, plant protection products, fertilisers, soil conditioners, plant reproductive material, micro-organisms or animals in organic production You must be able to demonstrate the above. For food and feed products in the EU, Directive 2001/18/EC, Regulation (EC) 1829/2003 or Regulation (EC) 1830/2003 are applicable, and you may rely on labels or any other accompanying documents to confirm that they are non-GM, unless you have other information that the | <p>In the EU, if a product contains GMOs or their derivatives then it must be labelled as such, (as described in 1.11.2.3) so the regulation allows labels to be relied upon as evidence to indicate whether food contains GMOs or their derivatives. This would apply to products such as agricultural crops, like maize and soya, or their derivatives like lecithin or starch. However, Directive 2001/18/EC, Regulation (EC) 1829/2003 and Regulation (EC) 1830/2003 do not extend to the use of ingredients produced by genetically modified micro-organisms. For example, enzymes and vitamins. This means that it cannot be automatically assumed that a product complies with the specific GMO requirements of the organic regulations. For this reason, we require a completed GMO declaration for all products that may be a GM risk.</p> <p>Our GMO declaration form explains which additives, processing aids and ingredients are GMO risks. The certification team can also confirm any other ingredients which are a GMO risk.</p> |

| | |
|--|---|
| <p>products do not meet the Directive and Regulations listed above.</p> <p>4. For products that are not food or feed, or products that could be produced by GMOs or for products we are certifying outside the EU, you will need to get confirmation from your suppliers, in the form of a non-GM declaration, that the products supplied have not been produced from or by GMOs.</p> <p style="text-align: right;"><i>(EC) 2018/848 Art. 11</i></p> | <p>There is a specific form to be used for licensees producing products under a Soil Association Standards license and a separate form to use for licenses producing product under an EU-only licence. This is because the Soil Association has additional requirements in this area, as outlined in 1.11.2.5.</p> <p>Please contact us if you need a blank template of the non-GM declaration form for your suppliers to complete.</p> |
| <p>5. For Soil Association products and ingredients you will need to provide additional information to demonstrate their non-GM status.</p> <p style="text-align: right;"><i>Soil Association higher standard</i></p> | <p>Please note: The GMO declaration expires 12 months from the date signed. Supporting information must be dated within 12 months of sending to SA Certification. If older than 12 months, you must check with the supplier that the statement is still valid and provide evidence of this to SA Certification. An updated GMO declaration is not required if you have not re-ordered the product since originally submitting evidence.</p> <p>1.11.2.3 also says, if you have other information that the products do not meet the GM labelling requirements then you cannot rely on the information stated on the label. For example, test results which show GM DNA in the product. If you or a third party tests any of your organic products and gets a positive result, you must inform us of that result as soon as possible.</p> <p>Farmers purchasing animal feeds may rely on the information provided on the labels, or accompany documents. Feed used must be certified organic so any checks on GM status will have been done by the feed processors.</p> <p>As part of due diligence and controlling risks, operators who import/process/trade GM risk organic ingredients may wish to carry out testing for GMOs. For example, soya or maize products. Testing should be to 0.1% or lower* and not just to 0.9%.</p> <p>* Some laboratories can provide testing to a limit of quantification (LOQ) below 0.1%. Please refer to standard 5.6.2 for action to take if you detect GMO's in an organic product, or organic ingredient.</p> |

| | |
|---|---|
| | <p>The European regulations and directives referred to in the standard only apply to product within the EU market. This means that if we are certifying your business outside the UK/EU, supplier declarations will be required for all GM risk ingredients and feed to confirm the products have not been produced from or by GMOs.</p> |
| <p style="text-align: center;">Why?</p> <p>GM ingredients have no place in organic food. In order to provide additional assurance that Soil Association certified products and ingredients do not contain GM, we require suppliers of risk products and ingredients to provide additional verification to prove their non-GM status.</p> | |
| <p>SA NI 1.11.3 Nanoparticles</p> <p>1. Organic food must not contain or consist of engineered nanoparticles.</p> <p style="text-align: right;"><i>(EC) 2018/848 Art. 3(63)</i> <i>(EC) 2018/848 Art. 7 (e)</i></p> | <p>The definition of engineered nanomaterial, as stated in (EC) 2015/2283 is as follows:</p> <p>'engineered nanomaterial' means any intentionally produced material that has one or more dimensions of the order of 100 nm or less or that is composed of discrete functional parts, either internally or at the surface, many of which have one or more dimensions of the order of 100 nm or less, including structures, agglomerates or aggregates, which may have a size above the order of 100 nm but retain properties that are characteristic of the nanoscale.</p> <p>Properties that are characteristic of the nanoscale include:</p> <p>(i) those related to the large specific surface area of the materials considered; and/or</p> <p>(ii) specific physico-chemical properties that are different from those of the non-nanoform of the same material.</p> <p>Examples of products that we know may contain manufactured nanoparticles and that are commercially available include titanium dioxide and zinc oxide used in health and beauty products. The manufactured nanoparticle versions of these products are transparent.</p> |
| <p>SA NI 1.11.4 Nanoparticles in organic products</p> <p>1. In addition to standard 1.11.3, all other organic products (including feed) within the scope of these standards must not contain engineered nanoparticles.</p> <p>2. This standard does not apply to incidental nanoparticles.</p> <p style="text-align: right;"><i>Soil Association higher standard</i></p> | <p>The definition of engineered nanomaterial, as stated in (EC) 2015/2283 is as follows:</p> <p>'engineered nanomaterial' means any intentionally produced material that has one or more dimensions of the order of 100 nm or less or that is composed of discrete functional parts, either internally or at the surface, many of which have one or more dimensions of the order of 100 nm or less, including structures, agglomerates or aggregates, which may have a size above the order of 100 nm but retain properties that are characteristic of the nanoscale.</p> |

| | |
|--|---|
| | <p>Properties that are characteristic of the nanoscale include:</p> <p>(i) those related to the large specific surface area of the materials considered; and/or</p> <p>(ii) specific physico-chemical properties that are different from those of the non-nanoform of the same material.</p> <p>Examples of products that we know may contain manufactured nanoparticles and that are commercially available include titanium dioxide and zinc oxide used in health and beauty products. The manufactured nanoparticle versions of these products are transparent.</p> <p>Incidental nanoparticles not prohibited by this standard include:</p> <ul style="list-style-type: none">• Substances that are incidental by-products of other manufacturing processes (such as milling or homogenisation).• Naturally occurring nanoparticles, for example, from volcanic eruptions, in wood smoke or sea spray. |
| <p>Why?</p> <p>Nanomaterials may introduce new or heightened risks of toxicity, which are currently little understood. The possible effects of these nanomaterials on the environment, human and animal health are currently unknown.</p> <p>Nanotechnology involves the manipulation of materials and the creation of structures and systems at the scale of atoms and molecules. This can be either through simple physical processes or by specific engineering.</p> <p>Nanomaterials include:</p> <ul style="list-style-type: none">• nanoparticles and nanoemulsions• nanostructures including nanocapsules, nanotubes, fullerenes (buckyballs), quantum dots and nanowires. <p>The properties of nanomaterials can differ significantly from those at larger scales because quantum effects start to occur at the nanoscale. These differences may be in chemical reactivity and biological activity, solubility and mobility, colour and transparency, among others.</p> <p>These are examples of known and developing uses of nanotechnology:</p> <ul style="list-style-type: none">• food additives, such as for flavouring, enhanced absorption of nutrients or modifying texture• in health and beauty products, such as in transparent mineral sunscreens and make-up products• in packaging, including quantum dots for traceability, UV light filters, nanoclays as gas barriers and carbon nanotubes to alter strength-to-weight ratio | |

- medicinal, such as drug delivery, DNA vaccines and advanced therapies
- environmental, such as soil remediation
- pesticides, such as pesticide delivery in nanoemulsions, and
- textiles, such as stain and water resistant coatings.

SA NI 1.12 Cleaning

What is this chapter about?

The standards in this section which cleaning products and measures are permitted for different organic activities in order to minimise the use of chemical substances and risk of contamination.

Standards

SA NI 1.12.1 Cleaning measures

1. You must have suitable cleaning measures in place to avoid contamination and maintain the integrity of your products throughout production, processing and storage.
2. You must monitor your cleaning measures to make sure they are effective, adjusting measures where appropriate, and keep records to show that you have done this.
3. If you process or store both non-organic and organic at the same site, you must ensure organic processing or storage is only carried out once suitable cleaning of the equipment and/or storage area(s) has been carried out.

(EC) 2018/848 Art.28

(EC) 2018/848 Annex II Part IV (1.2)(1.4)(1.5)

(EC) 2018/848 Annex III 4(c)

Guidance

For farms this would include cleaning of harvesting or handling equipment, crates and boxes used to store organic produce, grain silos, use in dairies and fruit and vegetable packing areas.

For cleaning chemicals permitted in livestock housing refer to standard 1.12.2 and for aquaculture facilities please refer to the aquaculture standards.

You will need to demonstrate at inspection that your cleaning procedures are appropriate and effective. We will look at how you clean harvesting/handling equipment, storage areas and equipment used for organic production, and how you limit the risk of contamination of organic product from microbial contaminants, from cleaning chemicals, non-permitted substances and from non-organic product.

You will need to ensure your staff, or contractors using their own equipment, are trained to carry out effective cleaning to prevent contamination of your organic products.

Your cleaning procedures need to be clear and need to set out what will be cleaned, how, with what frequency (e.g. daily, weekly, monthly or annually), who is responsible, what chemicals and equipment needs to be used and details of the final rinse of food contact surfaces with potable water (where appropriate).

Records of cleaning measures

Cleaning chemicals

Detergents, disinfectants, sterilants and sanitisers allowed for use in the food industry may be used for cleaning equipment and storage areas. Residues of these chemicals must be removed from surfaces in contact with organic food so that they do not contaminate organic products.

Sanitizers containing quaternary ammonium compounds or QACs/QUATs, such as Benzalkonium Chloride (BAC) or Didecyl Dimethyl Ammonium Chloride (DDAC) are difficult to remove from surfaces, and if not adequately rinsed will result in residues in the organic product. Brand names include Deosan, Detsan, Foamsan and Quatsan.

If you use these to clean harvesting/handling equipment, storage boxes, dairy equipment or work surfaces, which are in direct contact with organic products, you need to take measures to ensure they are not contaminating your organic product. For example:

- Switch to a cleaning product that does not contain QACs or other substances difficult to rinse and likely to contaminate products that come in contact with them.
- Check whether your rinsing procedures are sufficient by testing food contact surfaces to ensure no residues remain. For example, a cold water rinse may not be sufficient to remove residues.

A list of products for cleaning and disinfection substances and products will be made available in 2026.

Non-dedicated equipment

Where non-dedicated equipment or storage is used you must be able to demonstrate that the cleaning carried out before it is used for organic products is effective. This may require sampling or swabbing for analysis to demonstrate that the procedures you have in place are effective.

Sprayers

If you use a non-dedicated sprayer on farm, including any contract sprayers, you will need to demonstrate that the cleaning procedures you have in place eliminate residues of any non-permitted substances to prevent contamination. The normal three rinse procedure may not be effective for many substances.

Even if you do not produce organic, for example, if you just wholesale or transport, cleaning is still important to minimise the risk of contamination. For example, loading equipment and vehicles need to be cleaned and the risk of contamination minimised.

| | |
|---|--|
| | <p>If you process or store non-organic you will need to have a system for checking that cleaning has been undertaken and that it is effective to remove residues of non-organic material and/or previous production. This could involve visual inspection, micro-biological testing, testing to ensure sanitisers have been removed from organic food contact surfaces, ATP testing.</p> <p>The European Commission will be releasing detailed rules for cleaning and disinfection of processing and storage facilities in 2026.</p> |
| <p>SA NI 1.12.2 Additional rules for the cleaning and disinfection of livestock buildings and equipment</p> <p>1. For the cleaning and disinfection of livestock buildings and equipment you may only use the following products:</p> <ul style="list-style-type: none"> a) potassium and sodium soap b) water and steam c) milk of lime d) lime e) quicklime f) sodium hypochlorite (for example, as a liquid bleach) g) caustic soda* h) caustic potash* i) hydrogen peroxide j) natural essences of plants k) citric, peracetic, formic, lactic, oxalic and acetic acid l) alcohol m) phosphoric acid* (dairy equipment only) n) nitric acid* (dairy equipment only) o) formaldehyde p) cleaning and disinfection products for teats and milking facilities q) sodium carbonate*. <p>*must not be used as a biocide</p> | <p>The approved products list for the cleaning and disinfection of livestock buildings is undergoing a review, an updated list will be published and applicable from 1st January 2026.</p> |

| | |
|---|--|
| <p>2. These products may only be used if they are authorised for your use in your country. <i>(EC) 2018/848 Art.24(9)</i> <i>(EC) 2018/848 Annex II Part II (1.5.1.6)(1.5.1.7)</i> <i>(EC) 2021/1165 Annex IV Part D</i> <i>(EC) 2018/848 Art.9 (3); Art.24</i> <i>(EC) 2021/1165 Art.5 (1) (2)</i></p> | |
| <p>SA NI 1.12.3 Additional rules for the cleaning and disinfection of buildings and installations used for plant production</p> <p>1. For the cleaning and disinfection of buildings and installations used for plant production only authorised products may be used.</p> <p>2. These products may only be used if they are authorised for your use in your country. <i>(EC) 2018/848 Art.24</i> <i>(EC) 2018/848 Annex II Part I(1.11)</i></p> | <p>Currently there are no substances specifically authorised for cleaning and disinfecting buildings and installations used for plant production.</p> <p>You can use water, steam and products which are permitted for the application on the soil and plants within these standards, such as the permitted pesticides. If you use any other products, you must be able to demonstrate that there is no risk of the products contaminating the soil or plants.</p> |

SA NI 1.13 Pest control

What is this chapter about?

The standards in this section detail how pests are controlled in and around facilities where you carry out organic activities. Pest control in organic production and storage areas should prevent birds, rodents, insects or other pests contaminating organic foods or spreading disease. Pest control should aim, in the first instance, to prevent infestation rather than depend on treatments.

| Standards | Guidance |
|--|--|
| <p>SA NI 1.13.1 Preventing contamination by pests and pest control products</p> <p>1. You must design and operate your buildings and controls to reduce the risk of contamination by pests. In areas used for housing livestock you must remove faeces, urine and uneaten or spilt food as often as necessary to keep smells to a minimum and avoid attracting insects and rodents.</p> | <p>You will need to demonstrate the measures you have in place to reduce the risk of contamination by pests. This should include measures to prevent and control wild birds, rodents and insects from getting into your buildings such as:</p> <ul style="list-style-type: none"> • fly screens • pheromones in traps and dispensers, for monitoring pest levels or as attractants and sexual behaviour disrupters • effective covers of waste bins • sealing gaps and entry points. |

| | |
|---|---|
| <p>2. You must ensure when implementing preventative measures in organic areas that you take precautionary proportionate and appropriate measures to avoid the risk of contamination of organic products.</p> <p style="text-align: right;"><i>(EC) 2018/848 Art.28(1)</i> <i>(EC) 2018/848 Annex II Part II(1.5.1.7)</i> <i>(EC) 2018/848 Annex II Part IV (1.2)(1.4)</i></p> | |
| <p>SA NI 1.13.2 Treating infestations in organic products or areas used for organic products</p> <p>If you find an infestation in organic products, on sacks or containers, in areas used for handling/storing organic products or in areas not used for organic products, you must only use pest control methods which do not contaminate the organic product.</p> <p style="text-align: right;"><i>(EC) 2018/848 Art.28(1)</i></p> | <p> If you use pest control methods, you will need to keep records of:</p> <ul style="list-style-type: none"> • what pests you have found • what chemicals, methods and equipment you used on them • who did the treatment, when and which area or equipment was treated, and • what precautions you took to prevent contamination of organic products. <p>For example, if you need to use pyrethrum as a spray or fog to control insects you must:</p> <ul style="list-style-type: none"> • remove all organic products from the area to be treated • not put organic products back into the treated area for at least 24 hours after the treatment • you will clean all product contact surfaces in the area, (using methods allowed in Soil Association standards), after the treatment and before you process or store organic product there again • provide evidence that these measures were undertaken. <p>Please note that some products have a long residual activity and must only be used in such a manner that the residues will not contaminate the organic product. For example, if you plan to use products that migrate easily, or have longer residual activity such as synthetic pyrethroids, organophosphorous, carbamate or organochlorine compounds then you must put in place additional safeguards to prevent migration or contamination.</p> |

| | |
|---|--|
| | <p>Rodenticides must only be used in tamper-proof bait stations and in places where there is no risk of contaminating products.</p> <p>If you use pest control treatments in areas not used for organic production or storage, you must still assess the risk of contamination and take appropriate preventative measures.</p> <p>You should make your pest control contractor aware that your unit is handling organic products and that you must comply with pest control procedures in section 1.13 of Soil Association standards.</p> <p>Control methods on organic products Control methods which are appropriate for use on organic products include:</p> <ul style="list-style-type: none"> • carbon dioxide or nitrogen • freezing and heating • vacuum treatment <p>Control methods in organic areas Control methods which are appropriate for use in organic areas include, but are not limited to:</p> <ul style="list-style-type: none"> • desiccant dusts such as diatomaceous earth and amorphous silica, preferably from naturally occurring sources • electric flying insect control units, with shatterproof tubes that are positioned and cleaned correctly • tamper resistant bait stations that contain legally approved pesticides • sticky boards for insects • humane electronic rodent repellents such as floor mats |
| <p>SA NI 1.13.3 Treating infestations in livestock housing If you find an infestation in areas used for housing organic livestock, you must only use the pest control methods listed in standard 2.6.3, and rodenticides used in accordance with standard 2.6.4. You must ensure that you take precautionary proportionate and appropriate</p> | <p> If you use pest control methods, you will need to keep records of:</p> <ul style="list-style-type: none"> • what pests you have found • what chemicals, methods and equipment you used on them • who did the treatment, when and which area or equipment was treated, and • what precautions you took to prevent contamination of organic products and toxicity to livestock. |

| | |
|---|--|
| <p>measures to avoid the risk of contamination of organic products or toxicity to livestock.</p> <p>(EC) 2018/848 Art.28 (EC) 2018/848 Annex II Part II(1.5.1.7)</p> | |
| <p>SA NI 1.13.4 Using rodent glue boards</p> <p>You may only use glue boards for rodents as a last resort and you must:</p> <ul style="list-style-type: none"> a) provide evidence to show that other methods of trapping have failed or are not appropriate, before you use the glue boards; b) use them according to industry best practice; c) check rodent glue boards at least once every 12 hours including at weekends and Bank Holidays, as required by the <i>Pest Management Alliance</i> code of practice, and d) keep a record of each check. <p><i>Soil Association higher standard</i></p> | <p> Glue boards should only be used as a last resort and you will need permission from the certification team before using them. You will need to let us know what measures you have already tried, such as bait stations and proofing the unit.</p> <p>Records of checks</p> <p>Glue boards should not be viewed as a permanent solution to a pest problem. Your Certification Officer is able to give you permission to use glue boards but only for short periods of time to allow you to deal with a pest issue. Your pest controller will be able to make recommendations for how many trappings will be required.</p> <p>This standard applies to the whole licensed unit. However, we recognise that in some cases you may not have ownership or control over the whole site – e.g. if you are renting a room in a storage facility. In these cases you must make all efforts possible to create a dialogue with the building manager and/or the pest control company responsible for the site to ensure that you are consulted prior to use of glue boards, or other pest control measures which could affect your organic status, such as fogging.</p> <p>See the Code of Practice on the Humane Use of Rodent Glue Boards for more information.</p> |
| <p style="text-align: center;">Why?</p> <p>In order to protect public health within high-risk environments, the use of rodent glue boards remains an important last option when all other control methods have been considered and deemed ineffective. However, their use does raise serious animal welfare concerns. This standard ensures that glue boards are only used as a last resort and only by persons who have been given adequate training and are competent in the effective and humane use of this technique.</p> | |

| SA NI 1.14 Transport, dispatch and receipt of goods | |
|--|--|
| <p>What is this chapter about?</p> <p>This section details all the standards that need to be met for the transport, dispatch and receipt of organic products.</p> | |
| Standards | Guidance |
| <p>SA NI 1.14.1 Collection of products and transport to preparation units</p> <p>If you are collecting organic and non-organic products at the same time, you must have measures in place to prevent any possible mixing or exchanges between organic, in-conversion and non-organic products and you must be able to clearly identify the organic and in-conversion products. Your collection records need to indicate the collection days, hours, collection circuit and the time and date when products were received.</p> <p style="text-align: right;"><i>(EC) 2018/848 Art.23(1)</i> <i>(EC) 2018/848 Annex III(1)</i></p> | <p> Collection records</p> |
| <p>SA NI 1.14.2 Labelling & transporting products</p> <p>1. If you send organic, or in-conversion product to another company, including retailers, wholesalers and other licensees for further processing, packing or re-labelling you must:</p> <ol style="list-style-type: none"> ensure it is transported in appropriate packaging containers or vehicles closed in such a way that would prevent alteration, including substitution, of the content cannot be achieved without manipulation or damage of the seal. label it clearly with: <ol style="list-style-type: none"> the product name and its organic status the name and address of the operator, and, if different, the seller or owner of the product certification body code product traceability code, such as batch or lot number % organic content of the product (if less than 95%) | <p>For additional requirements for labelling of retail packed products, please refer to section 1.8.</p> <p>If your product is not prepacked for retail, or it goes on for further processing, you can put ingredient information either on the label, or on a document with the product provided it can be clearly linked with the product. For example, grain moved from a dryer to a mill would need to be accompanied by a delivery note with full supplier address, product information (including organic status), batch, haulier and vehicle identification and consignee address.</p> <p>Labelled packaging helps identify organic products and keeps them sealed which limits the risk of contamination and substitution. However, there are products that need to be transported in loose bulk, for example milk in a tanker or fruit and vegetables in open top boxes.</p> <p> Records of transportation of loose organic products</p> <p>However you choose to transport your products, you will need to make sure you have minimised the risk of contamination or substitution with non-organic</p> |

| | |
|---|---|
| <p>2. If this information is provided on the accompanying documentation, it must also include information on the supplier and/or transporter.</p> <p>3. You do not need to use closed packaging, containers or vehicles if:</p> <ol style="list-style-type: none"> Transport takes place directly between two organically certified operators the transport includes only organic or in-conversion products products are accompanied by a document containing the information required in point 1b above both the sending and receiving operators keep records of the transportation. <p><i>(EC) 2018/848 Annex III(2.1)(2.2)</i></p> | <p>products by using clear labelling and separation. For example, if you are transporting loose fruit and vegetables in open top boxes, consider transporting the organic or non-organic in separate vans. Or, close the tops of the boxes containing organic to prevent accidental contamination.</p> |
| <p>4. You must include the words 'Soil Association Organic' or the Soil Association symbol on the packaging of products certified according to Soil Association standards.</p> <p><i>Soil Association higher standard</i></p> | |
| <p style="text-align: center;">Why?</p> <p>Soil Association certified products have been produced and processed to organic standards that are higher than the EU organic regulation. Writing 'Soil Association Organic' on the packaging helps to identify products that have met these higher standards.</p> | |
| <p>SA NI 1.14.3 Receiving organic products</p> <p>When you receive an organic or in-conversion product you must check, upon delivery that the product is labelled according to standard 1.14.2 above and packed appropriately so that it cannot be mistaken or mixed up with other products. You must crosscheck that the label on the product matches the information on the accompanying documents and provide an account of how you check goods upon receipt.</p> <p><i>(EC) 2018/848 Annex III(5)</i></p> | <p>When receiving goods from other units or operators you need to have a system in place for checking the organic status of the products and have records to show these checks are always made.</p> <p> Please see the record keeping section 1.7 for details of the information you will need to record.</p> <p>If you cannot be sure about the organic status of a delivery, for example if information is missing or incorrect, you will need to either:</p> <ul style="list-style-type: none"> • get written confirmation from the supplier • send it back • sell it as non-organic • use it in non-organic products. |

SA NI 1.14.4 Additional rules for transporting feed

1. In addition to standard 1.14.2, when transporting feed you must:
 - a) ensure that the transport of organic feed, in-conversion feed and non-organic feed is effectively separated physically
 - b) ensure that the transport of finished organic feed is effectively separated physically or in time from the transport of other finished products
 - c) label it clearly, either on the product or on accompanying documentation undeniably linked to it so that the recipient can easily identify:
 - i) the product or a description of the compound feedstuff and its organic status.
 - ii) the name and address of the operator, and, if different, the seller or owner of the product.
2. If you use vehicles or containers that have been used to transport non-organic products, you must;
 - a) ensure they are thoroughly clean before transporting organic products. The cleaning measures used must be appropriate to the risks, and the effectiveness of the measures must be checked before transporting organic products.
 - b) assess and implement measures to ensure that non-organic feed cannot be mistaken or mixed up with organic. Where necessary you may be asked to guarantee this.
 - c) keep documentary records of these transport operations.
3. You must keep records of transport operations, including the quantity of products at the start and of each individual quantity delivered.

(EC)2018/848 Annex III 2.1 (b)
(EC) 2018/848 Annex III(3)

Records of cleaning measures

Records of all transport operations

| SA NI 1.15 Storage of products | |
|---|--|
| <p>What is this chapter about?</p> <p>This section details the standards for storing and handling organic products.</p> | |
| Standards | Guidance |
| <p>SA NI 1.15.1 General separation</p> <p>You must manage your organic storage areas and containers in such a way to a) ensure identification of lots and b) avoid any mixing with or contamination from products or substances that we do not allow in these standards. Your organic storage areas, containers and products must be clearly identifiable at all times.</p> <p><i>(EC) 2018/848 Annex III(7.1)</i></p> | <p>Demonstrate that your organic products and lots are clearly identified and separated from areas used for other purposes. Examples include, but are not limited to:</p> <ul style="list-style-type: none"> • identify the room, area, or racking with the word 'organic' to show that it is for storing organic products • identify all organic materials clearly to avoid accidental contamination • have sufficient space or barriers around the organic storage area to stop accidental contamination • only use stores, bins and containers that are made of materials suitable for contact with the food they are to store • dedicate and identify bins and containers as organic • prevent contamination by birds, insects and vermin • clean the stores regularly so that there are no residues which could contaminate organic products or encourage pests. <p>Also refer to the 'preserving organic integrity' section, for details of contamination, and products and substances we do not allow.</p> |
| <p>SA NI 1.15.2 Handling and separating organic and non-organic products</p> <p>When you use the same equipment and premises to store and handle both organic and non-organic products you must:</p> <ol style="list-style-type: none"> avoid the risk of mixing and exchanging organic and in-conversion products with other products and foodstuffs by clearly identifying and separating them during storage, handling and production, and effectively clean equipment and storage areas used to handle or store non-organic products before handling or storing organic and in-conversion products. <p><i>(EC) 2018/848 Annex II Part IV(1.5)</i> <i>(EC) 2018/848 Annex III(7.4)</i></p> | <p>Refer to the 'preserving organic integrity' section 1.11, for details of contamination and products and substances we do not allow.</p> |

| | |
|---|--|
| <p>SA NI 1.15.3 Storing unauthorised inputs on organic units is prohibited</p> <p>The storage of inputs in organic plant, seaweed, livestock and aquaculture production units, which are not permitted under these standards is prohibited.</p> <p>(EC) 2018/848 Annex III(7.2)</p> | |
|---|--|

| SA NI 1.16 Packaging | |
|---|--|
| Standards | Guidance |
| <p>SA NI 1.16.1 Scope</p> <p>These standards apply to packaging of products that you introduce into the supply chain.</p> <p>We define packaging as all primary (retail), secondary (grouping, display) and tertiary (transport) materials used for:</p> <ul style="list-style-type: none"> • containing • protecting • preserving • handling • storage • delivery • labelling • marketing, and • presentation of your products. <p>Note - we include bulk bins but not transport pallets in this definition.</p> <p><i>Soil Association higher standard</i></p> | <p>I Packaging legislation</p> <p>This standard applies to products you process, pack or label, (including on farm), or have contract made for you, (including if you're a contracted symbol user). This standard does not apply if you purchase an already certified product (for example, a wholesaler buying an already certified product). In this case you do not have to supply information on the packaging of that purchased product.</p> <p>Keep in mind that you must make sure your packaging meets all relevant legislation relating to packaging, packaging waste and materials in contact with food. For example, for products sold in the EU such legislation would include, but is not limited to:</p> <ol style="list-style-type: none"> 1. the Defra regulations on extended producer responsibility for packaging products. 2. the European Parliament and Council Directive on Packaging and Packaging Waste (94/62/EC) 3. the European Standard for Compostable Packaging (EN13432) – if you are using compostable or biodegradable packaging. 4. Applicable legality legislation for cellulose based materials, this means the UK Timber Regulations in GB, and the EU Deforestation Regulations, in Northern Ireland and the EU. <p>Environmental information claims and symbols on your packaging need to be clear, truthful and accurate. In the UK, you will need to make sure your packaging conforms to Defra's Green Claims code. For further information on what</p> |

| | |
|---|--|
| | <p>constitutes primary, secondary and tertiary packaging please refer to the Defra definitions of packaging class data.</p> <p>These standards do not apply to outer packaging used to deliver the product to consumers via postal/courier service, such as postal bags/envelopes, boxes and other packaging materials used to protect contents.</p> <p>These standards do not apply to retail bags used by licensed operators, for example, bags for loose fruit and veg used by a retailer or farmers' market.</p> <p>To ensure that your packaging products are as widely recycled as possible we recommend using the OPRL guidelines on labelling to communicate whether products are recyclable at kerbside across the UK.</p> |
| <p style="text-align: center;"><i>Why?</i></p> <p>The production, use and disposal of packaging can have a big impact on the environment and human health. We believe that organic products should be packaged in ways that reduce the negative impacts of packaging. This fits with the principles of protecting the environment and biodiversity that underpin organic food and farming, and meets consumer expectations of organic products.</p> <p>Packaging serves an important role in preventing food waste by protecting and extending the shelf life of products. It also helps to protect consumers by preventing contamination and substitution of organic products with non-organic alternatives. These packaging standards aim to maximise the benefits and avoid the negative impacts of packaging.</p> | |
| <p>SA NI 1.16.2 Chlorine bleached paper or cardboard If you corrugate, bleached paper or cardboard, it must be totally chlorine free (TCF) or elemental chlorine free (ECF). Recycled paper must be process chlorine free (PCF).</p> <p style="text-align: right;"><i>Soil Association higher standard</i></p> | <p>Demonstrate that your packaging products have not used chlorine-based processes in manufacture, for example with a packaging specification for all materials used kept on file.</p> |
| <p style="text-align: center;"><i>Why?</i></p> <p>The use of chlorine bleaching has a high environmental impact and its manufacture can result in the release of toxic chemicals such as dioxins and other pollutants.</p> | |
| <p>SA NI 1.16.3 Paper, card and wood-pulp packaging products* Any paper, card and pulp packaging materials from forest ecosystems must be sourced responsibly.</p> | <p>Adequate evidence of compliance with this standard is demonstration that packaging products carry certification from Forest Stewardship Council (FSC) or the Programme for the Endorsement of Forest Certification (PEFC).</p> <p>This can be done with an invoice for the products including a valid chain of</p> |

Soil Association higher standard

*This standard comes into effect from **September 2025**.

custody claim from FSC or PEFC. Licensees can:

- source products which carry source FSC or PEFC certification from suppliers,
- obtain an independent FSC or PEFC chain of custody certificate,
- establish [FSC](#) or [PEFC](#) group certification with other businesses (suitable for small businesses).

See the [FSC website](#) and/or the [PEFC website](#) for more information on the certification process and to obtain approved materials.

When using recycled paper/card material your packaging must be compliant with the approved certification schemes from PEFC or FSC, for example for FSC these include 'FSC Mix' and 'FSC Recycled' labels, more information on [FSC labelling is available here](#).

This requirement does not apply when paper/card is derived from outside of forest ecosystems, this can include from agricultural wastes and grasses such as miscanthus. Non-timber forest products (e.g. bamboo or cork) are not within the scope of this standard but we recommend FSC/PEFC certification is sought where applicable for these products.

To allow licensees to use up existing stock and source compliant products, this standard will be enforced from September 2025, but licensees should look to source compliant products at the earliest opportunity.

Why?

Forests are fundamental in responding to the challenges we face, and to ensure a sustainable future. They regulate ecosystems, protect biodiversity, support livelihoods and help stabilise the climate. Paper packaging makes up more than half of the paper and pulp used in Europe, and this is projected to rise as many look to transition away from plastic packaging. Ensuring that products are deforestation-free is a core goal for the organic movement.

SA NI 1.16.4 Plastic materials, coatings, dyes or inks containing phthalates*

You must **not** use plastic materials, coatings, dyes or inks that contain phthalates.

Soil Association higher standard

Demonstrate that you have not used these materials, for example with a packaging specification for all materials used kept on file.

This restriction applies to all packaging products in scope. Until September 2025 the restriction applies to plastic materials, coatings, dyes, or inks in contact with foodstuffs. From September 2025, the restriction will apply to all packaging,

| | |
|---|--|
| *The changes to this standard come into effect from September 2025 . | <p>whether in contact with foodstuffs or not.</p> <p>To avoid phthalates in packaging materials we recommend:</p> <ol style="list-style-type: none"> avoid PVC and use plastics that do not require plasticizers for flexibility, such as polyethylene, e.g., PET, HDPE, and LDPE. using non-phthalate-based plasticizers which are widely available on the market, see the ChemSec marketplace for more options. consider whether packaging is necessary or if there are non-plastic alternatives. |
|---|--|

Why?

Phthalates are a group of chemicals used as a plasticizer in the manufacture of many plastics, giving flexibility to more brittle materials. Phthalates can have a negative impact on human and environmental health, including endocrine disruption in humans and effects on reproduction in all studied animal groups. They are not chemically bound to the material to which they are added meaning they can continuously leach into food products as a food contact material or into the environment.

| | |
|--|---|
| <p>SA NI 1.16.5 PVC and other chlorinated plastics*</p> <p>You must not use polyvinyl chloride (PVC) or any other chlorinated plastics unless alternative materials are not available or are functionally unsuitable, as listed in the guidance section of this standard.</p> <p><i>Soil Association higher standard</i></p> <p>*The changes to this standard come into effect from September 2025.</p> | <p>Demonstrate that you have not used these materials, for example with a packaging specification for all materials used kept on file.</p> <p>This restriction applies to all chlorinated plastics which includes:</p> <ul style="list-style-type: none"> polyvinyl chloride (PVC), polyvinylidene chloride (PVdC) (<i>applied from September 2025</i>), vinyl chloride, <p>There are some specific circumstances where we are aware that no functional alternatives to PVC currently exist, for example, to have adequate barrier properties to comply with food safety in transport standards requirements.</p> <p>As a result, you are permitted to use PVC in the following applications:</p> <ul style="list-style-type: none"> metal jar lids or caps (e.g. for jams, sauces and baby food), and tamper evident seals on jar lids or caps. <p>We will keep these exceptions under review on an annual basis as innovation for functional alternatives develops.</p> |
|--|---|

Why?

The production, use and disposal of PVC is associated with a range of environmental and human health issues. PVC often contains additives which are added to improve flexibility and plasticity, including phthalates. PVC can also contain other toxic substances such as chlorinated paraffins, organic tin compounds and alkyl phenols. Chlorinated plastic materials are very difficult to recycle and can act as a contaminant when added to other plastic recycling systems, rendering output materials unfit for use. Chlorinated plastic materials can also have corrosive effects on recycling machinery.

The environmental hazards of PVC go beyond those associated with other plastics. Some of today's most worrying environmental contaminants are released during the production of PVC or its feedstocks and during the disposal of PVC products.

SA NI 1.16.6 Non-GM packaging

You must **not** use packaging materials or substances that contain, have been derived from, or manufactured using genetically modified organisms or genetically engineered enzymes, unless alternative materials are not available, or not possible to verify as indicated in the guidance section of this standard.

Soil Association higher standard

You must seek non-GM sources of packaging materials. This applies to all materials derived from plant-based sources, including:

- polylactic acid (PLA),
- polyhydroxyalkanoates (PHA),
- polybutylene succinate (PBS),
- different starch blends.

To mitigate the risk of GM source material in packaging products we recommend you request product specification lists for any compostable or biodegradable packaging products. Biopolymers are often made from natural sugar sources derived from crops such as maize and sugarcane, which are both considered GM risk crops. When sourcing materials it is important to request confirmation from your supplier of the source crop material and whether it is from a country where GM crops are permitted.

Adequate demonstration of non-GM for packaging materials includes:

- Raw materials from certified organic production,
- Non-GMO Project certification ([more info here](#)),
- IP or PCR testing results for the raw materials.

It is not technically possible to verify the non-GM status of certain components at different stages of the packaging manufacturing process. As a result, such components are exempt from the requirements of these standards. The exempt components are:

| | |
|---|---|
| | <ul style="list-style-type: none"> • glues, • labels, • inks and dyes applied to packaging products, • biodegradable coatings, • lids containing epoxylised soybean oil (ESBO), • starch used in paperboard manufacture, and, • enzymes used in the packaging manufacturing process. <p>This standard also applies to cotton teabag strings. Using organic teabag strings means you automatically meet the requirements of this standard. If your tea bag strings are non-organic you will need to provide details of the country of origin of the cotton used in them, and/or an IP certificate to prove they are not made with genetically modified cotton.</p> |
| <p style="text-align: center;"><i>Why?</i></p> <p>Genetic modification is counter to the principles and practice of organic food and farming and does not meet consumer expectation of organic products. Whilst most packaging derived from GM materials no longer contain GM DNA, they are still derived from raw materials which have been genetically modified. Considering the increased global demand for plant-based plastic materials and future projections for growth in the sector, there is a risk that packaging may become a significant driver of GM agriculture.</p> | |
| <p>SA NI 1.16.7 BPA and other bisphenols in food-contact materials</p> <p>You must not intentionally use Bisphenol A (BPA) or other bisphenols in materials that will be in direct contact with foodstuffs.</p> <p style="text-align: right;"><i>Soil Association higher standard</i></p> | <p>Demonstrate that you have not used BPA or other bisphenols in your food contact materials, for example with a packaging specification for all materials used kept on file.</p> <p>Bisphenol A (BPA) is a chemical found in some plastics and used in the manufacture of epoxy resins. It is commonly found in the linings of some food and beverage cans. Alternatives to BPA include epoxy-phenolic, modified polyester and acrylic.</p> <p>The wording ‘intentionally use’ refers to the fact that some materials are classified as BPA-NI, where “NI” stands for ‘non-intentional’. This classification means that although there is no BPA added as a constituent of a lacquer, BPA may be present in the pipework, raw material packaging, processing equipment etc. and small amounts may be picked up by the finished product during production. Although you should avoid them where possible, you can still use BPA-NI materials for the time being. We will monitor the situation with BPA-NI</p> |

| | |
|---|--|
| | <p>materials with a view to totally eradicating BPA from all food contact materials in due course.</p> <p>Type 7 plastics may be made from BPA. Type 3 plastics (PVC) could also contain BPA, but only in the case of flexible PVC which is prohibited under standard 1.16.5 of these standards.</p> |
| <p><i>Why?</i></p> <p>Studies have shown that BPA has endocrine disrupting properties and toxic effects on our ability to reproduce. Studies have also raised serious concerns over other bisphenols that are sometimes used as an alternative to BPA, such as BPAF, BPB and BPZ. The toxic effects of Bisphenols are evident even at low concentrations.</p> | |
| <p>SA NI 1.16.8 Oxo-degradable plastics*</p> <p>You must not use oxo-degradable plastics.</p> <p><i>Soil Association higher standard</i></p> <p>* This standard comes into effect from September 2025.</p> | <p>Demonstrate that you have not used these materials, for example with a packaging specification for all materials used kept on file.</p> <p>Oxo-degradable plastics are not bio-based or compostable plastics; they are conventional plastics with 'pro-degradant' additives that accelerate the fragmentation process. To avoid oxo-degradable packaging products we recommend:</p> <ul style="list-style-type: none"> • use of recyclable plastic formats such as LDPE, or, • use of certified compostable plastics (see 'Packaging Scope' for more guidance) <p>For more information and evidence on oxo-degradable plastics see this statement from the New Plastics Economy Initiative.</p> <p>To allow licensees to source compliant products, this standard will be enforced from September 2025, but licensees should look to source compliant products at the earliest opportunity.</p> |
| <p><i>Why?</i></p> <p>Oxo-degradable plastics are considered a 'problematic plastic' owing to their environmental impacts. They contribute to microplastic pollution as they are conventional plastics that fragment by design and are not suited for long-term reuse, recycling at scale or composting. They can undermine recycling systems when captured.</p> | |
| <p>SA NI 1.16.9 Polystyrene*</p> <p>You must not use polystyrene plastics in primary packaging materials.</p> | <p>Demonstrate that you have not used these materials, for example with a packaging specification for all materials used kept on file.</p> |

Soil Association higher standard

* This standard comes into effect from **September 2025**.

This restriction includes all types of polystyrene plastics, these include Expanded Polystyrene (EPS) and Extruded polystyrene (XPS). They are defined as Type 6 plastics (PS) and can be in rigid or film forms as well as the more common expanded foam.

This **restriction is limited to primary product packaging**, that is packaging contained in a single sales unit to customers. It does not apply to polystyrene used in a business-to-business supply chain where there is greater opportunity for reuse and recycling. For more information on what constitutes primary packaging see [Defra definitions of packaging class data](#).

We will keep the scope of this restriction under review on an annual basis.

To allow licensees to source compliant products, this standard will be enforced from September 2025, but licensees should look to source compliant products at the earliest opportunity.

Why?

Polystyrene is considered a 'problematic plastic' owing to its negative impact on the environment and human health. Polystyrene is made using the chemical styrene, which has been linked to cancers and nervous-system effects. It is not readily recycled and is persistent in the environment once disposed of. It is a consistent component of marine and coastal litter, breaking up into smaller pieces and releasing toxins, presenting hazards to marine species.

SA NI 1.16.10 PFAS (Per- and polyfluoroalkyl substances)*

You must **not** use per- and polyfluoroalkyl (PFAS) chemical substances in your packaging products.

Soil Association higher standard

* This standard comes into effect from **September 2025**.

Demonstrate that your products have not used PFAS chemicals in their manufacture, for example with a packaging specification for all materials used kept on file, if you use the following materials:

- greaseproof or water-resistant paper packaging (e.g., bread / pastry bags),
- baking paper or cake cases,
- takeaway pizza boxes and card clamshells,
- butter and cheese papers.

There are PFAS-free market ready alternatives to all these applications and/or opportunities to consider reusable or removal options. For alternatives, please review the [ChemSec marketplace](#).

To allow licensees to source compliant products, this standard will be enforced from September 2025, but licensees should look to source compliant products at the earliest opportunity.

Why?

PFAS are a group of chemicals known as 'forever chemicals' because they are extremely persistent in the environment. PFAS have been shown to disrupt hormone systems in animals and are classed as endocrine disruptors. Studies have shown links between PFAS exposure and a wide range of human health concerns including cancer, immune system disorders and fertility problems.

SA NI 2.0 Standards for organic land and crops

SA NI 2.1 Converting land and crops to organic production

What's this chapter about?

This section covers conversion periods for land and various types of crops. It also includes standards for retroactive approval of conversion periods and Soil Association higher standards protecting the conversion of land which has high conservation value.

| Standards | Guidance |
|---|---|
| SA NI 2.1.1 Starting your conversion Your conversion period starts on the date you inform your certification body that you wish to use the land for Soil Association certified production or when your certification body has determined that you comply with these organic standards. During the conversion period you must comply with these organic standards. <i>(EC) 2018/848 Art. 10(1)(2)</i> | New land may enter conversion from the date that the application is received by Soil Association Certification (or a specified date thereafter). If it cannot be verified at inspection that organic standards have been met since the conversion start date, livestock that have grazed this land could lose status. You can convert your farm in separate units over a longer time period. Land and livestock conversion can start at different dates. The certification team can provide further details. You may also wish to consider the requirements for organic grant payments. |
| SA NI 2.1.2 Conversion periods for land and crops 1. For land and crops to be considered organic, the organic production rules as referred to in these organic standards must have been applied to the land from the agreed start date of conversion for the following periods: a) all land – 24 months | You must provide details of known historical environmental pollution or use of prohibited substances that may be present beyond the normal conversion period. We may take soil samples to determine if your conversion period needs to be extended. |

| | |
|--|---|
| <p>b) crops grown on your land:</p> <ol style="list-style-type: none"> arable and horticultural crops – 24 months before the sowing or planting of the organic crops grass – 24 months before grazing or cutting for organic hay or silage perennial crops already in the ground (other than grass or forage) – 36 months before harvesting organic crops. <p>2. Your competent authority may decide that your conversion period is extended or declared unsuitable for conversion if your land has been contaminated by products not permitted in these standards. In this case the allowance for reduced conversion for land used for pigs or poultry will not apply.</p> <p style="text-align: right;"><i>(EC) 2018/848 Art. 10(1)</i> <i>(EC) 2018/848 Annex II Part I(1.7.1)(1.7.2)(1.7.4.2)</i></p> | |
| <p>SA NI 2.1.3 Reducing conversion periods</p> <p>1. Your conversion period may be reduced if you can demonstrate that:</p> <ol style="list-style-type: none"> the land has been managed under a recognised agri-environmental scheme which prohibits any pesticides or fertilisers that these organic standards do not allow, or the land has not been treated with any products prohibited under these organic standards for at least three years. <p>2. Your competent authority must approve any reduction.</p> <p style="text-align: right;"><i>(EC) 2018/848 Art. 10(3)</i> <i>(EC) 2018/848 Annex II Part I(1.7.4)</i></p> | <p>To request a reduction in your conversion period you need to provide proof that you have not used anything we do not allow in these organic standards on this land for the period of this reduction.</p> <p>To request a reduction in your conversion period, you need to get permission from your competent authority. In NI the competent authority is NICA. It is likely that we will need to see third party verification that no prohibited inputs have been used. For example, Countryside Stewardship agreements with confirmation from the scheme managers that no prohibited substances have been used.</p> |
| <p>SA NI 2.1.4 Compulsory treatment of land with prohibited products</p> <p>1. If you have to treat an area of your organic land or land in the process of conversion with anything these organic standards do not allow you must notify your certification body. Reasons for treatment may include a compulsory</p> | <p>Provide us with details of the compulsory control scheme or scientific test including the products used and the next harvest date. We will inform your competent authority and they will decide if the re-conversion period can be reduced. In NI the competent authority is NICA.</p> |

| | |
|--|--|
| <p>pest or disease control scheme, use of plant reproductive material treated as a phytosanitary requirement or as part of a scientific test approved by your competent authority, This land will have to go through another conversion period.</p> <p>2. The conversion period may be reduced based on:</p> <ol style="list-style-type: none"> the material used and how quickly it will break down in the soil or plant material when the next harvest (which cannot be sold as organic) is, and approval from your competent authority. <p><i>(EC) 2018/848 Annex II Part I(1.7.3)(1.7.4)(1.8.5.3)</i></p> | |
| <p>SA NI 2.1.5 Selling in-conversion crops Your in-conversion crops can be labelled as ‘product under conversion to organic farming’ provided that:</p> <ol style="list-style-type: none"> the land that the crop is grown on has completed 12 months of conversion before harvesting the crop the phrase ‘product under conversion to organic farming’ is not more prominent in colour, size and style of lettering than the sales description of the product the words ‘organic farming’ are not more prominent than the words ‘product under conversion to’ the product contains only one crop ingredient of agricultural origin the label does not include the Soil Association symbol or the EU organic logo. <p><i>(EC) 2018/848 Art. 33 (EC) 2018/848 Art. 30(3) (EC) 2018/848 Art. 10(4) (EC) 2021/279 Art. 3(1)</i></p> | <p>We can provide you with a Trading Schedule showing crops that are eligible to sell as in-conversion.</p> |
| <p>SA NI 2.1.6 Switching land between organic and non-organic management You must not switch your land back and forth between organic and non-organic management.</p> | <p>If you are planning to reconvert land which was previously under organic management you must inform us:</p> <ul style="list-style-type: none"> when the land was taken out of organic management, and the reasons for this. |

Soil Association higher standard

If land was treated as part of a compulsory pest or disease control scheme, or as part of a scientific test we may allow you to reconvert your land back to organic.

Why?

We prevent producers taking land out of organic management in order to treat the land with chemicals to try and tackle pest and disease problems. We encourage and support our producers to solve these problems through organic practices, such as rotating crops and selecting varieties with a natural resistance to pests and diseases. This not only reduces the impact to the natural environment, but often offers better long term solutions to pest and disease problems.

SA NI 2.1.7 Maintaining High Conservation Values

Any conversion of land undertaken for organic production must maintain:

- a) any High Conservation Values, or
- b) any sites or resources necessary to maintain those High Conservation Values.

There are six High Conservation Values. Only one category needs to be met for an area of land to have High Conservation Value. These are:

HCV 1: Concentrations of biological diversity including endemic species, and rare, threatened or endangered species that are significant at global, regional or national levels.

HCV 2: Intact forest landscapes and large landscape-level ecosystems and ecosystem mosaics that are significant at global, regional or national levels, and that contain viable populations of the great majority of the naturally occurring species in natural patterns of distribution and abundance.

HCV 3: Rare, threatened or endangered ecosystems, habitats or refugia.

HCV 4: Basic ecosystem services in critical situations, including protection of water catchments and control of erosion of vulnerable soils and slopes.

HCV 5: Sites and resources fundamental for satisfying the basic necessities of local communities or indigenous peoples (for livelihoods, health, nutrition, water etc.), identified through engagement with these communities or indigenous peoples.

HCV 6: Sites, resources, habitats and landscapes of global or national cultural, archaeological or historical significance,

This standard applies to the maintenance of High Conservation Values (HCV) identified on your land, during any change of land use, irrespective of whether the land was previously managed or unmanaged, organic or non-organic.

You must identify High Conservation Values on your land using the guidance below.

You must inform us if any planned changes of land use are likely to affect the High Conservation Values you have identified **on your land**. **By the term 'land use change', we mean for example meadow becoming woodland, permanent pasture becoming arable, hedges being removed, buffer strips along a watercourse being removed, undisturbed land being cultivated.**

If your planned changes are likely to have an impact on High Conservation Values, you must inform us prior to the changes taking place. We will ask you to demonstrate that your proposed changes will have a positive impact (or not negatively impact) the identified conservation values. A template is available on request.

Guidance on the presence of HCVs in the UK

In the absence of a [National Interpretation](#) for High Conservation Values, we have developed the following guidance which acknowledges that in the UK, there are a range of legal safeguards in place to protect HCVs complemented by agri-environment scheme requirements, some of which are monitored by statutory bodies. A checklist is available [online](#) or on request.

HCV 1: SSSIs and ASSIs are monitored by statutory nature conservation bodies who would need to give consent prior to land use changes. You are also responsible for protecting Protected Species.

HCV 2: There are no HCV 2 sites in the UK.

HCV 3: The lists of Special Areas of Conservation ([SACs](#)), Special Protection Areas (SPAs), and SSSIs can help you identify any statutory designations or rare ecosystems on your land. These are monitored by statutory nature conservation bodies who would need to give consent prior to land use changes.

| | |
|---|---|
| <p>and/or of critical cultural, ecological, economic or religious/sacred importance for the traditional cultures of local communities or indigenous peoples, identified through engagement with these local communities or indigenous peoples.</p> <p><i>Soil Association higher standard</i></p> | <p>Sites of Importance for Nature Conservation (SINCs, also known as SNCIs or Local Wildlife Sites) are non-statutory sites with locally identified conservation value.</p> <p>Land use changes of uncultivated land and semi-natural areas are subject to the <i>Environmental Impact Assessment (Agriculture) Regulations</i>.</p> <p>The <i>UK BAP Priority Habitats list includes</i> hedgerows, ponds, arable field margins, traditional orchards, wetlands, and several types of woodland/meadows/grassland/heathland as Priority Habitats for conservation. Any habitat on this list counts as HCV3.</p> <p>HCV 4: HCV 4 areas can largely be protected through compliance with the organic standards (which address risks such as low ground cover, pollution, soil disturbance, soil erosion) though additional management not specifically mentioned may be required e.g. effective slope management and effective water catchment management.</p> <p>HCV 5: You must consider the impact of your land use change on local communities – particularly if communities are reliant on your land for livestock fodder, renewable energy (e.g. biofuel feedstock), satisfying their basic food security needs (e.g. by fishing, hunting, gathering wild foods), or if your changes could impact the quality or volume of local water resources necessary for drinking or sanitation. HCV 5 is most relevant in places with little or no water or electricity infrastructure, and greater degrees of subsistence farming.</p> <p>HCV 6: Statutory-recognised and -enforced designations exist for UNESCO World Heritage Sites, scheduled monuments, listed buildings, scheduled monuments in fields, Conservation Areas, AONBs, National Scenic Areas, National Parks and UNESCO cultural landscapes. Any religious or sacred sites, burial grounds or sites at which traditional ceremonies take place which do not hold official designations would also count as HCV 6 if the site is important to local people.</p> |
|---|---|

SA NI 2.1.8 Past clearance of natural ecosystems

Where land was cleared or otherwise converted to agriculture after January 2007 without a prior HCV assessment, this land cannot be used for organic production except where evidence is provided that natural ecosystems were not destroyed.

There are six High Conservation Values. Only one category needs to be met for an area of land to have High Conservation Value. These are:

HCV 1: Concentrations of biological diversity including endemic species, and rare, threatened or endangered species that are significant at global, regional or national levels.

HCV 2: Intact forest landscapes and large landscape-level ecosystems and ecosystem mosaics that are significant at global, regional or national levels, and that contain viable populations of the great majority of the naturally occurring species in natural patterns of distribution and abundance.

HCV 3: Rare, threatened or endangered ecosystems, habitats or refugia.

HCV 4: Basic ecosystem services in critical situations, including protection of water catchments and control of erosion of vulnerable soils and slopes.

HCV 5: Sites and resources fundamental for satisfying the basic necessities of local communities or indigenous peoples (for livelihoods, health, nutrition, water etc.), identified through engagement with these communities or indigenous peoples.

Natural ecosystems

If you are converting land that may have been cleared after January 2007 you will need to provide evidence that natural ecosystems were not destroyed. Natural ecosystems are defined as ecosystems that resemble, in terms of species composition, structure, and function, those that are or would be found in a given area in the absence of significant human management impacts. This includes: Forests, tree-covered areas that:

- **are not occupied by agriculture or other specific non-forest land uses**
- **consist primarily of native plant species, and**
- **contain a vegetation structure that generally resembles that of a natural forest of the same age in the same area.**

The following types of tree-covered areas are not considered natural ecosystems:

- **forestry or fruit tree plantations**
- **tree-covered areas that are managed as diversified food production systems, including traditional and modern management systems such as home gardens, agroforestry systems, and mixed tree-cattle systems, or**
- **areas that are managed as long-rotation swidden (shifting cultivation) systems under traditional, indigenous people, communities, or smallholder land-use systems (even if they otherwise meet the definitions of natural ecosystems) and fallow lands for soil fertility recovery purposes.**

Remote sensing tools such as [Global Forest Watch](#) and [Global Forest Change](#) Landsat mapping can be used to identify tree cover loss and land-use change.

HCV 6: Sites, resources, habitats and landscapes of global or national cultural, archaeological or historical significance, and/or of critical cultural, ecological, economic or religious/sacred importance for the traditional cultures of local communities or indigenous peoples, identified through engagement with these local communities or indigenous peoples.

Soil Association higher standard

Why?

Expansion of agriculture globally has resulted in the destruction of millions of hectares of forests and other natural or important ecosystems to make way for farming, with negative impacts on biodiversity, climate and indigenous peoples.

We prohibit the clearing of land which has high conservation value to create organic agricultural land. We use the HCV definition to identify and prohibit the clearing of areas that are critically important because of their environmental, socioeconomic, biodiversity or landscape values.

SA NI 2.2 Managing organic and non-organic enterprises

What is the chapter about?

This section contains standards on how separation must be maintained in cases where both conventional and organic production occurs within the same holding.

| Standards | Guidance |
|---|--|
| <p>SA NI 2.2.1 Simultaneous organic and non-organic production</p> <p>1. If you have organic and non-organic production units on the same holding you must:</p> <ol style="list-style-type: none">clearly define your units of land used for organic and non-organic productionkeep the organic and non-organic production and storage areas clearly separatenot store products that are not allowed under these organic standards on your organic unitkeep adequate records to show separationnot have organic and non-organic livestock of the same speciesnot grow organic and non-organic crops of the same variety <p>2. If your holding or unit is partly under organic production and partly in conversion to organic production, you must keep the organically produced and in-conversion products separate and the animals separate or readily separable and keep adequate records to show separation.</p> <p style="text-align: right;"><i>(EC) 2018/848 Art. 9(2)(7)(10)</i> <i>(EC) 2018/848 Annex III(7.1)</i> <i>(EC) 2018/848 Art. 9(8)(9)</i></p> | <p>You may use the same equipment for organic and non-organic production provided it is cleaned between uses to prevent contamination.</p> <p>We will inspect both the organic and non-organic production areas.</p> <p> Records demonstrating adequate separation of organic and non-organic production</p> <p>In NI, NICA, the competent authority defines clearly separate units as physically, financially and operationally separate.</p> <p>Physically separate:</p> <ul style="list-style-type: none">your non-organic unit must have distinct blocks of land which are separate from your organic unitwe do not allow a mosaic of organic and non-organic fieldsorganic and non-organic units can be next to each other but there must be a barrier between them, such as a hedge or fence. <p>Financially separate:</p> <ul style="list-style-type: none">you must keep separate financial recordsyou must be able to clearly identify invoices for each unit. <p>Operationally separate:</p> <ul style="list-style-type: none">you must demonstrate that you manage the organic unit as a distinct and separate operationyou can use shared cultivation equipmentyou must show how you separate organic and non-organic in housing, machinery, equipment for feed, milling and mixing and parlours |

| | |
|--|---|
| | Refer to standards 2.2.2 and 2.2.3. for detailed rules on growing non-organic and organic crops and to section 3.3 for detailed rules on keeping organic and non-organic livestock. |
| <p>SA NI 2.2.2 Growing non-organic crops</p> <p>If you grow the same crops on your non-organic land as on your in-conversion or organic land this is called parallel production. In these cases your certification body must be able to easily identify different varieties on each area.</p> <p><i>(EC) 2018/848 Art. 9 (2)(7)(10)</i></p> | |
| <p>SA NI 2.2.3 Parallel production exceptions</p> <p>1. You may 'parallel produce' only the following:</p> <ul style="list-style-type: none"> a) perennial crops which are grown for at least three years b) seeds, vegetative propagating material or transplants c) grassland used only for grazing d) crops grown for agricultural research or crops and livestock on farms used for formal education, only with agreement from your competent authority. <p>2. In addition (with the exception of grassland for grazing), you may 'parallel produce' only if you:</p> <ul style="list-style-type: none"> a) permanently separate the products from each unit b) tell your certification body at least 48 hours before you harvest each crop c) tell your certification body the exact quantities harvested and confirm you have kept the products separate d) get approval from your certification body each year, and e) for perennial crops only agree with your certification body, to convert the whole area concerned within five years. <p><i>(EC) 2018/848 Art. 9(2)(7)(10)</i> <i>(EC) 2018/848 Art. 22(1)</i> <i>(EC) 2018/848 Art. 9(8)(9)</i></p> | If the organic and non-organic operations are run as separate businesses this does not apply. |

SA NI 2.3 Environmental management and conservation

What is this chapter about?

This chapter details the obligations of organic farmers to protect the environment. Organic farming aims to produce food while maintaining and contributing to the preservation of natural areas and the wider environment. Organic farming is rooted within living ecological systems and benefits from working with the natural environment. Using practices that attract or introduce beneficial insects, provide habitat for predatory birds and mammals and increase soil biodiversity fulfil vital ecological functions in organic production systems.

Standards

SA NI 2.3.1 Biodiversity conservation and enhancement

Your production activities must contribute to high levels of biodiversity and the protection of ecologically significant habitats. You must take into account the local or regional ecological balance when taking production decisions.

(EC) 2018/848 Art. 4(c)

(EC) 2018/848 Art. 5(a)

(EC) 2018/848 Art. 4(a)

Guidance

- Identify on your farm maps any ecologically significant habitats, such as water courses, wetlands, open water, springs, woodlands, large native trees, lowland meadows, ridge and furrow fields, hedgerows, heathlands or rare habitats as declared by local law that are part of your holding or affected by your activities on your holding.
- Include any statutory, non-statutory, local wildlife sites and Biodiversity Action Priority (BAP) habitats.
- In the UK the [MAGIC](#) website provides geographic information on the location and type of priority habitats.
- Describe the measures you will implement to ensure these areas and habitats are protected and/or enhanced.

Any practices that may damage statutory, non-statutory or local wildlife sites or ecologically significant habitats are prohibited. For example, ploughing species rich or unimproved grasslands.

Here is a [link](#) to the list of BAP priority habitats in the UK.

Resources on wildlife and habitat conservation are available from Natural England, Scottish National Heritage, Natural Resources Wales or Northern Ireland Environment Agency. Where UK statutory bodies are responsible for designation and monitoring of wildlife sites, they can offer advice on habitat management.

Statutory recognised sites include:

- Internationally important wildlife sites
- Special Protection Area (EU birds directive)

| | |
|---|--|
| | <ul style="list-style-type: none"> • Special Area of Conservation (EU habitats directive) • RAMSAR site (convention on wetlands of international importance) <p>Nationally important wildlife sites in the UK</p> <ul style="list-style-type: none"> • Site of Special Scientific Interest (Wildlife and Countryside Act 1981 and Countryside and Rights of Way Act 2000) • National Nature Reserve <p>Non-statutory or local sites may be described by a range of terms including:</p> <ul style="list-style-type: none"> • Wildlife site • Site of Nature Conservation Importance (SNCI) • Site of Importance for Nature Conservation (SINC), or • Regionally Important Geological Site (RIGS). <p> The bodies that designate and monitor the non-statutory and local sites are either your local authority or the local Wildlife Trusts. Information is also sometimes held by County Environmental Record Centres.</p> |
| <p>SA NI 2.3.2 Preventing environmental contamination</p> <p>You must carefully manage all your operations and activities to avoid or minimise contaminating the environment.</p> <p><i>(EC) 2018/848 Annex II Part I(1.6)</i> <i>(EC) 2018/848 Art. 4(d)</i></p> | <p>Consider all aspects of your management practices and how they might impact on the environment.</p> <p>These can include:</p> <ul style="list-style-type: none"> • soil • manure, milk, slurry, silage and other effluents • plastics • supplementary nutrient inputs • pest and disease control products • fuel • waste products • dirty water • leftover foot bath solution and spent dip • redundant machinery and batteries <p>Where you identify risks, describe how you will minimise these. For example:</p> <ul style="list-style-type: none"> • how you avoid run-off and the pollution of ground water • how you avoid the loss of nutrients to the air and water • how you ensure sufficient storage capacity for livestock manure and slurry |

| | |
|---|--|
| | <ul style="list-style-type: none"> • how you assess water pollution risk • compliance with statutory rules (e.g. Code of good practise, NVZ rules, Silage, Slurry and Agricultural Fuel Oil (SSAFO) regulations in the UK). <p>Pest and disease control products such as sheep dip may not meet these organic standards. If you have any queries please contact the certification team.</p> |
| <p>SA NI 2.3.3 Making responsible use of resources You must use energy, water and other natural resources responsibly. You must reduce or minimise your use of non-renewable resources and off-farm inputs. <i>(EC) 2018/848 Art. 4(c)</i> <i>(EC) 2018/848 Art. 6(b)</i></p> | <p>Identify which resources you use and ensure you use them efficiently. For example, for energy use:</p> <ul style="list-style-type: none"> • What type of energy you use (renewables, electricity, gas, CO₂) for which purposes. • How you record this use. • How you minimise the use, e.g. using smart technology, ensuring buildings are well insulated, ventilated and draught-proofed. • Ensure heating and cooling systems have functioning timers and thermostats. Adapt their use according to weather conditions. • Purchase energy-efficient equipment, keep equipment well-maintained and switch it off when not in use. • Drive vehicles efficiently, ensuring correct tyre pressures. <p>Burning fuel solely to produce carbon dioxide for use in protected cropping is not sustainable and does not meet this standard.</p> <p>For example, for water use, including irrigation and abstraction:</p> <ul style="list-style-type: none"> • Ensure you use water efficiently. • Consider systems for rainwater capture, storage and use. • Monitor your use of water to ensure you minimise wastage and optimise soil water content. • Identify areas prone to run off and soil erosion, and adopt appropriate strategies to minimise these. Strategies might include selecting suitable stock type and levels, under-sowing, inter-cropping systems, non-inversion and contour cultivation, herbage strips and overwinter green covers. • Minimise the amount of dirty water you have to dispose of. • Identify any local drainage basin management issues. |

SA NI 2.4 Managing your soil

What is this chapter about?

Organic production is based on nourishing plants primarily through the soil ecosystem. This section details how an organic production system maintains and enhances natural soil fertility, good soil structure, stability and biodiversity, preventing and combatting soil compaction and soil erosion.

| Standards | Guidance |
|---|--|
| <p>SA NI 2.4.1 Managing your soil</p> <ol style="list-style-type: none"> 1. Your plants must be nourished primarily through the soil ecosystem. The organic matter, fertility and biological activity of the soil must be maintained and increased primarily by; <ol style="list-style-type: none"> a) except in the case of grassland or perennial forage, by the use of multiannual crop rotation including mandatory leguminous crops as the main or cover crop for rotating crops and other green manure crops; b) in the case of greenhouses or perennial crops other than forage, by the use of short-term green manure crops and legumes as well as the use of plant diversity; and c) in all cases, by the application of livestock manure or organic matter, both preferably composted, from organic production. 2. The soil must be managed to enhance stability, soil organic matter levels and soil structure and to prevent compaction, erosion and run-off. 3. Mineral nitrogen fertilisers cannot be used. <p style="text-align: right;"><i>(EC) 2018/848 Art. 6(a)(c)</i> <i>EC) 2018/848 Annex II Part I(1.9.1)(1.9.2)(1.9.8)</i></p> | <p>Your system should:</p> <ul style="list-style-type: none"> • build and maintain the health of your soil • maximise the efficient use of nutrients • minimise the use of brought-in inputs • minimise the risk of soil and water run-off, flooding, wind, and soil erosion • maintain good soil structure <p>If your crop or livestock management is not delivering these objectives then you need to review and amend your practices accordingly. In systems where crop rotation is not possible, you need to demonstrate that you are building and maintaining soil fertility by other means.</p> <p>The main examples of production systems where you cannot produce crops within a rotation are:</p> <ul style="list-style-type: none"> • permanent pastures, including upland habitats • perennial crops such as orchards, vineyards and plantation crops. <p>We may require evidence that soil fertility is being maintained. This may be through soil testing results and/or yield records. Poaching, overgrazing and damage to grass and soil in pasture can be minimised by:</p> <ul style="list-style-type: none"> • reducing or removing stock when soils are wet • moving stock to new pasture • moving feeders and water troughs at regular intervals or installing them onto permanent hard standing • avoiding using heavy machinery on wet grassland • restricting access to wet areas of the field and rivers/streams/pond banks. |
| <p>SA NI 2.4.2 Hydroponics</p> <p>Hydroponic production is prohibited.</p> <p style="text-align: right;"><i>(EC) 2018/848 Annex II Part I(1.2)</i></p> | |

SA NI 2.5 Fertilisers and soil conditioners

What is this chapter about?

This section covers standards for the fertilisers and soil conditioners that you can use in Soil Association crop production and the conditions for their use.

| Standards | Guidance |
|--|--|
| <p>SA NI 2.5.1 The use of fertilisers and soil conditioners is restricted</p> <ol style="list-style-type: none"> 1. You may only use the fertilisers, soil conditioners and nutrients in standards 2.5.2, if the measures and practices required in standard 2.4.1 are not adequate to meet the nutritional needs of your plants. 2. You must keep records which demonstrate why you need to use the product(s). 3. The use of these products is subject to the specific conditions in the table below. <i>(EC) 2018/848 Annex II Part I(1.9.3) (1.9.8)</i> <i>(EC) 2018/848 Art. 24 (1b)</i> <i>(EC) 2018/848 Art. 9 (3)</i> <i>2021/1165 Art. 2</i> 4. The products in the table below may only be used if they are authorised for your intended use in your country. <i>(EC) 2018/848 Art. 24</i> <i>2021/1165 Art. 2</i> <i>(EC) 2018/848 Art. 9 (3)</i> | <p>You must plan your production system to minimise the need for brought-in nutrients. You must keep documentary evidence of the need to use each product.</p> <p>For each supplementary nutrient you wish to use demonstrate:</p> <ul style="list-style-type: none"> • how you identify a need for supplementary nutrients, such as soil or tissue analysis and, • that the nutrient and the application method and timing is appropriate to your soil type and crop needs <p>You can record the details of how you are meeting the requirements of this standard in your own Crop production plan or complete a 'Crop Management Plan template' which is available on our website. These will be reviewed by the certification team to check that standard requirements are met.</p> <p>Any changes to your plan should be submitted to the certification team for review.</p> <p> Fertiliser and soil conditioner input records.</p> <p>Lists of certified fertiliser products are available on our website.</p> |

SA NI 2.5.2 Permitted fertilisers, soil conditioners and nutrients

| Standards | Guidance |
|--|--|
| <p>SA NI 2.5.3 The use of calcified seaweed is restricted You must not use calcified seaweed, lithothamne or maerl when extracted from the sea as a fertiliser, soil conditioner or nutrient.</p> <p><i>Soil Association higher standard</i></p> | <p>Calcified seaweed that has been naturally washed onto the beach and collected by you to use on your farm is permitted.</p> |
| <p>Why?</p> <p>Calcified seaweed, lithothamne and maerl refer to a group of coralline algae, primarily of the species <i>Phymatolithon calcateum</i> and <i>Lithothamnion corallioides</i>. Calcified seaweed beds are relatively scarce and are important habitats which hold impressive levels of biodiversity, harbouring many rare and commercially valuable species. Owing to their extremely slow growth rate, calcified seaweed beds are very fragile and cannot sustain even limited extraction without deterioration. Commercial extraction from the sea has already led to the destruction of several beds in Europe and current levels of protection provided are unlikely to prevent further destruction and deterioration. We therefore prohibit the use of calcified seaweed extracted from the sea under Soil Association standards.</p> | |
| Standards | Guidance |
| <p>SA NI 2.5.4 The use of peat is restricted You may only use peat in propagating media.</p> <p><i>Soil Association higher standard</i></p> | <p>We are aiming to phase out the use of peat by 2025. To prepare for this, we encourage you to use sustainable alternatives to peat where possible.</p> <p> We are conducting trials to test peat-free alternatives. If you would like to take part in the trials please contact a member of the Standards Team: standards@soilassociation.org</p> |
| <p>Why?</p> <p>Peat is a precious resource that can take thousands of years to form. Peatlands are important habitats for a wide range of species and play a key</p> | |

role in preventing floods and storing carbon. The extraction and burning of peat releases large amounts of carbon dioxide which contributes to global warming. We believe it is important to protect our peatlands and are supporting the development of reliable alternatives to peat for all propagation purposes. We continue to allow the use of peat for propagating while peat-free alternatives are being developed and trialled to prove their reliability for the commercial production of certain crops. We also prohibit the use of peat as bedding material for livestock production see standard 3.8.10.

| Standards | Guidance | | | | | | | | | | | | | | | | | | | | | | | | | | |
|---|---|---|-------|-------------------------------|-----|-----------|-----|---------|-----|---|-------|-------------------|------|--------------------|------|----------|-----|-----------|---|----------|---|---------------------------|-------|--------|-----|------|-----|
| <p>SA NI 2.5.5 The use of guano is prohibited You must not use guano. <i>Soil Association higher standard</i></p> | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| <p style="text-align: center;">Why?</p> <p>Guano harvesting can have very negative impacts on bat and bird colonies. Birds and bats are extremely sensitive to disturbance and guano harvesting practices have resulted in the loss of millions of bats, birds and their associated species.</p> | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Standards | Guidance | | | | | | | | | | | | | | | | | | | | | | | | | | |
| <p>SA NI 2.5.6 Applying manure The total amount of manure you can apply to your organic and in-conversion land, averaged over the whole area, must not be more than 170kg of nitrogen (N) per hectare per year. <i>(EC) 2018/848 Annex II Part I(1.9.4)</i></p> | <p>You must detail the maximum rate of nitrogen from manure that is applied per hectare of your holding per year. In nitrogen vulnerable zones (NVZs) the field limit is 250kg of nitrogen per hectare per year.</p> <p>To help calculate how much nitrogen is applied to your land you can use the table below:</p> <table> <tr> <th>Solid manure (per t or m³)</th><th>N(kg)</th></tr> <tr> <td>Cattle farm yard manure (FYM)</td><td>6.0</td></tr> <tr> <td>Sheep FYM</td><td>7.0</td></tr> <tr> <td>Pig FYM</td><td>7.0</td></tr> <tr> <th>Solid manure (per t or m³)</th><th>N(kg)</th></tr> <tr> <td>Poultry Layer FYM</td><td>19.0</td></tr> <tr> <td>Broiler/turkey FYM</td><td>30.0</td></tr> <tr> <td>Duck FYM</td><td>6.5</td></tr> <tr> <td>Horse FYM</td><td>7</td></tr> <tr> <td>Goat FYM</td><td>6</td></tr> <tr> <th>Slurry/liquid (per 1000l)</th><th>N(kg)</th></tr> <tr> <td>Cattle</td><td>2.6</td></tr> <tr> <td>Pigs</td><td>3.6</td></tr> </table> | Solid manure (per t or m ³) | N(kg) | Cattle farm yard manure (FYM) | 6.0 | Sheep FYM | 7.0 | Pig FYM | 7.0 | Solid manure (per t or m ³) | N(kg) | Poultry Layer FYM | 19.0 | Broiler/turkey FYM | 30.0 | Duck FYM | 6.5 | Horse FYM | 7 | Goat FYM | 6 | Slurry/liquid (per 1000l) | N(kg) | Cattle | 2.6 | Pigs | 3.6 |

|--|---|-------|
| | Separated manures (per 1000l) | N(kg) |
| | Separated cattle slurry, liquid fraction, strainer box | 1.5 |
| | Separated cattle slurry, liquid fraction, weeping-wall | 2 |
| | Separated cattle slurry, liquid fraction, mechanically separated | 3 |
| | Separated cattle slurry, solid Fraction | 4 |
| | Separated pig slurry, liquid fraction | 3.6 |
| | Separated pig slurry, solid fraction | 5 |
| Composts containing manure must be included in your N calculation. Green waste composts are not included because they do not contain a significant amount of available nitrogen when the composting process is complete. We may check the analysis of your green waste compost to ensure this is the case. | | |
| Standards | Guidance | |
| <p>SA NI 2.5.7 Spreading surplus manure You may establish links with other organic holdings to spread surplus organic manure. This must be an on-going arrangement held in writing. The maximum nitrogen limit of 170kg of nitrogen per year per hectare must be calculated on the basis of all the organic production holdings involved in such cooperation. <i>(EC) 2018/848 Annex II Part I(1.9.5)</i></p> | <p>You must document details of your arrangement.</p> <p>An example arrangement would be where you exchange manure for straw or feed.</p> <p>Organic manure can only be spread on organic land.</p> | |
| <p>SA NI 2.5.8 Micro-organisms To improve soil condition or nutrient availability you may use appropriate preparations of micro-organisms. <i>(EC) 2018/848 Annex II Part I(1.9.6)</i></p> | <p>You must check that the product is authorised for use in your country for the intended purpose and it is not a GMO or derived from GMOs.</p> | |
| <p>SA NI 2.5.9 Compost activators For compost activation you may use compost activators made from microbial and plant extracts. <i>(EC) 2018/848 Annex II Part I(1.9.7)</i></p> | <p>Check that the product is authorised for use in your country for the intended purpose and it is not a GMO or derived from GMOs.</p> | |
| <p>SA NI 2.5.10 Biodynamic preparations You may use biodynamic preparations.</p> | <p>Refer to the Demeter biodynamic standards for information on biodynamic preparations. Any animal by-products used must meet these standards.</p> | |

SA NI 2.6 Controlling pests and disease

What is this chapter about?

Organic farming is a holistic agricultural production system that works with, rather than against, natural systems. Weeds are controlled, and pest and disease damage is reduced, using techniques which are sustainable and promote environmental preservation. It is fundamentally important that organic principles and practices are the primary tools in maintaining viable and healthy production systems. Any additional inputs should be viewed only as supplements, not substitutes, to the system and should only be called upon when absolutely necessary.

This chapter explains how organic farmers must prevent and control pests and disease, which plant protection products are permitted on organic crops and the conditions of use for these products.

| Standards | Guidance |
|---|---|
| <p>SA NI 2.6.1 Pest, disease and weed management</p> <p>The design and management of your organic system must rely primarily on organic preventative measures and practices to control and prevent damage caused by pests, diseases and weeds. This can include:</p> <ul style="list-style-type: none">a) Creating fertile soils with high biodiversityb) Choosing appropriate species and varieties, including heterogenous material, resistant to pests and diseasesc) Grafting onto resistant rootstockd) Appropriate crop rotationse) Protecting and encouraging natural enemies of pests. You may also introduce natural predatorsf) cultivation techniques such as biofumigation, mechanical and physical methodsg) Carefully planning planting datesh) Pre-emergence and post-emergence mechanical weedingi) Thermal processes, such as solarisation and, in the case of protected crops, shallow steam treatment of the soil (to a maximum depth of 10 cm)j) Using steam to sterilise buildings and equipmentk) Using good husbandry and hygiene practices to limit the spread of any pests or disease. <p style="text-align: right;"><i>(EC) 2018/848 Art. 6 (d)</i> <i>(EC) 2018/848 Annex II Part I(1.10.1)</i></p> | <p>Storage areas should be cleaned appropriately and if necessary, left empty for a suitable length of time before use, to act as a disease and insect break.</p> |

SA NI 2.6.2 The use of pesticides and plant protection products is restricted

- 1) You may **only** use the products listed in standard 2.6.3 below for pest, disease and weed control when there is an established threat to your crops, and when plants cannot be adequately protected by organic preventative measures and practices described in standard 2.6.1.
- 2) You must keep records which demonstrate why you need to use the product.

(EC) 2018/848 Annex II Part I(1.10.2)

(EC) 2021/1165 Art. 1

- 3) The products in the table below may only be used if they are authorised for your intended use in your country.

(EC) 2018/848 Art. 24

(EC) 2021/1165 Art. 5

(EC) 2018/848 Art. 9 (3)

Plant production records need to specify why plant protection products need to be used.

At inspection we will look for evidence to show that you have followed the conditions for treatment. This may include:

- records of crop monitoring
- records of pest/disease levels
- preventative practices in place
- test results
- records of products used, and
- methods used to prevent damage to non-target species

You can record the details of how you are meeting the requirements of this **standard in your own Crop production plan or complete a 'Crop Management Plan template' which is available on our [website](#)**. These will be reviewed by the certification team to check that standard requirements are met.

Any changes to your plan should be submitted to the certification team for review.

It is your responsibility to check the products from the table below are authorised for your intended use in your country. In the UK a list of legally approved products and their specific use(s) is published on the [Chemicals Regulation Directorate](#). You will need to ensure that legal Health and Safety requirements are adhered to when applying products.

This applies to all parts of the organic or in-conversion holding including areas not used for crop production such as around buildings, paths, tracks and hedgerows.

SA NI 2.6.3. Permitted pesticides and plant protection products

All substances listed in this table must comply at least with the conditions for use as specified in the Annex of Commission Implementing Regulation (EU) No 540/2011. More restrictive conditions for use for organic production are specified in the second column of the table.

(EC) 2018/848 Art. 24(1a)

| Name of product | Description, compositional requirements, conditions for use | Soil Association additional conditions |
|---|--|--|
| Substances of plant or animal origin | | |
| Allium sativum (Garlic extract) | | |
| Azadirachtin extracted from <i>Azadirachta indica</i> (Neem tree) | | |
| Beeswax | Only as pruning agent/wound protectant | |
| COS-OGA | | |
| Eugenol | | Preferably of natural origin |
| Geraniol | | Preferably of natural origin |
| Hydrolysed proteins excluding gelatine | | |
| Laminarin | Kelp must be either grown organically according to standard 15.7.4 (Art. 6d) or harvested in a sustainable way according to standard 15.7.3 (Art. 6c) of the Soil Association seaweed standards. | |
| Maltodextrin | | |
| Pheromones | Only in traps and dispensers | |
| Plant oils | All uses authorised, except herbicide. | |
| Pyrethrins | Only from plant origin | |
| Quassia extracted from <i>Quassia amara</i> | Only as an insecticide, repellent | |
| Repellents by smell of animal or plant origin/sheep fat | Only on non-edible parts of the crop and where crop material is not ingested by sheep or goats | |
| <i>Salix</i> spp. Cortex (aka willow bark extract) | | |
| Thymol | | Preferably of natural origin |

| Basic substances | | |
|--|---|---------------------|
| Basic substances based on food | <p>Only those basic substances within the meaning of Article 23(1) of Regulation (EC) No 1107/2009 that are covered by the definition of 'foodstuff' in Article 2 of Regulation (EC) No 178/2002 and have plant or animal origin.</p> <p>Substances not to be used as herbicides, but only for the control of pests and diseases.</p> <p>Basic substances are substances which are useful in plant protection, but are not predominantly used for this purpose. Many of them have traditionally been used in organic farming and include numerous foodstuffs of plant or animal origin.</p> <p>Substances that fall under this category are:</p> <ul style="list-style-type: none"> • Lecithins • Sucrose • Fructose • Vinegar • Whey • Equisetum arvense L. • Chitosan hydrochloride (Obtained from sustainable fisheries or organic aquaculture) <p>Contact the certification team for more information</p> | |
| Magnesium hydrogen metasilicate silicate material (Talc E553b) | Must be of food grade | |
| ABE-IT 56 (components of lysate of <i>Saccharomyces cerevisiae</i> strain DDSF623) | Not from GMO origin Not produced by using growing media of GMO origin | |
| Aqueous extract from the germinated seeds of sweet lupinus albus | | |
| Micro-organisms or substances produced by or derived from micro-organisms | | |
| Micro-organisms | Not from GMO origin | |
| Spinosad | | Not from GMO origin |
| Cerevisane | | Not from GMO origin |

| | | |
|---|---|-----------------------------|
| Other substances | | |
| Aluminium silicate (Kaolin) | | |
| Calcium hydroxide | Fungicide, only in fruit trees, including nurseries, to control <i>Nectria galligena</i> | |
| Carbon dioxide | | |
| Copper compounds in the form of: <ul style="list-style-type: none"> • copper hydroxide • copper oxychloride • copper oxide • Bordeaux mixture • tribasic copper sulphate | Guidance In compliance with PPP legislation you must check the pesticide register for the authorisation of the product you plan to use. You must comply with all specifications including the application limit set by the authorisation for the product you plan to use. | |
| Diammonium phosphate | Only as attractant in traps | |
| Ethylene | | |
| Fatty acids | All uses authorised, except herbicide | |
| Ferric pyrophosphate | | |
| Ferric phosphate (iron (III) orthophosphate) | Preparations to be surface-spread between cultivated plants. | |
| Hydrogen peroxide | For seed treatment of lettuce and ornamentals and for disinfection of agricultural cutting tools used in <i>Solanaceae</i> . | |
| Kieselgur (diatomaceous earth) | | |
| Lime sulphur (calcium polysulphide) | | |
| Paraffin oil | | |
| Potassium and sodium hydrogen carbonate (aka potassium/sodium bicarbonate) | | |
| Pyrethroids (only deltamethrin or lambda-cyhalothrin) | Only in traps with specific attractants; only against <i>Bactrocera oleae</i> and <i>Ceratitis capitata</i> , and <i>Rhagoletis complete</i> | Not licensed for use in NI. |
| Quartz sand | | |
| Sodium chloride | All uses authorised, except herbicide | |
| Sulphur | | |
| Standards | Guidance | |
| SA NI 2.6.4. Using products in traps and dispensers 1. For products and substances used in traps and dispensers, except pheromones, the traps | | |

| | |
|--|--|
| <p>and/or dispensers must prevent the products and substances from being released into the environment and prevent contact between the products and substances and the crops being cultivated.</p> <p>2. The traps must be collected after use and disposed of safely.</p> <p><i>(EC) 2018/848 Annex II Part I(1.10.3)</i></p> | |
|--|--|

SA NI 2.7 Seeds, plant propagation and potted plants

What is this chapter about?

The aim of these standards is to ensure a broad range of varieties of high-quality organic seeds are available that will meet your production, environmental and market needs. At the same time it is important that you, the grower, have access to suitable seeds for organic production even when they are not yet available as organic.

| Standards | Guidance |
|--|---|
| <p>SA NI 2.7.1 Producing organic seed and propagating material</p> <p>1. To produce organic seeds and propagating material you must grow the mother plant to organic standards for at least one generation, or for perennial plants, two growing seasons.</p> <p>2. For the production of organic varieties suitable for organic production, the organic breeding activities shall be conducted under organic conditions and shall focus on enhancement of genetic diversity, reliance on natural reproductive ability, as well as agronomic performance, disease resistance and adaptation to diverse local soil and climate conditions.</p> <p>3. All multiplication practices except meristem culture shall be carried out under certified organic management.</p> <p><i>(EC) 2018/848 Annex II Part I(1.8.1)(1.8.2) (1.8.4)</i></p> | |
| <p>SA NI 2.7.2 Registering organic seed or seed potatoes</p> <p>1. If you wish to sell organic or in-conversion plant reproductive material you can register your varieties that are available as organic on the seed database of organic seed availability. For registration, the supplier must:</p> | <p>In NI OrganicXseeds UK is the official UK database of organic seed availability.</p> |

| | |
|---|--|
| <p>a) Demonstrate that the supplier or the last operator, in cases where the supplier is only dealing with pre-packaged seed or seed potatoes, holds organic certification to produce organic seed or seed potatoes.</p> <p>b) Demonstrate that the seed or seed potatoes to be placed on the market comply with the general requirements applicable to seed and seed potatoes.</p> <p>c) Provide the following information:</p> <ul style="list-style-type: none"> i) the scientific name of the species and the variety denomination ii) the name and contact details of the supplier or representative iii) the area where the supplier can deliver the seed or seed potatoes to the user and the usual time needed for the delivery iv) the country or region in which the variety is tested and approved for inclusion in the common catalogues of varieties of agricultural plant species and vegetable species as defined in Council Directives 2002/53/EC on the common catalogue of varieties of agricultural plant species and 2002/55/EC on the marketing of vegetable seed v) the date from which the seed or seed potatoes will be available vi) the name and/or code number of the control authority or control body certifying the organic activity. <p>d) This information must be kept up to date and the supplier must immediately inform the manager of the database if any of registered varieties are no longer available.</p> <p style="text-align: right;"><i>(EC) 2018/848 Art. 26(2)(2a)</i></p> | <p>Any variety which has not been registered in the database will be considered unavailable when certification bodies are making decisions on granting derogations to allow the use of non-organic seeds.</p> <p>If the supplier does not provide all the information described in point 1 c) the manager of the database may, with the approval by the competent authority of the Member State, refuse the supplier's application for registration or delete a previously accepted registration.</p> <p>A fee may be charged for each registration which will represent the cost of inserting and maintaining the information in the database. For more details please see the OrganicXseeds website.</p> |
| <p>SA NI 2.7.3 Seed and plant reproductive material</p> <p>1) When using seed and plant reproductive material suitable for organic production you must, in order of preference:</p> <ul style="list-style-type: none"> a) use organic seeds and plant reproductive material when a suitable variety is available b) use in-conversion seeds and plant reproductive material when a suitable variety is available | <p> You can find details of available organic or in-conversion seeds and seed potatoes at www.organicxseeds.co.uk.</p> <p>If you are using home saved in-conversion seed you do not need to refer to this database.</p> |

| | |
|---|--|
| <p>2) You may use home saved organic or in conversion seed.</p> <p><i>(EC) 2018/848 Annex II Part I(1.8.1)(1.8.3)</i> <i>(EC) 2018/848 Annex II Part I(1.8.5.1)</i></p> | |
| <p>SA NI 2.7.4 Using non-organic seed and vegetative propagating material</p> <p>When there are no organic or in-conversion seeds or vegetative propagating material of a suitable variety available you may use non-organic. Your certification body has to approve all permissions to use non-organic untreated seeds or vegetative propagating material. The conditions under which your certification body will grant permission for non-organic seed and seed potatoes are set out in standard 2.7.5.</p> <p><i>(EC) 2018/848 Annex II Part I(1.8.5.1)</i></p> | <p>You can find details of available organic or in-conversion seeds and seed potatoes at www.organicxseeds.co.uk. You can submit derogation requests online or you can ask us for a seed derogation form. You will need to get permission before you use any non-organic seed or seed potatoes. Any derogation will only be valid for one growing season.</p> <p>NICA will approve all permissions to use non-organic untreated seeds or vegetative propagating material.</p> <p>The use of non-organic and vegetative propagating material will expire the 31st December 2036. From the 1st January 2029 the European Commission may extend or bring forward this date based on reporting of availability of organic seed and vegetative propagating material.</p> |
| <p>SA NI 2.7.5 Conditions under which non-organic seed may be authorised</p> <p>The conditions under which the authorisation to use non-organic seed or seed potatoes may be granted are as follows:</p> <ul style="list-style-type: none"> a) where no variety of the species which the user wants to obtain is registered on the www.organicxseeds.co.uk database b) where no supplier, meaning an operator who markets seed or seed potatoes to other operators, is able to deliver the seed or seed potatoes before sowing or planting in situations where you have ordered the seed or seed potatoes in reasonable time c) where the variety which you wish to obtain is not registered on the www.organicxseeds.co.uk database, and you can demonstrate that none of the registered alternatives of the same species are appropriate and that the authorisation therefore is significant for your production d) where it is justified for use in research, tests in small-scale field trials, product innovation, or for variety conservation purposes | |

| | |
|---|---|
| <p>agreed by the competent authority of the Member State. The authorisation must be granted before the sowing of the crop and the derogation will only be valid for one growing season.</p> <p>e) The competent authority may grant general authorisations for all producers where conditions in point (a) and(c) are fulfilled. <i>(EC) 2018/848 Annex II Part I(1.8.5.1)(1.8.5.4)(1.8.5.5)(1.8.5.7.1)(a)(b)</i></p> | |
| <p>SA NI 2.7.6 Exceptional rules on Seed and plant propagating material due to catastrophic circumstances</p> <ol style="list-style-type: none"> 1. When the use of organic or in conversion plant reproductive material is not possible due to a catastrophic event a derogation to use non-organic plant reproductive material may be granted by the competent authority. 2. Plant reproductive material must not have been treated with plant protection products that are not listed in standard 2.6.3, unless your competent authority requires it for plant health (phytosanitary) reasons. 3. Where appropriate, conversion periods set out in standard 2.1.2 must be complied with. 4. Upon approval by the competent authority, you must keep documentary evidence of the use of this exception. <i>(EC) 2018/848 art. 22</i> <i>(EC) 2020/2146 art. 3(1)</i> | <p>Please refer to standard 1.6.4 for more detailed rules on catastrophic events.</p> <p>The certification team can submit a request to the competent authority on your behalf. This permission needs to be in place before any action takes place.</p> |
| <p>SA NI 2.7.7 Organically available species</p> <ol style="list-style-type: none"> 1. When species for which we know organic seed or seed potatoes are available in sufficient number of varieties and quantities in all parts of the Community, they will be listed in the guidance to this standard. 2. Species listed cannot be grown from non-organic seed or seed potatoes unless it is justified and agreed by your certification body for use in research, to test in small scale field trials, product innovation, or for variety conservation purposes. <i>(EC) 2018/848 Annex II Part I(1.8.5.5)</i> | <p>Currently there are no species listed in Annex X.</p> |
| <p>SA NI 2.7.8 Chemically treated seed</p> <p>Non-organic seed and seed potatoes must not be treated with plant protection products that are not listed in standard 2.6.3, unless your</p> | |

| | |
|--|---|
| <p>competent authority requires it for plant health (phytosanitary) reasons.</p> <p style="text-align: right;"><i>((EC) 2018/848 Annex II Part I(1.8.5.3) (EC) 2018/848 Annex II Part I(1.10.2) EC) 2021/1165 Art.1)</i></p> | |
| <p>SA NI 2.7.9 Buying transplants If you use transplants (bare root, blocks, modules, trees, soft fruit bushes) they must have been grown to organic standards by a certified organic producer.</p> <p style="text-align: right;"><i>(EC) 2018/848 Art.1</i></p> | <p>Transplants are plants which are intended to be grown on in an organic production system within the soil before being harvested and sold as organic. Therefore, transplants are not plant propagating material, but represent a stage of plant production and so must be grown to organic standards.</p> |
| <p>SA NI 2.7.10 Growing transplants To produce transplants for use in organic growing, you may only use substrates made from materials in standard 2.5.2. Manure and plant material must be organic where available and preferably composted.</p> <p style="text-align: right;"><i>(EC) 2018/848 Annex II Part I(1.9.2)(1.9.3) (EC) 2021/1165</i></p> | |
| <p>SA NI 2.7.11 Soil-based production</p> <ol style="list-style-type: none"> 1. Plants must be grown in soil in connection with the subsoil and bedrock. 2. The following are excluded from this requirement: <ol style="list-style-type: none"> a) plant propagation b) aquatic plant production c) plants in pots or containers (including salad cress) sold direct to consumers still in their pots, which are not intended to be grown on or harvested before they are sold d) sprouted seeds which include sprouts, shoots and cress, solely living on the nutritional reserves available in the seeds, by moistening them in potable water, provided that the seeds are organic. The use of growing medium shall be prohibited, except the use of an inert medium intended solely to keep the seeds moist when the components of that inert medium are permitted in these standards. e) the obtaining of chicory heads, including by dipping them in clear water, provided that the plant reproductive material is organic. The use of a growing medium shall be allowed only | <p> Records of:</p> <ul style="list-style-type: none"> • substrates used and additional nutrients and other inputs applied • seeds or vegetative propagating material used • sales <p> A sourcing requirement applies for SA processors.</p> <p>Point 3 applies to both edibles and ornamentals.</p> <p>Note that hydroponic production is prohibited (Standard 2.4.2).</p> |

| | |
|---|--|
| <p>when its components are authorised for this use in compliance with these standards.</p> <p style="text-align: right;"><i>(EC) 2018/848 Art. 3(70)</i> <i>(EC) 2018/848 Annex II Part I(1.1)(1.3)(1.4)</i></p> | |
| <p>3. Plants in pots or containers falling under category 2c may be called organic if:</p> <ul style="list-style-type: none"> a) the substrate is made of at least 51% (by fresh weight of the end product) of materials from organic farming origin b) no more than 49% of the substrate is made up of non-organic manure and compost which meets standard 2.5.2 c) the substrate provides more than 50% of their nutrient needs, until the point of sale d) you make sure the substrate is biologically active e) you meet all other relevant standards f) the entire plant and the pot are sold together g) you do not use peat or slaughterhouse wastes, and h) you do not use soil from organic farms. <p style="text-align: right;"><i>Soil Association higher standard</i></p> | |
| <p style="text-align: center;"><i>Why?</i></p> <p>Production in the soil is a fundamental principle of organic production, so where crops are grown, harvested and sold as organic they must be grown in the soil. In some instances a stage of production of an organic plant has to be out of the soil, but this should be limited only to plant propagation. However, where potted plants are sold direct to final consumers as organic they may not be planted into the soil to grow on further. In these cases, each potted plant should meet requirements to ensure organic integrity up to this point. In the absence of organic regulation, we have produced this set of standards for the production of organic potted plants, with agreed guidance from the competent authority.</p> | |

SA NI 2.7.12 -Marketing and production of organic heterogenous material - scope

1. Plant reproductive material of **organic heterogeneous material** may be marketed without complying with the requirements for registration and certification of categories for pre-basic, basic and certified material. Neither are they required to meet with the requirements for other categories, which are set out in Directives 66/401/EEC, 66/402/EEC, 68/193/EEC, 98/56/EC, 2002/53/EC, 2002/54/EC, 2002/55/EC, 2002/56/EC, 2002/57/EC, 2008/72/EC and 2008/90/EC or acts adopted pursuant to those Directives other than those referenced in these standards.
2. **Organic heterogenous reproductive materials** include:
 - a) agricultural and vegetable species,
 - b) vegetable propagating material other than seeds,
 - c) propagating material of ornamental plants,
 - d) vine propagating material and fruit plant propagating material
3. For plant reproductive material to be included within the scope of these standards, they must meet the definition provided in the guidance to this standard as well as the wider organic requirements listed in these standards.
4. The requirements of these standards do not include the transfer of limited quantities of plant reproductive material of organic heterogeneous material intended for research on, and development of, organic heterogeneous material.

(EC) 848/2018 art. 3(18)

(EC) 848/2018 art. 13 (1)

(EC) 2021/1189 art. 1

(EC) 2021/1189 art. 2(1)

(EC) 2021/1189 art. 3

For the purpose of these organic standards **organic heterogenous material** refers to a plant grouping within a single botanical taxon of the lowest known rank which:

- (a) presents common phenotypic characteristics;
- (b) is characterised by a high level of genetic and phenotypic diversity between individual reproductive units, so that that plant grouping is represented by the material as a whole, and not by a small number of units;
- (c) is not a variety within the meaning of Article 5(2) of Council Regulation (EC) No 2100/94 (2);
- (d) is not a mixture of varieties; and
- (e) has been produced in a certified organic system;

SA NI 2.7.13 - Registration, marketing and maintenance of organic heterogenous material

1. To register **Organic** heterogenous reproductive material the supplier shall notify the responsible official bodies for the registration of seed material by means of a dossier containing:
 - a) the contact details of the applicant;
 - b) the species and denomination of the organic heterogeneous material;
 - c) the description of the main agronomic and phenotypic characteristics that are common to that plant grouping, including breeding methods, any available results from tests on those characteristics, the country of production and the parental material used;
 - d) a representative sample
2. organic heterogenous material may be generated by one of the following techniques:
 - a) crossing of several different types of parental material, using crossing protocols to produce diverse organic heterogeneous material by bulking of the progeny, repeatedly re-sowing and exposing the stock to natural and/or human selection;
 - b) on-farm-management practices, including selection, establishing or maintaining material, which is characterized by a high level of genetic diversity;
 - c) any other technique used for breeding or production of organic heterogeneous material, taking into account particular features of propagation.
3. organic heterogeneous material shall be identifiable on the basis of all of the following elements:
 - a) the parental material and the production scheme used in the crossing for creation of the organic heterogeneous material or the history of the material and the on-farm management practices, including whether the selection has occurred naturally and/or through human intervention;
 - b) the country of breeding or production;
 - c) characterisation of the common key characters and of the phenotypic heterogeneity of the material.

The dossier shall be sent by registered letter, or by any other means of communication accepted by the official bodies, with confirmation of receipt requested.

Three months after the date shown on the return receipt, provided that no additional information was requested or that no formal refusal for reasons of incompleteness of the dossier or non-compliance was communicated to the supplier, the competent authority shall be deemed to have acknowledged the notification and its content.

On approval the organic heterogenous material may be listed on a database free of charge.

'parental material' means any plant material the crossing or propagation of which resulted in organic heterogeneous material;

The **denomination** shall not cause difficulties as regards recognition or reproduction and shall not:

- be identical or likely to be confused with a denomination to which another variety or organic heterogeneous material of the same or of a closely related species is registered.
- be identical or likely to be confused with other designations which are commonly used for the marketing of goods or which have to be kept free under other legislation;
- mislead or cause confusion concerning the characteristics, the value or the identity of the organic heterogeneous material, or the identity of the breeder.

The **description** of organic heterogeneous material shall include **all** of the following elements:

- the phenotypic characterisation of the key characters which are common to the material, together with the description of the heterogeneity of the material by characterising the phenotypic diversity observable between individual reproductive units;
- documentation of its relevant characteristics, including agronomic aspects such as regards yield, yield stability, suitability

| | |
|--|--|
| <p>4. Where maintenance is possible you shall preserve the main characteristics of the material at the time of its notification, by maintaining it as long as it remains on the market. That maintenance shall be undertaken according to accepted practices adapted to the maintenance of such heterogeneous material.</p> <p>5. The operator responsible for the maintenance shall keep records of duration and content of maintenance.</p> <p style="text-align: right;"> <i>(EC) 848/2018 art. 13(2)</i> <i>(EC) 2021/1189 art. 2(2)</i> <i>(EC) 2021/1189 art. 4</i> <i>(EC) 2021/1189 art. 5</i> <i>(EC) 2021/1189 art. 8(1)(2)</i> <i>(EC) 2021/1189 art. 10</i> <i>(EC) 2021/1189 Annex I B</i> </p> | <p>for low input systems, performance, resistance to abiotic stress, disease resistance, quality parameters, taste or colour;</p> <ul style="list-style-type: none"> • any available results from tests concerning the agronomic characteristics; • a description of the type of technique used for the breeding or production method of the organic heterogeneous material; • a description of the parental material used to breed or produce the organic heterogeneous material and own production control programme used by the operator concerned with a reference to the techniques used to generate the material. • a description of the on-farm management and selection practices • a reference to the country of breeding or production, with information on the year of production and description of the pedo-climatic conditions; <p>*Record keeping requirements*</p> <ul style="list-style-type: none"> - A copy of the application dossier, your organic contract and certificate shall be kept for inspection. - Records demonstrating traceability and identification of generation techniques and parental material of the organic heterogeneous material. - <p>The following requirements shall be kept on record for at least five years.</p> <ul style="list-style-type: none"> - The name of the species and denomination used for each notified organic heterogeneous material; type of technique used for the production of organic heterogeneous material shall be kept on record. - characterisation of the notified organic heterogeneous material - location of breeding of organic heterogeneous material and location of production of the reproductive material of the organic heterogeneous material - surface area for the production of organic heterogeneous material and quantity produced |
|--|--|

NI SA 2.7.14 Sanitary quality, analytical purity and germination requirements

1. Organic heterogeneous material shall comply with the provisions of Regulation (EU) 2016/2031, Commission Implementing Regulation (EU) 2019/2072 (16) and the other relevant acts adopted pursuant to Regulation (EU) 2016/2031 concerning the presence, and the measures against, Union quarantine pests, protected zone quarantine pests and Union regulated non-quarantine pests.
2. For the production and marketing of organic heterogeneous material the statutory requirements, listed in the guidance of this standard, shall apply depending on the category of plant reproductive material.
3. The reproductive material of organic heterogenous material described in these standards shall only apply with regard to the analytical purity and germination requirements for seed and the quality and health requirements for other propagating material. The material does not need to comply with varietal identity and varietal purity and field inspection requirements for varietal identity and varietal purity requirements for statutory regulations described in the guidance to these standards.
4. You may apply for a derogation to place on the market organic heterogenous material that does not meet the germination requirements for statutory regulations described in this standard. If granted, you must indicate the germination rate of the seed concerned on the label or directly on the package.

(EC) 2021/1189 Art.6

For the production and marketing of organic heterogeneous material the following provisions listed in the table below shall apply

| Plant reproductive material | Statutory requirements |
|---|--|
| fodder plant species (listed in Article 2(1)(A) of Directive 66/401/EEC) | <ul style="list-style-type: none"> point 1 and the last column of the table in point 5 of Annex I to Directive 66/401/EEC, and Section I, points 2 and 3 and Section III of Annex II to Directive 66/401/EEC. |

SA NI 2.8 Standards for mushroom production

What is this chapter about?

This section has specific standards for cultivating mushrooms. You must also comply with the applicable standards in Chapter 1 'General standards for farming and growing' and Chapter 2 'Standards for organic land and crops'.

| Standards | Guidance |
|---|---|
| <p>SA NI 2.8.1 Substrates for mushroom production</p> <p>1. You may only use the following substrates for mushroom production:</p> <ol style="list-style-type: none">manure from organic production and/or farms in their second year of conversionother products of agricultural origin produced according to organic production methodspeat which has not been chemically treatedwood which has not been chemically treated after fellingmineral products permitted in standard 2.5.2.water and soil. <p><i>(EC) 2018/848 Annex II Part I(2.1)</i></p> | <p>You may use in-conversion products produced to organic standards.</p> <p> We are aiming to phase out the use of peat by 2025. To prepare for this, we encourage you to use sustainable alternatives to peat where possible.</p> <p>We are conducting trials to test peat-free alternatives. If you would like to take part in the trials please contact a member of the Standards Team: standards@soilassociation.org</p> |
| <p>SA NI 2.8.2 Using non-organic manure</p> <p>1. You may only use non-organic manure in the substrate if:</p> <ol style="list-style-type: none">manure from an organic farm is not available, andnon-organic manure does not exceed 25% of the substrate. <p>2. The percentage must be calculated as the fresh weight, before composting, of all components except the casing and any added water.</p> <p><i>(EC) 2018/848 Annex II Part I(2.1) (a)(ii)</i></p> | <p>You must be able to demonstrate that organic manure is not available. For example by:</p> <ul style="list-style-type: none">providing correspondence with local organic producers who may be able to supply you with manureevidence of advertising for organic manure. <p>We recognise that the principle of returning organic manures to organic land often means that organic manures are not readily available.</p> |

SA NI 2.9 Additional standards for watercress production

What's this chapter about?

The EU Organic Regulation does not contain detailed rules for organic watercress production. In their absence, the following standards have been adapted by applying *mutatis mutandis* to provide a certification framework for organic watercress production. You must also comply with the applicable standards in Chapter 1 'General standards for farming and growing' and Chapter 2 'Standards for organic land and crops'.

| Standards | Guidance |
|---|---|
| SA NI 2.9.1 Conversion You must convert your whole watercress production unit at the same time with a minimum conversion period of two crop cycles. <i>(EC) 2018/848 Art. 9 (2) (7) (10)</i> <i>(EC) 2018/848 Art. 10 (3)</i> <i>(EC) 2018/848 Annex II Part I(1.7)</i> | A crop cycle includes planting and clearing the beds. New land may enter conversion from the date that the we receive your application (or a specified date thereafter). |
| SA NI 2.9.2 Water source and quality 1. Water must be of drinking quality. 2. You must use water from natural springs or artesian wells which cannot be polluted by surface water or any other source of pollution. 3. You may use pumped borehole water: a) in the summer when the river flow is too low, or b) to redirect water from natural springs elsewhere on the holding. <i>(EC) 2018/848 Art. 4(c)</i> | In the UK, potable water must meet the standards laid down in The Water Supply (Water Quality) Regulations 2016 . |
| SA NI 2.9.3 Bed management You must reuse the gravel and crop residues that are removed when you clean the beds and, where possible: a) separate and re-use the gravel on the beds b) compost the crop residues and solid material from the settling tanks and spread onto organic land. <i>(EC) 2018/848 Art. 6 (c)</i> | If you are unable to re-use the gravel, you must give the reason and detail what is done with this material. You may spread the compost and solid material from the settling tanks onto local non-organic land if you do not have access to suitable organic land. |
| SA NI 2.9.4 Feeding your plants Your growing crop must derive the majority of each nutrient from the natural water. Where the nutritional needs of your crops cannot be met, you may make up the balance from | If you wish to use inputs, describe in this section how you identified a need for inputs and how you prevent over-fertilisation. You must measure levels of phosphate and other added nutrients in the water regularly. |

| | |
|---|--|
| <p>nutrient sources using the inputs allowed in section 2.5. The dosing of fertilisers must match, as closely as possible, the crop demands.</p> <p style="text-align: right;"><i>(EC) 2018/848 Art. 6(a)</i> <i>(EC) 2018/848 Annex II Part I(1.9.3)</i> <i>(EC) 2021/1165 Art.2</i></p> | <p>Note - we expect you to measure levels weekly, but with our agreement, and provided the tests reveal no problems, you may do it less frequently.</p> |
| <p>SA NI 2.9.5 Water quality Your watercress operation must not adversely affect the water quality in the receiving watercourse.</p> <p style="text-align: right;"><i>(EC) 2018/848 Art. 4(c)(e)</i> <i>2018/848 Art. 5(a)(c)</i></p> | <p>To demonstrate this you may need to measure and record water quality. This would include details on what you are testing for and the frequency of testing. We would expect you to test for levels of nutrients, phosphate and suspended solid concentrations in your discharge water. This must demonstrate that your watercress operation is not adversely affecting the water quality in the receiving watercourse. Where nutrient levels in incoming groundwater are already high, this may be demonstrated through an inlet/outlet differential.</p> <p>Target parameters for specific river systems in the UK are set by the Environment Agency.</p> |

SA NI 2.10 Standards for wild harvesting

What's this chapter about?

These standards cover the harvesting of **plants, plant products and fungi from the wild (but not animals)**. Some people also call this 'wild crafting'. These standards cover a wide range of products and geographical areas. The aim of our standards is to make sure that when you harvest wild products:

- the yields you take are sustainable for the long term preservation of the target species
- you protect the biodiversity of the area, and
- you prevent contamination.

You must also comply with the applicable standards in Chapter 1 'General standards for farming and growing' and Chapter 2 'Standards for organic land and crops'.

| Standards | Guidance |
|--|--|
| <p>SA NI 2.10.1 Scope</p> <ol style="list-style-type: none"> 1. The following standards apply to the collection of wild plants, plant resources and fungi, growing naturally in natural areas, forests and agricultural areas 2. These standards do not apply to products from hunting and fishing wild animals. <p style="text-align: right;">(EC) 2018/848 Art. 2(1) (EC) 2018/848 Annex I (EC) 2018/848 Annex II Part I(1.9.1)(1.9.2)(1.9.3)(1.9.8) (EC) 2018/848 Annex II Part I(1.10.1)(1.10.2) (EC) 2018/848 Annex II Part I(1.8.1)(1.8.2) (EC) 2018/848 Annex II Part I(1.11)(2.2)</p> | |
| <p>SA NI 2.10.2 Wild harvest plan</p> <ol style="list-style-type: none"> 1. Before starting your organic enterprise you must write a plan detailing how you will comply with these organic standards. The plan must be updated when you make any significant changes to your activity. 2. The plan must include a full description of your premises, units and activities. Including; <ol style="list-style-type: none"> a) storage and production premises, collection areas and, where applicable, processing and/or packaging premises | <p>You will need to provide:</p> <ul style="list-style-type: none"> • A map of the collection area which shows the target populations as well as other sensitive species and habitats • A description of the species, Latin and local names, and collected parts/resources • A management plan for sustainable wild harvest. For more information on requirements refer to standard 2.10.4 and 2.10.5. • A management plan for assessment and regular monitoring of the target resources and habitats • The planned harvesting quantities • Collectors' registers in order to make sure that all collectors are well trained and know the rules of collection |

| | |
|--|---|
| <p>b) the date of the last input on the collection area of any agrochemicals, artificial fertilisers and other materials which are not permitted in these organic standards.</p> <p>3. Where third parties are involved in the management or control of the wild harvest collection area, you must provide guarantees from them which ensure that standards 2.10.3, 2.10.4 and 2.10.5 are complied with.</p> <p style="text-align: right;"><i>2018/848 Art.39(1)(d)(i)</i></p> | <ul style="list-style-type: none"> • How you ensure collectors are trained, knowledgeable and competent in the following aspects: <ul style="list-style-type: none"> i. Plant to be collected (including which parts, harvesting area, minimum quality requirements etc.) ii. Sustainable collection methods iii. Post-harvest handling of collected material iv. Any annual written authorisation from local and national regulatory bodies or other authorities where available. <p>Your collection instructions must be regularly reviewed and revised if necessary based on site and species-specific monitoring of collection impacts. If you make any significant changes in your operation, inform the certification team . Significant changes are, for example, change of location of an activity, change of ownership, change of contact person or alteration of certified production.</p> |
| <p>SA NI 2.10.3 Wild harvest land treated with prohibited products</p> <p>The area which you use for wild harvesting must not have been treated with products which are not permitted in these organic standards during the last three years before harvest.</p> <p style="text-align: right;"><i>(EC) 2018/848 Annex II Part I(2.2)(a)</i></p> | <p>You must be able to demonstrate what effective measures are taken to ensure that any collection areas are not affected by contamination with prohibited products.</p> <p>On a map of the collection area identify any areas or potential sources of contamination (towns, industry, landfills, intensive agriculture areas, etc.)</p> |
| <p>SA NI 2.10.4 Maintaining wild plant resources</p> <p>The wild harvesting of plant resources must maintain the species in the collection area.</p> <p style="text-align: right;"><i>(EC) 2018/848 Annex II Part I(2.2.1)(b)</i></p> | <p>You must hold information on:</p> <ol style="list-style-type: none"> 1. The global and/or national/regional conservation status of the target species. 2. The collection methods and management practices including: <ol style="list-style-type: none"> a. How target species are adequately identified e.g. voucher (reference) specimens provided from the collection site b. A map of collection areas and location of target populations (preferably a 1:50,000 scale map or less) c. Species-specific harvest methods, including collected parts, collection method and collection period d. Minimum biological age/size class allowed for collection for each target species and collection site e. Maximum allowed collection limits (quantities, frequency, periods) 3. How you ensure that the rate (intensity and frequency) of target resource collection does not exceed the target species' ability to regenerate over the long term. To include: |

| | |
|---|--|
| | <p>a. Baseline information/inventory on target species in the collection area, including population size, distribution, population structure (size/age classes), rate of reproduction/growth/regeneration.</p> <p>How you use species-specific baseline information, resource assessment and/or monitoring data on collection impacts to inform your maximum collection quantities, frequencies and periods.</p> <p>Compliance to Principle 1 of the FairWild Standard demonstrates that you are meeting the requirements of this standard.</p> |
| <p>SA NI 2.10.5 Preventing negative environmental impacts The collection activities must not negatively impact the habitat and other wild species in the collection area. <i>(EC) 2018/848 Annex II Part I(2.2)(a)</i></p> | <p>You must hold information about:</p> <ol style="list-style-type: none"> 1. Anyrare, threatened or endangered species and habitats that are likely to be affected by collection of the target resource and how they are protected. 2. How the management activities supporting wild harvest of target species do not adversely affect ecosystem diversity, processes and functions. For example, evidence from monitoring that such practices do not negatively affect sensitive species or the ecosystem structure, diversity and functions in the collection area. <p>Management practices to minimise competition with or promote growth of the target species are used, including how these practices do not adversely affect sensitive species, ecosystem structure, diversity and function in the collection area. For example, evidence from monitoring.</p> <p>Compliance to Principle 2 of the FairWild Standard demonstrates that you are meeting the requirements of this standard. In most cases it will not be possible to meet this principle if the harvested species is classified by the IUCN (www.iucn.org) red list as 'critically endangered'.</p> <p> A sourcing requirement applies for SA processors.</p> |

SA NI 2.11 Additional standards for woodland

What is this chapter about?

The EU Organic Regulation does not contain detailed rules for the management of organic woodlands. In their absence, the following standards have been adapted from *EU Organic Regulation 834/2007* and *(EC) 889/2008* by applying *mutatis mutandis* and supplemented with expert opinion on best practice (as per FSC and UKWAS guidelines) to provide a certification framework for organic woodland production.

You must also comply with the applicable standards in:

- Chapter 1 'General standards for farming and growing'
- **Chapter 2** 'Standards for organic land and crops'

| Standards | Guidance |
|--|--|
| <p>SA NI 2.11.1 Scope</p> <ol style="list-style-type: none"> 1. These organic woodland standards cover what you must do for your farm woodland and trees, forestry, agroforestry and non-timber forest products to be certified as organic. 2. The standards apply to the production and harvesting of all wood and non-wood products from any woodland type, including: <ul style="list-style-type: none"> • boreal, temperate and tropical forests • plantations • natural and semi-natural forests • non-intervention forest • other systems in which a forest structure is expected to develop • farm woodland and farmland trees, and • agroforestry. <p><i>Soil Association higher standard</i></p> | <p>Examples of products for which you can apply for certification using these and other sections of our standards that we specify, include:</p> <ul style="list-style-type: none"> • sawn wood • charcoal • firewood • coppice products, and • woodland fungi and fruits. |
| <p>SA NI 2.11.2 FSC certification</p> <p>For your timber and wood products to be eligible for organic status, you must comply with:</p> <ul style="list-style-type: none"> • these organic woodland standards, and • your FSC endorsed national standard (UKWAS in the UK). <p><i>Soil Association higher standard</i></p> | <p>We regard FSC principles and criteria as the global benchmark of responsible forest management.</p> <p>The principle requirements of FSC/UKWAS are:</p> <ol style="list-style-type: none"> i. to have a detailed five year management plan and an outline 20 year management plan ii. to have maps of the woodland or forest area including, for example, biodiversity features, public access and felling areas, and |

| | |
|--|--|
| | <p>iii. to consult with relevant interested parties about your forest or woodland management.</p> <p>Please ask us if you would like a copy of the FSC or UKWAS standards.</p> |
| <p>SA NI 2.11.3 Organic woodland certification</p> <ol style="list-style-type: none"> 1. When you apply for organic woodland certification, you must manage all the forest, trees and woodland on your farm to these standards. 2. For your timber to be eligible for organic status, it must come from a functional forest or woodland unit. 3. The forest or woodland unit can consist of several separated areas, but you must: <ul style="list-style-type: none"> - manage them all under one management plan - convert all of them to organic woodland management at the same time. <p><i>Soil Association higher standard</i></p> | <p>Under some circumstances you may add additional separate woodland areas to your farm woodland certification. Speak to the certification team for more details.</p> |
| <p>SA NI 2.11.4 Controlling weeds, pests and disease</p> <p>To control weeds, pests and disease, you may use the methods and substances outlined in section 2.6 Controlling pests and disease.</p> <p><i>Soil Association higher standard</i></p> | |
| <p>SA NI 2.11.5 The use of fertilisers is restricted</p> <ol style="list-style-type: none"> 1. You must design new plantings to avoid the need to use fertilisers. 2. You must not: <ul style="list-style-type: none"> • use fertilisers to enhance the growth of healthy trees • use any fertilisers we do not allow in section 2.5, or • chemically treat mineral fertilisers to make them more soluble. <p><i>Soil Association higher standard</i></p> | <p>We will ask you for evidence that you have designed new plantings to avoid using fertilisers.</p> |
| <p>SA NI 2.11.6 Permitted fertilisers and soil conditioners</p> <p>If you bring in materials to increase soil fertility, you may only use:</p> <ul style="list-style-type: none"> • livestock manure, compost and plant waste as outlined in sections 2.4 and 2.5, and | |

| | |
|---|---|
| <ul style="list-style-type: none"> mineral fertilisers and supplementary nutrients as detailed in section 2.5. You may only use these as a supplement to using compost, manure and plant waste. <p><i>Soil Association higher standard</i></p> | |
| <p>SA NI 2.11.7 Mycorrhizal preparations You may use appropriate mycorrhizal preparations to enhance fertility in the woodland.</p> <p><i>Soil Association higher standard</i></p> | |
| <p>SA NI 2.11.8 Managing fire If you intend to use fire as a management tool, you must:</p> <ul style="list-style-type: none"> tell us you are going to use it and in what way take into account traditional knowledge on how and when to use fire, and assess the environmental impact of using fire, for example, the effect of smoke on lichen from charcoal burning. <p><i>Soil Association higher standard</i></p> | <p>You will need to include in your management plan details of how you will use fire and your assessment of its environmental impact.</p> |
| <p>SA NI 2.11.9 Traditional coppice</p> <ol style="list-style-type: none"> You may manage coppice areas on a minimum intervention basis. This may include, for example: <ul style="list-style-type: none"> singled to high forest techniques, or traditional coppice rotations If you are managing your coppice area on a traditional coppice rotation, you must: <ul style="list-style-type: none"> maintain the long term productive potential of coppice areas through on going planting and natural regeneration and appropriate techniques such as layering protect coppice stools from grazing by wild animals or livestock, and time your coppicing to minimise the impact of your operations on the surrounding environment. In addition to the FSC/UKWAS requirements, you must detail in your five year management plan: | |

| | |
|--|--|
| <ul style="list-style-type: none"> • how you will preserve or enhance the long-term productive potential of the coppice areas • the proposed coppice cycle, and • if relevant, the species, density and management of standards within the coppice areas. <p><i>Soil Association higher standard</i></p> | |
| <p>SA NI 2.11.10 Short rotation coppice You may have short rotation coppice systems, provided you can comply with these woodland standards.</p> <p><i>Soil Association higher standard</i></p> | |
| <p>SA NI 2.11.11 Non-timber forest products</p> <ol style="list-style-type: none"> 1. If you produce and sell timber and non-timber forest products you must comply with these standards and those in section 2.10 Wild harvesting or 3.17 Beekeeping. 2. You do not need to comply with these standards if you: <ul style="list-style-type: none"> • only harvest and sell non-timber forest products (including bee products), and not timber products, or • do not have management responsibility for the woodland or trees. <p><i>Soil Association higher standard</i></p> | |
| <p>SA NI 2.11.12 Agricultural production in woodland</p> <ol style="list-style-type: none"> 1. If you use woodland or forest areas for organic agriculture (for example for pigs or poultry) as well as woodland products, you must manage these areas to these organic woodland standards. 2. Where you allow livestock access to woodland or forest areas, but you are not selling any woodland products as organic, you do not need to meet these organic woodland standards. <p><i>Soil Association higher standard</i></p> | <p>In order to meet standard 2.3.1 you will need to describe the measures you will implement to ensure these areas and habitats are protected and/or enhanced.</p> |

| | |
|--|---|
| SA NI 3.0 Standards for organic livestock production | |
| SA NI 3.1 Converting your animals to organic | |
| What is this chapter about? This section covers the conversion periods for different livestock species and livestock products. It also includes standards for reduced conversion periods for land used for pig and poultry production and additional rules for the conversion of land used to feed organic livestock. | |
| Standards | Guidance |
| SA NI 3.1.1 Producing organic livestock 1. Organic animals must be born or hatched and raised on an organic holding and managed to full organic standards throughout their lives. <div>(EC) 2018/848 Art.6(n) (EC) 2018/848 Annex II Part II(1.3.1)</div> | Non-organic animals brought on to your holding under the conditions of standard 3.2.2 can only be classed as converted breeding stock. See standard 3.1.2 below referring to sale of organic products from these animals. Converted breeding stock cannot be sold as organic, but you may sell them as converted breeding stock. We will collect information on the status of your stock (organic, converted breeding stock and non-organic) during your inspection. You may mate animals on in-conversion land. |
| 2. Additionally: a) For sheep, goats and pigs intended for meat production, their dams must be managed to full organic standards from mating. b) For cattle intended for organic meat production, their dams must be managed to full organic standards for at least 12 weeks before calving. <div>Soil Association higher standard</div> | |
| 3. Non-organic poultry intended for meat production can convert to organic subject to meeting the requirements of standard 3.1.2. <div>(EC) 2018/848 Annex II Part II(1.2.2)(c)(d)</div> | |
| Why? Our aim is for animals to be organic for their whole life. We do not allow animals that start their lives on non-organic farms to be sold as organic, even when they are kept to organic standards for set amounts of time. The exception is poultry as there are not currently enough organically bred chicks available to supply the organic sector. | |

| Standards | Guidance |
|---|---|
| <p>SA NI 3.1.2 Producing organic livestock products Where non-organic animals have been brought onto the holding in accordance with the standards in section 3.2 and if their livestock products are to be sold as organic, the animals must be kept to full organic standards for at least the periods set out below:</p> <ul style="list-style-type: none"> a) 6 months for milk producing animals b) 6 weeks in the case of poultry for egg production c) 10 weeks for poultry of slow-growing strains for meat production, brought in before they are 3 days old d) for fast growing strains of poultry for meat production, refer to standard 3.12.2 e) 2 for minimum slaughter ages. f) three months for rabbits. <p style="text-align: right;"><i>(EC) 2018/848 Annex II Part II(1.3.4.4.4)</i> <i>(EC) 2018/848 Annex II Part II(1.2.2)(e)(g)(h)</i></p> | <p>To meet standard 3.2.6 you must have authorisation from your competent authority before bringing in non-organic birds. Refer to the standard below on minimum ages when poultry can be slaughtered.</p> <p>In NI, the competent authority classifies “slow growing strains” of poultry under organic management as strains wherein the live weight gain per day does not exceed 45g (or in the case of turkeys, 55g per day), averaged over the life of the bird. This may soon be supplemented by a list of particular strains classified as slow growing.</p> <p>If this daily live weight gain is exceeded, the poultry would be classified as a fast growing strain.</p> |
| <p>SA NI 3.1.3 Producing organic fleece You may only sell the fleece of your sheep and goats as Soil Association organic if:</p> <ul style="list-style-type: none"> a) your sheep and goats have been kept to full organic standards since birth or for at least 12 months before shearing b) you allowed a period of three months (or two times the legal withdrawal period, whichever is greatest) between the last treatment of the animals with an external veterinary treatment and shearing <p style="text-align: right;"><i>Soil Association higher standard</i></p> | <p>Wool is not currently covered under the EU organic regulation and therefore will not appear on your certification documents as certified to the EU organic regulation (889/2008).</p> <p>The British Wool Marketing Board will accept organic wool from sellers that have organic sheep listed on their licence. They will not require you to show organic wool as a separate enterprise.</p> <p>If you would like to certify and sell your wool to Soil Association standards we can issue you with a separate licence that does not reference the EU regulation.</p> <p>Organic wool certifiers may require further conditions, such as pesticide residue limits. For more information see the Global Organic Textile Standard (GOTS).</p> |
| <p style="text-align: center;">Why?</p> <p>This standard ensures that the entire fleece has been grown whilst the sheep are under organic management and reduces the risk that residues are left in the wool from any veterinary treatments.</p> | |

| Standards | Guidance |
|--|--|
| <p>SA NI 3.1.4 Simultaneous conversion</p> <ol style="list-style-type: none"> 1. Where non-organic animals exist on your holding when you begin to convert your land, you may convert all your livestock, pasturage and/or any land used for animal feed at the same time. The total combined conversion period, for livestock, pasturage and/or any land used for animal feed, before you can sell the animals or their products as organic, is 24 months. The animals must be mainly fed with products from this land. 2. During simultaneous conversion, animals present since the beginning of the conversion period may be fed with in-conversion feed produced on the in-conversion holding during the first year of conversion in exceedance of the 20% permitted for organic livestock. All other requirements for feeding in-conversion or organic feed must be met. 3. Non-organic animals may be introduced into an in-conversion production unit after the start of the conversion provided they meet the requirements of Chapter 3.2 in these standards. <i>(EC) 2018/848 Annex II Part II(1.2.1)</i> | <p>We interpret 'mainly' as meaning 51% or more.</p> <p>Animals that meet the requirements of simultaneous conversion may be brought on to or sold off your unit, but such livestock and any products from them may not be sold as organic until both buying and selling units have completed their conversion periods. Ask us to detail the stock on your trading schedule as 'stock reared under simultaneous conversion' before you trade or sell them (normally after your second inspection).</p> <p>If you have any other non-organic stock on the converting unit you must agree with us, through your conversion plan, when you will remove them.</p> |
| <ol style="list-style-type: none"> 4. For Soil Association organic, simultaneous conversion only applies to: <ol style="list-style-type: none"> a) calves, intended for meat production, born at least 12 weeks after the start of conversion b) other offspring conceived after the start of the conversion c) products of existing breeding stock, for example milk. <i>Soil Association higher standard</i> | |
| <p style="text-align: center;">Why?</p> <p>Our aim is for animals to be organic for their whole life. We do not allow animals that start their lives on non-organic farms to be sold as organic, even when they are kept to organic standards for set amounts of time. The exception is poultry as there are not currently enough organically bred chicks available to supply the organic sector.</p> | |

| | |
|---|--|
| <p>SA NI 3.1.5 Selling in-conversion animals or animal products During the conversion periods you must not sell any of your livestock or livestock products as organic or 'in-conversion'. <i>(EC) 2018/848 Art.10(4)</i></p> | |
| <p>SA NI 3.1.6 Conversion of land used to feed livestock You must make sure that by the time your livestock operation reaches organic status, any land on your unit used for their grazing or feed is either organic or in-conversion. <i>(EC) 2018/848 Annex II Part I(1.7.5)(a)</i></p> | |
| <p>SA NI 3.1.7 Conversion period for land used for pig and poultry production 1. Notwithstanding the provisions in standard 3.1.6. you can use land in its second year of conversion for organic pig or poultry production. 2. In the case of treatment with substances not permitted in these standards the provision for organic pigs and poultry on second year conversion land will not apply. <i>(EC) 2018/848 Annex II Part I (1.7.4.2)(1.7.5)(b)</i></p> | |

SA NI 3.2 Sourcing livestock

What is this chapter about?

This chapter covers the standards on sourcing and bringing in livestock onto your holding. Organic farming aims to complete the production cycles of livestock species with organically reared animals. The objective is to increase the availability and the gene pool of organic animals and improve the self-reliance of the organic farming sector. The choice of breeds used should take account of their capacity to adapt to local conditions, their vitality and their resistance to disease.

Standards

SA NI 3.2.1 Breed and livestock selection

1. When choosing the breed and strain of your livestock you must give preference to indigenous breeds and strains.
 2. You must choose breeds or strains that:
 - a) are suitable to local conditions
 - b) avoid the need for the mutilation of animals
 - c) have vitality and resistance to disease, including specific health problems or diseases associated with some breeds or strains used in intensive production, such as:
 - i) porcine stress syndrome
 - ii) PSE Syndrome (pale-soft-exudative)
 - iii) sudden death
 - iv) spontaneous abortion, and
 - v) difficult births requiring caesarean operations
- (EC) 2018/848 Art. 6(k)*
(EC) 2018/848 Annex II Part II(1.3.3)(1.3.2)(d)(1.3.4.4.5)

Guidance

Welfare issues, mortality and disease levels for all animal species can indicate that the breeds and strains chosen for your system are not suitable. The inspector will use your mortality and disease records and welfare outcome to inform a decision on compliance to this standard.

Some breeds and strains of chicken are not suitable for organic systems because research has shown them to be predisposed to welfare problems. The breed you use must either:

- **meet Defra's definition of slow-growing** (no more than 45g per day), or
- be on the [RSPCA's list of welfare-approved free-range broiler breeds](#).

SA NI 3.2.2 Bringing in livestock

1. If you need to bring in livestock you must source, in order of preference:
 - a) from other organic herds or flocks
 - b) converted breeding stock
 - c) non-organic breeding stock from rare breeds
2. When organic animals are not available subject to the conditions of the standards in this section, you may bring non-organic animals onto your holding for breeding purposes:
 - a) if they are non-organic breeding stock from rare breeds or

Available livestock will be listed on the National database.

If you are planning on bringing in non-organic animals you will need to demonstrate to us that organic animals are not available before purchase. You will need to contact the certification team with details.

If you bring in non-organic animals see section 3.1 on conversion requirements.

If you need more information please contact the certification team.

|--|--|
| <p>b) when organic animals are not available in the database in sufficient quality or quantity to meet your needs, subject to the conditions of the other standards in this section, provided they have not previously given birth.</p> <p><i>(EC) 2018/848 Annex II Part II(1.3.1)(1.3.4.1)</i> <i>(EC) 2018/848 Annex II Part II(1.2.1)</i> <i>(EC) 2018/848 Annex II Part II(1.3.4.4)</i></p> | |
| <p>NI SA 3.2.3 Registering organic livestock for market</p> <p>1. If you wish to sell organic livestock, you can register them on the organic livestock database. For registration, the supplier must:</p> <ul style="list-style-type: none"> a) demonstrate that your organic certification is valid and covers the livestock you wish to market; b) provide the following information:; <ul style="list-style-type: none"> i) number of animals ii) the common and scientific name for the species you wish to market. iii) the breed or strain iv) sex and production purpose of the animals; v) the ages of the animals and, if relevant, their stage of development; vi) the health status of the animals as defined in horizontal legislation. c) provide your address, contact details and date the livestock will be available. d) make sure that all requirements on the transport and sale of live animals are followed, including all relevant statutory rules. e) make sure this information must be kept up to date. You must immediately inform the manager of the database if any of the registered animals are no longer available. <p><i>(EC) 2018/848 Art. 26(1)(2)(b)(4)</i> <i>(EC) 2020/464 Art. 25(1)</i> <i>(EC) 2020/464 Annex III(3)</i></p> | <p>The database is currently in development by NICA and information on how to access and contribute will be provided as soon as this service is available.</p> |

| | |
|--|--|
| <p>SA NI 3.2.4 Establishing a herd or flock</p> <p>When you are establishing a herd or flock for the first time you may:</p> <ul style="list-style-type: none"> a) on a converting holding, convert existing animals on the holding; b) on organic land you may bring in non-organic animals, only if organic are not available in sufficient numbers. They must be reared organically from weaning and must comply with the following conditions: <ul style="list-style-type: none"> (i) calves and foals must be less than six months old (ii) lambs and kids must be less than 60 days old (iii) piglets must weigh less than 35kg (iv) kittens (rabbits) must be less than three months old. <p><i>(EC) 2018/848 Annex II Part II (1.3.4.4.1)</i></p> | <p>Where you are establishing a new livestock enterprise on an in-conversion holding you may bring in non-organic animals, these must be converted once the land becomes organic.</p> <p>Please refer to standards 3.1.1 and 3.1.2 for the livestock conversion requirements</p> <p>Please note that the requirements for cattle also apply to deer, unless specifically stated in chapter 3.16 additional Standards for organic deer.</p> <p>The EU Regulation 2018/848 includes standards for rabbits, the Soil Association are yet to review these standards, therefore licensees can only certify to the EU only scheme.</p> |
| <p>SA NI 3.2.5 Replacement breeding stock</p> <ol style="list-style-type: none"> 1. To renew a herd or flock you may bring in non-organic male and female breeding stock only if organic is not available in sufficient numbers. 2. The number of non-organic female breeding stock you bring on must comply with the following conditions: <ul style="list-style-type: none"> a) only up to 10% of your existing number of adults in your herd, per year for equines or cows, including buffalo and bison species b) only up to 20% of your existing number of adults in your herd or flock, per year for pigs, sheep, goats, deer or rabbits c) only one animal if you have less than five sheep, pigs or goats or less than ten cattle, equine, deer or rabbits d) females must not have previously given birth, in other words, they are before their first calving, lambing or farrowing. 3. Breeding stock brought onto your holding must be kept according to these organic standards. <p><i>(EC) 2018/848 Annex II Part II (1.3.4.4.2)</i></p> | <p>The percentage must be calculated from the number of adult animals present on the holding prior to bringing in your replacements. The allowance is calculated as the number of replacements brought in within a 12 month period.</p> |

SA NI 3.2.6 Additional allowances for bringing in non-organic stock

1. With prior authorisation from your competent authority you may increase the percentage of non-organic breeding stock you bring in up to 40% of your existing adults in the following special cases:
 - a) if you are significantly increasing the size of your herd or flock
 - b) if you are changing breed
 - c) if you are developing a new livestock enterprise, or
 - d) it is a rare breed.
2. These animals must not have previously given birth, unless they are a rare breed.

(EC) 2018/848 Annex II Part II (1.3.4.4.3)

(EC) 2018/848 Annex II Part II (1.3.4.1)

In the NI, permission is granted by the competent authority and we will submit an application on your behalf. Permission will only be granted if you show us that appropriate organic or converted stock is not available.

We will need the following details from you to submit to the competent authority:

- why you cannot source organic animals
- which organic suppliers you have contacted
- the number of animals you need
- the number of non-organic animals you plan to bring in and when
- the name of your suppliers
- whether any suppliers will be able to supply you with organic animals in future.

The request must be submitted at least two weeks **before ordering** any non-organic birds to ensure enough time for review and approval to be given. A form with all the relevant questions is available on our [website](#) or from the Certification Team.

A wide range of organic and converted breeding stock is normally available. There are several sources where you can look for organic stock:

- [The Organic Marketplace](#)
- **Similar platforms on other Certification Bodies' websites**
- Organic marketing groups
- Organic sales at livestock markets and private sales
- Online auctions.

Organic Poultry suppliers in the NI are listed [here](#).

Animals eligible to be considered as a rare breed must meet the conditions in *Annex IV to Commission Regulation (EC) No 1974/2006* ([13](#))

Organic Poultry suppliers in the NI are listed [here](#).

SA NI 3.2.7 Exceptional rules for poultry

1. When you are establishing for the first time, renewing or reconstituting a flock, non-organic poultry may be brought in **only** when organic poultry are not available in sufficient

If you are bringing in non-organic poultry you must have permission from your competent authority before you bring them onto the holding. In the NI,

| | |
|---|---|
| <p>numbers. If you have to bring in non-organic poultry you must in order of preference:</p> <ol style="list-style-type: none"> brought in pullets for egg production, or chicks for meat production must be less than three days old. use non-organic pullets for egg production before they are 18 weeks old. Any non-organic pullets you bring in must have been reared to the veterinary and feed standards detailed in sections 3.4 and 3.10. <ol style="list-style-type: none"> You must have prior authorisation from your competent authority before bringing in any non-organic poultry. The EU Commission has stated that producers may request permission to use non-organic pullets until 31st December 2026. <p style="text-align: right;"><i>(EC) 2018/848 Annex II Part II(1.3.4.3)</i></p> | <p>permission is granted by the competent authority and we will submit an application on your behalf. You must show us that organic poultry is not available in sufficient numbers.</p> <p>We will need the following details from you to submit to the competent authority:</p> <ul style="list-style-type: none"> • why you cannot source organic birds • which organic suppliers you have contacted • the number of birds you need • the number of non-organic birds you plan to bring in and when • the name of your suppliers • whether any suppliers will be able to supply you with organic birds in future. <p>A form with all the relevant questions is available on our website or from the certification team.</p> |
| <p>SA NI 3.2.8 Additional rules for the sourcing of non-organic poultry</p> <ol style="list-style-type: none"> If you bring in non-organic poultry, you must not bring in: <ol style="list-style-type: none"> poultry from cage systems, or poultry whose beaks have been clipped or tipped. <p style="text-align: right;"><i>Soil Association higher standard</i></p> | <p> A sourcing requirement applies for SA processors.</p> |
| <p style="text-align: center;">Why?</p> <p>Using cage reared birds not only conflicts with organic principles but also presents a welfare risk to birds by predisposing them to a range of behavioural problems which can be carried over to their new free-range environment.</p> <p>Beak tipping or clipping birds, which is standard practice in non-organic systems, is a mutilation which is unnecessary when the birds are kept under conditions which satisfy their behavioural needs.</p> | |
| <p>Standards</p> | <p>Guidance</p> |
| <p>SA NI 3.2.9 Exceptional rules due to catastrophic circumstances</p> <ol style="list-style-type: none"> In the case of high mortality caused by a catastrophic event you may renew or reconstitute your herd or flock with non-organic animals, when organically reared animals are not | <p>Please refer to standard 1.6.4 for more detailed rules on catastrophic events.</p> <p>The certification team can submit a request to the competent authority on your behalf. This permission needs to be in place before any action takes place.</p> |

| | |

SA NI 3.3 Keeping organic and non-organic livestock

What is this chapter about?

This section details when conventional and organic livestock production on the same holding is permitted and how separation must be maintained.

| Standards | Guidance |
|---|--|
| <p>SA NI 3.3.1 Keeping non-organic livestock</p> <p>1. On your organic holding you may only keep non-organic livestock provided that they are:</p> <ol style="list-style-type: none"> a different species to your organic stock, kept on clearly separate parcels of land, and kept in clearly separate buildings. <p>2. You must have adequate records to show separation.</p> <p style="text-align: right;"><i>(EC) 2018/848 Chapter III Art.9 (2)(7)(10)</i></p> | <p>Non-organic livestock enterprises can only graze the organic land provided they meet the criteria in standard 3.3.3.</p> <p>Livestock kept as pets or for your own use only and not as a commercial enterprise may be kept on your organic holding and do not have to be kept to organic standards. If they have access to organic land they must be fed non-GM feed.</p> <p>If you sell any products from your non-organic livestock, this becomes a non-organic commercial enterprise and you must meet this standard.</p> <p> Records demonstrating separation</p> |
| <p>SA NI 3.3.2 Parallel production exceptions</p> <p>1. Parallel production of livestock of the same species is only allowed in the case of research and educational centres.</p> <p>2. If you are carrying out agricultural research or formal education, the following conditions must be met:</p> <ol style="list-style-type: none"> keep the products used for the organic and in-conversion production units separate from those used for the nonorganic production units. | <p>In NI, permission is granted by NICA, the competent authority and we will submit an application on your behalf. Contact the certification team for more information.</p> |

| | |
|--|--|
| <p>b) keep the products produced by the organic, in-conversion and non-organic production units separate from each other.</p> <p>c) keep adequate records to show the effective separation of the production units and of the products.</p> <p><i>(EC) 2018/848 Art. 9(9)(10)</i></p> | |
| <p>SA NI 3.3.3 Grazing non-organic stock on your land</p> <p>1. You may graze non-organic stock on your organic or converting land for a limited time if:</p> <p>a) They are raised in an environmentally friendly way on land recognised under an environmental scheme and</p> <p>b) you do not graze organic animals on those fields at the same time.</p> <p>2. You must have records of your use of this provision.</p> <p><i>(EC) 2018/848 Annex II Part II(1.4.2.1)</i></p> | <p>In NI, NICA, the competent authority, usually limits the amount of time to a maximum of 120 days per calendar year that non-organic animals are on your whole holding, not on individual fields.</p> <p>Refer to standard 3.6.3 on maximum stocking rates.</p> <p> Records of non-organic stock grazing your land</p> |

SA NI 3.4 Keeping animals healthy and treating disease

What's this chapter about?

Organic farming aims to maintain animal health through prevention of disease and minimising the use of veterinary medicines. This section contains standards on how disease is prevented and what to do if any animals become sick or injured.

| Standards | Guidance |
|--|--|
| <p>SA NI 3.4.1 Preventing disease and injury</p> <p>Disease management must be based on preventative measures. You must draw up a health plan to show how you will build health and reduce disease. This must be tailored to suit your own farm and should allow you to minimise your use of veterinary medicines.</p> <p>Preventative measures include:</p> <p>a) breed and strain selection including:</p> <p>i) having regard to a high degree of genetic diversity</p> <p>ii) the capacity of animals to adapt to local conditions</p> <p>iii) their breeding value</p> <p>iv) their longevity</p> <p>v) their vitality</p> | <p>You must be able to demonstrate that you take preventative measures to limit your animal health problems. If health problems occur you must review your management, take appropriate action and monitor its effectiveness.</p> <p>Examples of preventative husbandry practices include:</p> <ul style="list-style-type: none"> • biosecurity measures • grazing and range management • stockmanship and welfare assessments • breeding and culling management. <p>We strongly recommend that you consult with your vet on health planning and review where any improvements can be made annually.</p> |

| | |
|---|---|
| <p>vi) and their resistance to disease or health problems</p> <p>b) husbandry management practices</p> <p>c) high quality feed and exercise</p> <p>d) appropriate stocking density, and</p> <p>e) adequate and appropriate housing maintained in hygienic conditions.</p> <p style="text-align: right;"><i>(EC) 2018/848 Art.6(j)</i> <i>(EC) 2018/848 Annex II Part II(1.5.1.1)</i> <i>(EC) 2018/848 Art. 39(1)(c)(1)(d) ii)</i></p> | <p>Livestock management plan templates can be found on our website.</p> <p>Include details of the biosecurity measures you implement when bringing new or returning animals onto your farm and managing diseased stock. This could include isolation, blood testing, TB testing, buying from disease-free sources, direct sources, double fencing.</p> <p>Include also the biosecurity measures you implement on your farm to limit the risk of specific diseases to your animals, such as restricting badger access to water troughs and feed, good manure management, and preventing disease transmission from neighbouring herds via shared equipment, brought-in manure or direct contact.</p> <p>For more information on suitable measures refer to government advice and advisory services. For example, for bovine TB consult TB Hub or contact the TB Advisory Service for free farm visits and bespoke advice.</p> <p>To reduce the risk of introducing disease you should avoid sourcing livestock from livestock markets and collection centres.</p> <p>Pasture should be managed to minimise disease and parasite burdens. Frequent disease and parasite monitoring will help you to assess the effectiveness of your pasture management. The welfare of your animals will be assessed at inspection and this will be used to indicate the effectiveness of your preventative measures.</p> |
| <p>SA NI 3.4.2 Quarantine</p> <p>If you obtain livestock from non-organic units, special measures such as screening tests or quarantine periods may apply, depending on local circumstances.</p> <p style="text-align: right;"><i>(EC) 2018/848 Annex II Part II (1.5.1.5)</i></p> | <p>In your health plan, include details of the biosecurity measures you implement when bringing new or returning animals, including any organic animals, onto your farm and managing diseased stock.</p> <p>This could include isolation, blood testing, TB testing, buying from disease free sources, direct sources, double fencing. For more information on suitable measures refer to government advice and the TB Advisory Service.</p> |
| <p>SA NI 3.4.3 Treating disease and injury</p> <p>1. If an animal becomes sick or injured they must be treated immediately, if necessary in isolation and in suitable housing.</p> | <p>It is your responsibility to ensure that any treatments and veterinary products you use are licensed or have veterinary approval for the intended purpose.</p> <p>You must be able to demonstrate that you are treating animals affected by disease, injury or ill-health quickly and effectively. The use and application of</p> |

| | |
|---|---|
| <p>2. When treating you must use phytotherapeutic and homeopathic products and the trace elements, vitamins and minerals listed in standard 3.10.14 in preference to chemically-synthesised allopathic veterinary treatment or antibiotics, provided that their healing effect works for the animal species and the condition you are treating.</p> <p>3. Where these treatments are inappropriate or will not be effective to avoid suffering or distress of the animal, chemically-synthesised allopathic veterinary medicinal products or antibiotics may be used under the responsibility of your vet.</p> <p><i>(EC) 2018/848 Annex II Part II(1.5.1.2) 1.5.2.1)(1.5.2.3)(1.7.5)</i></p> | <p>treatments should be given under professional guidance or after appropriate training.</p> <p> Inspectors will check that animals have been identified and treated promptly for all disease and injuries, including the management of common diseases and injuries such as lameness, scour, pneumonia and mastitis.</p> <p>If the treatment is not effective and the animal will not recover you must euthanise the animal to prevent suffering.</p> <p>Veterinary medicines records. See standard 1.7.10 for more information on records required.</p> |
| <p>SA NI 3.4.4 Identifying treated animals Whenever veterinary medicines are used livestock treated must be clearly identifiable</p> <p><i>(EC) 2018/848 Annex II Part III (3.1.4.2) (g)</i></p> | <p>We interpret identifiable in the case of large animals; individually, or by batch, or by hive, in the case of poultry, small animals and bees.</p> |
| <p>SA NI 3.4.5 Veterinary medicines for preventative treatment are prohibited You must not use chemically synthesised allopathic veterinary medicines or antibiotics for preventative treatment in the absence of illness or surgical intervention.</p> <p><i>(EC) 2018/848 Annex II Part II (1.5.1.3)</i></p> | <p>This includes boluses.</p> |
| <p>SA NI 3.4.6 Use of vaccines is permitted You may use immunological veterinary medicines.</p> <p><i>(EC) 2018/848 Annex II Part II (1.5.1.2)</i></p> | |
| <p>SA NI 3.4.7 Growth promoters are prohibited You must not use substances to promote growth or production of your animals (such as antibiotics, coccidiostats and other artificial aids for growth promotion purposes).</p> <p><i>(EC) 2018/848 Annex II Part II (1.4.1) (f) (1.5.1.4)</i></p> | <p>Any veterinary products or nutritional supplements must only be used to treat known nutritional deficiencies or disease and not to promote growth or production.</p> |
| <p>SA NI 3.4.8 Hormone treatments are prohibited You must not use hormones or similar substances to control reproduction or for other purposes (e.g. induction or</p> | <p>You may give hormone treatments to individual animals if you need to induce parturition for welfare reasons, or for specific disorders where you have no alternative, for example cows which are not coming into heat. You may not use hormones to manipulate normal reproductive cycles/physiology.</p> |

| | |
|--|--|
| <p>synchronisation of oestrus), unless as a form of veterinary therapeutic treatment for an individual animal. <i>(EC) 2018/848 Annex II Part II (1.5.1.4)</i></p> | |
| <p>SA NI 3.4.9 Artificial insemination is permitted You may use artificial insemination. <i>(EC) 2018/848 Annex II Part II (1.3.2) (a)</i></p> | |
| <p>SA NI 3.4.10 Cloning or embryo transfer is prohibited You must not use cloning or embryo transfer. <i>(EC) 2018/848 Annex II Part II (1.3.2) (c)</i> <i>(EC) 2018/848 Art. 9 (5)</i></p> | |
| <p>SA NI 3.4.11 Rearing of artificially induced polyploid animals The use of animal cloning, and the rearing of artificially induced polyploid animals, shall be prohibited. <i>(EC) 2018/848 Art. 9 (5)</i></p> | |
| <p>SA NI 3.4.12 The use of critically important antibiotics is restricted You must not use critically important antibiotics except when no other treatment would be effective. <i>Soil Association higher standard</i></p> | <p>The following antibiotics are considered critically important antibiotics (CIAs):</p> <ul style="list-style-type: none"> • Fluoroquinolone antibiotics • Third and fourth generation cephalosporin antibiotics <p>We will review the list of CIAs regularly and it may change to ensure the most important antibiotics are protected.</p> <p> Where these antibiotics have been used you must have veterinary justification for their use available at inspection in one or more of the following forms:</p> <ul style="list-style-type: none"> • post mortem reports • results from sensitivity tests • vet site visit reports • veterinary instructions <p>The following drugs are commonly licensed fluoroquinolones and third and fourth generation cephalosporins in the UK: enrofloxacin, danofloxacin, marbofloxacin, difloxacin, ceftiofur, cefoparazone and cefquinome. This is not a</p> |

| | complete list and the range of drugs may change, you can check on VMD website or liaise with your vet. |
|---|--|
| <p style="text-align: center;"><i>Why?</i></p> <p>Antibiotics play a vital role in treating infections in both animals and people. Antibiotics are often used in agriculture to control infections that can instead be avoided by less intensive ways of farming. As there are only a limited number of antibiotic classes available, some classes are used to treat both people and animals. Some of these classes of antibiotics are critically important for human health as they are relied upon to treat very sick patients. To protect the effectiveness of these critically important antibiotics we restrict their use in organic farming.</p> | |
| Standards | Guidance |
| <p>SA NI 3.4.13 The use of colistin is prohibited You must not use colistin. <i>Soil Association higher standard</i></p> | <p>We recommend that you advise your vet of this standard restriction so s/he can advise you on the best alternative treatment options.</p> <p>You can check on VMD website for the complete list of licensed colistin antibiotics in the UK.</p> <p> Veterinary medicine records.</p> <p> A sourcing requirement applies for SA processors.</p> |
| <p style="text-align: center;"><i>Why?</i></p> <p>Colistin is a critically important antibiotic used as a life-saving treatment for serious human infections like <i>E. coli</i>. It is also used in farming for the prevention and treatment of non-invasive (enteric) <i>E. coli</i>. Although there have been major cuts in colistin use in the UK, it is still one of the five most commonly used antibiotics in veterinary medicine within the EU.</p> <p>Scientists believe that colistin resistance is likely to be transferring from farm animals to humans. This is highly concerning because no new antibiotics have been discovered to treat <i>E. coli</i> infections for about 35 years. Colistin can be the only antibiotic which works to treat serious infections in humans. To protect its effectiveness as a life-saving human treatment we prohibit its use on Soil Association organic farms.</p> | |
| Standards | Guidance |
| <p>SA NI 3.4.14 Organophosphorus and organochlorine products are prohibited</p> <p>1. You must not use organophosphorus or organochlorine (gamma HCH) compounds for treatment of animals in any form for any purpose unless you are required to by law.</p> | <p>Sheep dips containing the active substance Dimpylate are the only organophosphate or organochlorine substances currently licensed in the UK. If you do not know whether the product you wish to use contains this active substance you can check on the VMD website, or ask your vet or the certification team.</p> <p> Records of disease prevention and veterinary medicines used.</p> |

| <p>2. If you are required by law to use organophosphorus compounds or organochlorine (gamma HCH) then you must not:</p> <ul style="list-style-type: none"> a) use any treated animals for Soil Association organic meat production, or b) sell the milk of any treated dairy animals as Soil Association organic. You must re-convert them before they can produce organic milk. <p style="text-align: right;"><i>Soil Association higher standard</i></p> | <p>If you are required to use these products by law you need to keep documentary evidence and identify the treated animals, which can be checked at inspection.</p> |
|---|--|
| <p style="text-align: center;">Why?</p> <p>Organophosphates are used in sheep dips and are acutely toxic. They have been linked with a range of problems including decreased male fertility, foetal abnormalities, chronic fatigue syndrome and Parkinson's disease. Organophosphates are also highly toxic to the aquatic environment.</p> <p>Organochlorine insecticides are extremely persistent in the environment and have severe negative impacts on wildlife and the environment. They last a very long time in the human body and are associated with increased risk of cancer, developmental delays and disruption of endocrine function.</p> | |
| Standards | Guidance |
| <p>SA NI 3.4.15 Compulsory treatments are permitted Treatments which are required by law are allowed. <i>(EC) 2018/848 Annex II Part II (1.5.2.6)</i></p> | |
| <p>SA NI 3.4.16 Number of permitted treatments</p> <ol style="list-style-type: none"> 1. You must not sell your livestock or their produce as organic if, within 12 months, you treat them with more than: <ul style="list-style-type: none"> a) three courses of chemically-synthesised allopathic veterinary medicines or antibiotics, or b) one course of chemically-synthesised allopathic veterinary medicines or antibiotics if their lifecycle is less than a year. 2. You must keep records of these treatments. 3. If an individual animal is treated over these limits they must undergo reconversion if you wish to sell their | <p>A course of treatment means all the measures you need to take to restore the health of your animal following one occurrence of a specific illness.</p> <p> You records will need to identify any animals and their products which cannot be sold as organic or need to reconvert.</p> |

| | |
|---|---|
| <p>products as organic, refer to section 3.1 on conversion periods.</p> <p>4. Excluded from this are vaccines, parasite control treatments and compulsory eradication schemes. (EC) 2018/848 Annex II Part II (1.5.2.4)</p> | |
| <p>SA NI 3.4.17 Withdrawal periods</p> <p>If you treat your animals with any allopathic veterinary medicinal products you must wait twice the legal withdrawal period as referred to in Article 11 of <i>Directive 2001/82/EC</i>, and no less than 48 hours, before you can sell your livestock products as organic. (EC) 2018/848 Annex II Part II (1.5.2.5)</p> | <p>You must have an effective system in place to ensure that treated animals or their products are not sold for consumption as organic during the withdrawal period.</p> <p> Both statutory and organic withdrawal periods must be recorded.</p> <p>If veterinary medicinal products are prescribed under the Cascade, you must implement twice the withdrawal period as legally required under the Cascade.</p> <p> If there is no suitable veterinary medicine authorised in the UK to treat a condition in a particular species, vets are permitted to use unauthorised veterinary medicines in accordance with the Cascade</p> <p>Vaccines are not subject to this requirement. Only the specified legal withdrawal periods must be observed.</p> <p>If you fail an antibiotic test (that is, your animals are over the maximum residue limit) you must inform us. We will expect you to identify the cause of the contamination and what you will do to prevent this happening in the future.</p> <p>You must inform the certification team if you have any suspicion that your livestock products may not meet organic standards.</p> |
| <p>SA NI 3.4.18 Storing veterinary medicines</p> <p>You may store allopathic veterinary medicinal products and antibiotics on holdings provided that they have been prescribed by a veterinarian in connection with a treatment given under standard 3.4.3 They must be stored in a secure</p> | <p> Records of all veterinary medicines stored. See standard 1.7.10 for full requirements on veterinary medicine records.</p> |

location and must be entered in the livestock record as required in standard 1.7.10.
(EC) 2018/848 Annex III (7.3)

SA NI 3.5 Animal welfare management

What is this chapter about?

This section details how animal welfare is maintained on organic farms and how it will be measured at inspection.

| Standards | Guidance | | | | |
|--|--|---------|--------------------------|-------------|---|
| <p>SA NI 3.5.1 Maintaining good animal welfare</p> <ol style="list-style-type: none"> 1. You must ensure your husbandry practices and housing, including stocking densities, meet your animals' species-specific developmental, physiological and behavioural needs at all times. 2. The persons looking after your animals must possess the necessary knowledge and skills to satisfy this standard. 3. Any suffering, pain or distress must be kept to a minimum during the entire life of the animal, including at the time of slaughter. <p style="text-align: right;"><i>(EC) 2018/848 Art. 5(j)</i> <i>(EC) 2018/848 Annex II Part II(1.7.1)(1.7.2)(1.7.3)</i></p> | <p>Regularly assess your animals to ensure their health and welfare and watch for signs of distress, disease and injury. Routine monitoring of the welfare of your animals will allow you to recognise problems and identify areas for improvement. If you would like more information and support on monitoring the welfare of your animals see our Advisory Support pages or contact Producer Support or the certification team.</p> <p>If there is a welfare problem, prompt action must be taken, the effectiveness of which must be reviewed and altered if necessary. If a welfare problem is found at your inspection then you must describe what steps you will take to resolve the issue in your <i>Action Summary Form and Declaration</i> and it will be discussed at the following inspection.</p> <p>The welfare of your animals will be assessed at inspection. For the major farm animal species your Inspector may use the following welfare outcomes measures to inform the decision on your compliance with this standard. However these lists are not exhaustive, your inspector will have other indicators and observations they use when assessing the welfare of stock. For measures marked with an * you will need to have these figures ready at your inspection.</p> <p>For more information on each measure see the 'explanation of measures' pages on the AssureWel website.</p> <table> <tr> <th>Species</th><th>Welfare outcome measures</th></tr> <tr> <td>Laying hens</td><td> <ul style="list-style-type: none"> • Feather loss • Bird dirtiness • Antagonistic behaviours such as aggressive behaviour and injurious feather pecking • Flightiness • Birds that need further care </td></tr> </table> | Species | Welfare outcome measures | Laying hens | <ul style="list-style-type: none"> • Feather loss • Bird dirtiness • Antagonistic behaviours such as aggressive behaviour and injurious feather pecking • Flightiness • Birds that need further care |

|---|---|
| Standards | Guidance |
| <p>SA NI 3.5.2 Animal mutilations are restricted</p> <ol style="list-style-type: none"> 1. The following operations may be exceptionally allowed but only on a case by case basis and only when those practices improve the health, welfare or hygiene of the livestock or where workers' safety would otherwise be compromised. <ul style="list-style-type: none"> • Tail docking of sheep • Dehorning • Beak trimming undertaken in the first three days of life 2. Disbudding may be allowed only on a case by case basis when it improves the health, welfare or hygiene of the livestock or where workers' safety would otherwise be compromised. 3. Where the operator has duly notified the competent authority and provided justification, these practices may be authorised. 4. You may only castrate in order to maintain the quality of products and traditional production practices. 5. When performing these operations any suffering to the animals must be reduced by applying adequate anaesthesia and/or analgesia and by qualified personnel carrying out the operation only at the most appropriate age. <p style="text-align: right;"><i>(EC) 2018/848 Annex II Part II (1.7.7)</i> <i>(EC) 2018/848 Annex II Part II (1.7.8) (1.7.9) (1.7.10)</i></p> | <p> A sourcing requirement applies for SA processors.</p> <p>If you wish to tail dock, disbud or dehorn your animals you must provide</p> <p> reasons for why it is necessary and how and when it will be carried out and what pain relief will be given in your health plan. In NI we can authorise these practices on the competent authority's behalf if the relevant criteria are met.</p> <p> The Codes of Recommendations provide advice on the appropriate methods and ages to perform these practices, as well as the relevant legal requirements in NI.</p> <p> In NI under the <i>Veterinary Surgery Act 1966</i>, as amended, only a veterinary surgeon may castrate a calf which has reached the age of two months and a lamb which has reached the age of three months.</p> <p> As required in the Mutilations (permitted procedures) Regulations 2007, for sheep and cattle (only for castration), the use of a rubber ring, or other device, to restrict the flow of blood to the scrotum or tail, is only allowed if carried out during the first week of life.</p> |

| | |
|---|---|
| | <p>In the UK under <i>The Protection of Animals (Anaesthetics) Act 1954</i>, as amended, it is an offence to disbud calves or dehorn any cattle without the use of an anaesthetic other than when chemical cauterisation is used. Chemical cauterisation may only be used during the first week of life. The <i>Code of Recommendations for the Welfare of Cattle</i> strongly recommends that chemical cauterisation should not be used.</p> |
| <p>SA NI 3.5.3 Pig mutilations are prohibited You must not carry out, or allow anyone else to carry out, the following procedures on your pigs:</p> <ul style="list-style-type: none"> a) tail docking b) teeth cutting or grinding c) castration d) ringing. <p style="text-align: right;"><i>Soil Association higher standard</i></p> <p>SA NI 3.5.4 Poultry mutilations are prohibited You must not carry out, or allow anyone else to carry out, the following procedures on your poultry:</p> <ul style="list-style-type: none"> a) beak clipping or tipping b) pinioning or clipping primary flight feathers c) desnooding d) de-toeing e) dubbing f) de-spurring g) caponise h) any other mutilations. <p style="text-align: right;"><i>Soil Association higher standard</i></p> | <p>You are not permitted to carry out or bring in pigs or poultry which have undergone the pig and poultry mutilations detailed in 3.5.3 and 3.5.4 under Soil Association higher standards. Eggs from beak-tipped birds cannot be sold as Soil Association organic.</p> <p> A sourcing requirement applies for SA processors.</p> |
| <p style="text-align: center;">Why?</p> <p>Evidence shows that mutilations cause considerable pain and stress, and can reduce the ability of animals to perform natural behaviours. Pig and poultry mutilations often do not address the underlying cause of the problem which can be solved through changes in management practices which allow animals to express natural behaviours.</p> | |
| Standards | Guidance |
| SA NI 3.5.5 Dairy calves | <p> In your livestock management plan you must detail the breeding and management strategy that you have in place to prevent the routine euthanasia of bull calves.</p> |

| | |
|--|--|
| <p>You must have a system in place to minimise the production of male dairy calves that are unsuitable for rearing for meat production.</p> <p><i>Soil Association higher standard</i></p> | <p>To minimise the number of unwanted male dairy calves you need to show in your livestock management plan that you have considered:</p> <ul style="list-style-type: none"> • Using sexed semen (you must detail in your livestock management plan if there are reasons you cannot use sexed semen) • Identifying a market for your dairy bull calves, • changing your breeding strategy to use more robust breeds more suited to rearing for beef. <p>We recognise that in certain situations, such as when farms are under TB movement restrictions, it may be difficult to avoid culling male dairy calves when the facilities or means to rear them are not available due to the inability to move any animals off farm. You should have a strategy for calf rearing in the event of TB or other movement restrictions.</p> |
| <p>Why?</p> <p>The Soil Association wants to see an end to the slaughter of male dairy calves at a young age that are currently judged unsuitable for meat production. We encourage and support our producers to consider their breeding strategy to minimise the number of unsaleable calves being born.</p> | |

| SA NI 3.6 Outdoor access and grazing | |
|--|---|
| <p>What is this chapter about?</p> <p>Organic farming is an extensive system of farming and aims to keep animals outside and on pasture whenever weather and environmental conditions allow. See also the respective species specific sections for the additional standards that apply for those species.</p> | |
| Standards | Guidance |
| <p>SA NI 3.6.1 Pasture access</p> <p>1. You must allow all your herbivore and poultry species permanent access to pasture, unless the following circumstances temporarily prevent this:</p> <ol style="list-style-type: none"> a) the health or welfare of the animal b) the weather conditions and the state of the ground, or c) community or national requirements or restrictions relating to specific animal or human health problems. | <p>You need to take account of both weather conditions and the state of the ground when deciding whether livestock should be out at pasture. Give consideration to the impact on the health and welfare of livestock and the management of the soil and pasture.</p> <p>For more information on methods to minimise soil damage refer to the guidance to standard 2.4.1 'Managing your soil'.</p> |

| | |
|---|--|
| <div>2. Breeding bulls over one year old must have access to pasture or an open air run of at least 30 m².</div> <div>3. Livestock must not be reared in pens on very wet or marshy soil.</div> <div>(EC) 2018/848 Annex II Part II (1.4.1) (e) (1.6.10) (1.7.3) (1.9.1.1 (b) (c) (1.9.2.1) (b) (c) (1.9.4.4) (d) (EC) 2020/464 Art. 7 (1)</div> | <div><div></div><div>A sourcing requirement applies for SA processors.</div></div> |
| <div>4. For Soil Association organic production you must allow your pigs permanent access to pasture or vegetated range, unless the circumstances listed in 3.6.1.1 prevent this.</div> <div>Soil Association higher standard</div> | |
| <div>Why?</div> <div>We believe that all animals should be given the freedom to roam and graze pasture, whenever conditions allow. Providing animals with access to pasture gives them a more natural life and the opportunity to express natural behaviours such as rooting and wallowing for pigs, dustbathing and ground pecking for chickens, and grazing for cows and sheep. All organic animals have a truly free-range life.</div> | |
| <div>Standards</div> | <div>Guidance</div> |
| <div>SA NI 3.6.2 Landless livestock production is prohibited</div> <div>You must not operate landless livestock production, where you do not manage agricultural land and/or have a written cooperation agreement with another organic operator associated with your livestock enterprise.</div> <div>(EC) 2018/848 Art.6 (k)</div> <div>(EC) 2018/848 Annex II Part II (1.1)</div> | <div>All organic terrestrial livestock production is land-based. The organic land does not have to be owned by the livestock manager but there must be a written agreement between the livestock enterprise manager and land owner, including the use of the land for grazing and the use of the land for spreading manure.</div> |
| <div>SA NI 3.6.3 Managing pasture and ranges</div> <div>You must manage your stock and keep their stocking density low enough to prevent:</div> <div>a) poaching of the soil</div> <div>b) over-grazing of vegetation</div> <div>c) the application of more than 170kg of nitrogen/ha/year, and</div> <div>d) pollution.</div> <div>(EC) 2018/848 Annex II Part II (1.6.6) (1.7.4)</div> <div>(EC) 2018/848 Annex II Part I(1.9.4)</div> | <div>You must be able to demonstrate how you manage pasture and outdoor ranges to prevent poaching and over-grazing. This could include a rotation plan. Refer to standard 3.6.4 to calculate the maximum stocking rate.</div> <div>The amount of nitrogen in livestock manure that is applied to your farm includes manure applied directly by grazing animals and by spreading. This must be calculated over a calendar year (i.e. a year beginning 1 January). The 170kg of nitrogen/ha is the 'loading limit' and is averaged over the farmed area of the organic unit.</div> |

SA NI 3.6.4 Stocking densities

To comply with the 170kg of nitrogen/ha/year limit you must not exceed the following stocking densities.

(EC) 2018/848 Annex II Part II (1.6.7)

Defra have produced the following guidance for stocking densities for the UK.

The table below has been taken from Nitrate Vulnerable Zones (NVZs) guidelines.

| Livestock type | Category | Maximum stocking rate per hectare |
|----------------|--|-----------------------------------|
| Pigs | 7kg <13 kg | 170 |
| | 13kg <31kg | 40 |
| | 31kg < 66kg | 22 |
| | 66kg > intended for slaughter | 16 |
| | Breeding sow before first litter | 15 |
| | Sow with litter up to 7kg | 9 |
| | Breeding boar 66kg - 150kg | 14 |
| | Breeding boar >150kg | 10 |
| | | |
| Cattle | Calves up to 2 months | 21 |
| | Dairy cows 2 months to <12 months | 5 |
| | Dairy cows 12 months to first calf | 3 |
| | Dairy cows after first calf | 2 |
| | Beef cows or steers 2 months <12 months | 5 |
| | Beef cows or steers 12 months <24 months | 3 |
| | Beef cows or steers from 24 months for slaughter | 3 |
| | Females from 24 months for breeding, < 500kg | 3 |
| | Females from 24 months for breeding, > 500kg | 2 |
| | Bulls, non-breeding >2 months | 3 |
| | Bulls for breeding, 2 months <24 months | 3 |
| | Bulls for breeding >24 months | 4 |
| | | |
| | | |
| Livestock type | Category | Maximum stocking rate per hectare |
| Sheep | 6 months – 9 months | 85 |

| | | | |
|---|---------|---|------|
| | | From 9 months to first lambing, tupping or slaughter | 121 |
| | | After lambing or tupping <60kg. | 22 |
| | | After lambing or tupping >60kg. | 14 |
| | Goats | | 11 |
| | Deer | Breeding | 11 |
| | | Other | 14 |
| | Horses | | 8 |
| | Poultry | Layers <17 weeks | 800 |
| | | Layers >17 weeks* | 320* |
| | | Broilers | 510 |
| | | Breeding stock <25 weeks | 590 |
| | | Breeding stock >25 weeks | 240 |
| | | Male turkey | 140 |
| | | Female turkey | 190 |
| | | Ducks | 230 |
| * Figures assume 80% of excreta are deposited in buildings | | | |
| Standards | | Guidance | |
| <p>SA NI 3.6.5 Protecting your stock</p> <p>You must provide sufficient protection for your stock against predation and rain, wind, sun and extreme temperatures, depending on local conditions and breed.</p> <p><i>(EC) 2018/848 Annex II Part II (1.7.2) (1.6.2) (1.9.2.2.)(a)</i></p> <p><i>(EC) 2020/464 Art. 12 2)</i></p> | | <p>You must be able to demonstrate what measures you have in place and how you monitor that they are effective. For example monitoring mortality rates from predation, exposure, sunburn, heat exhaustion, use of range, condition of livestock etc.</p> <p>Shade provision should allow animals to reduce at least 30 - 50% of their total heat load and can be natural or artificial. Natural shade, such as trees, is often more effective due to the cooling effect of the water evaporation. Pigs will also need wallows over the summer months to protect against the heat and the sun. Shelter can be natural or artificial as long as it provides effective protection against prevailing conditions.</p> <p>I Examples of protection could include, as appropriate:</p> <ul style="list-style-type: none"> • Trees, hedges • Rocks, ridges • Scrub, tussocks | |

| | |
|--|--|
| | <ul style="list-style-type: none"> • Drystone walls • Brashings • Field shelters • Bales • Buildings • Long grass • Wallows <p>Extremes of temperature will limit the productivity of an animal as well as potentially compromising its welfare. Providing cattle, sheep, pigs and goats with shade and shelter at pasture gives them the opportunity to minimise the effects of heat stress and inclement weather conditions, which can lead to:</p> <ul style="list-style-type: none"> • better food conversion and growth rates • better survival rates of young animals • increased pasture growth and utilisation, with animals spread out to graze and ruminate. |
| <p>SA NI 3.6.6 Grazing your organic stock on common land</p> <ol style="list-style-type: none"> 1. You may graze your organic animals on common land only if: <ol style="list-style-type: none"> a) you can show that the land has not been treated with any products which are not permitted in these organic standards for at least three years b) any non-organic stock which graze the land come from a farming system equivalent to those described in Articles 23, 25, 28, 30, 31 and 34 of Regulation (EU) No 1305/2013 c) you can show that there is adequate segregation from non-organic animals that use the land if you wish to sell their products as organic. 2. You must keep records of the use of this provision. <i>(EC) 2018/848 Annex II Part II(1.4.2.2.1)</i> | <p>In NI common land is registered with the National Register of Common Land. If the common land is not officially registered you will have to add the land to your licence and put it through a 24 month conversion period.</p> <p>We regard common land differently from organic and list it as a separate category on your licence.</p> <p>Examples of adequate segregation can include, but are not limited to:</p> <ul style="list-style-type: none"> • clearly hefted animals • clear identification, i.e. ear tags • methods to avoid access to non-organic feed • separate handling and treatment. |

| | |
|---|---|
| <p>SA NI 3.6.7 Grazing non-organic land during transhumance</p> <ol style="list-style-type: none"> 1. During the period of transhumance animals may graze non-organic land when they are being moved on foot from one grazing area to another, provided they are kept separate from other animals. 2. The uptake of non-organic feed, in the form of grass and other vegetation which the animals graze during this period must not exceed: <ol style="list-style-type: none"> a) 35 days covering both the outward and return journeys and b) a maximum of 10 % of the total feed ration per year, calculated as a percentage of the dry matter of feedstuffs of agricultural origin. 3. You must keep records of the use of this provision. <i>(EC) 2018/848 Annex II Part II(1.4.2.2.2)</i> | <p> Records of transhumance</p> |
| <p>SA NI 3.6.8 Exceptional rules on access to organic grazing due to Catastrophic circumstances</p> <ol style="list-style-type: none"> 1. In exceptional circumstances due to a catastrophic event when your livestock production unit is affected, the competent authority may authorise adaption to the rules on organic grazing requirements detailed in these standards. 2. Upon approval by the competent authority, you must keep documentary evidence of the use of this exception <i>(EC) 2018/848 art. 22</i> <i>(EC) 2020/2146 art. 3(4)</i> | <p>Please refer to standard 1.6.4 for more detailed rules on catastrophic events.</p> <p>The certification team can submit a request to the competent authority on your behalf. This permission needs to be in place before any action takes place.</p> |

SA NI 3.7 Standards for pigs' outdoor access

| Standards | | Guidance |
|---|--|---|
| SA NI 3.7.1 Outside shelters If you use field shelters and pig arcs, they must be covered, bedded and provide the following minimum lying area: | | Where shelters are used instead of permanent housing and if climatic and soil conditions necessitate housing pigs, the shelters provided must meet the minimum housing requirements set out in Chapter 3.8. |
| Class of pig | Minimum lying area – covered and bedded for outside shelters (m²/head) | |
| Breeding pigs | | |
| Farrowing sows with piglets up to 28 days | 4.0 | |
| Dry sows and boars | 1.5 | |
| Fattening pigs | | |
| Up to 30kg (and over 40 days) | 0.30 | |
| Up to 50kg | 0.40 | |
| Up to 85kg | 0.65 | |
| Up to 110kg | 0.80 | |
| Soil Association higher standard | | |
| Why? We set space requirements to ensure that shelters given to pigs provide them with enough space to rest and lie down comfortably and offer protection from the elements. | | |

| Standards | Guidance |
|--|---|
| <p>SA NI 3.7.2 Rooting and dunging area provision The outdoor area for pigs must allow your pigs to dung and root. For the purposes of rooting different substrates can be used.</p> <p><i>(EC) 2018/848 Annex II Part II (1.9.3.2)(f)</i></p> | <p>Pigs must be able to root and dung even when they are housed. Any outdoor area must provide enough material for all pigs to use whenever they want. Suitable rooting substrates include straw or green fodder (hay, grass, silage, alfalfa, etc.), wood shavings etc. Suitable substrate must allow the pigs to root using their snout and it must be regularly renewed, as pigs will normally lose interest in rooting material that is soiled with faeces. Frequent replacement with novel materials (e.g. that include fresh loose grains/seeds) will encourage greater rooting.</p> <p> Manipulation and exploration of enrichment material with the mouth and snout is a good indicator that your substrate provision is suitable. Your inspector may use the 'enrichment use' measure to determine whether you meet this standard.</p> <p>For more information on providing enrichment see the Agriculture and Horticulture Development Board (AHDB) Pork website.</p> |
| <p>SA NI 3.7.3 Quality of outdoor area The outdoor area must be attractive to pigs. Where possible, preference shall be given to fields with trees or forests.</p> <p><i>(EC) 2020/464 Art. 12(1)</i></p> | |

SA NI 3.8 Housing livestock

What is this chapter about?

This section includes the standards on how organic animals are housed. See also the respective species specific sections for the additional standards that apply for those species. Organic farming aims to ensure that the specific behavioural needs of animals are met. Housing conditions should provide enough light, space, comfort and sufficient space to allow ample freedom of movement and room for animals to express their natural behaviours.

Standards

Guidance

SA NI 3.8.1 Keeping livestock outdoors

You do not have to provide housing for your livestock if the climate and soil type in your area is suitable for your animals to live outdoors. In such cases, animals shall have access to shelters or shady areas to protect them from adverse weather conditions.

(EC) 2018/848 Annex II Part II(1.6.2)

You must provide housing for your animals if you cannot provide adequate shelter and there are not suitable ground conditions outside all year.

You may use woodchip corrals or stand-off pads. Seek specialist, professional advice to ensure they meet the relevant statutory environmental requirements. As they are classed as housing, the stocking densities used must meet the requirements set out in standard 3.8.6.

SA NI 3.8.2 Providing suitable housing

1. Housing must provide the insulation, heating and ventilation necessary to ensure that air circulation, dust levels, temperature, humidity and gas concentrations are kept within limits which ensure the wellbeing of the animals.

2. Housing must permit plentiful natural ventilation and light to enter.

(EC) 2018/848 Annex II Part II(1.6.1)

Monitor your livestock to ensure that the housing conditions are suitable. Respiratory illnesses, for example coughing and eye and nasal discharge, may indicate a problem. At inspection we may measure environmental parameters such as ammonia and dust levels and use welfare outcome measures to assess the suitability of your housing e.g. the number of pneumonia treatments required.

SA NI 3.8.3 Animals must be able to move freely

1. All animals must be able to move freely. Animals must not be tethered or held in isolation.

2. Tethering or isolation of livestock shall be prohibited, except in relation to individual animals for a limited period and insofar as this is justified for veterinary reasons. In this case livestock must be kept in spaces with a solid floor, provided with appropriate bedding and be able to turn easily and lie down full length. The isolation of livestock may only be **authorised, and only for a limited period, where workers' safety is** compromised or for animal welfare reasons. Competent authorities may authorise the tethering of cattle in farms with a maximum of 50

If you house any breeding bulls in bull pens for specific reasons such as health and safety or animal welfare, and they are physically separate from other animals, you must keep them in sight of other animals in order to meet this standard.

| <p>animals (excluding young stock) where it is not possible to keep the cattle in groups appropriate to their behaviour requirements, provided they have access to pastures during the grazing period, and have access to open air areas at least twice a week when grazing is not possible</p> <p>3. Cages, boxes and flat decks to raise livestock shall not be used for any livestock species</p> <p>(EC) 2018/848 Annex II Part II(1.6.3)(1.7.5)</p> | |
|--|--|
| <p>4. You must not routinely tether your livestock over long periods. This includes cattle on smallholdings.</p> <p>Soil Association higher standard</p> | |
| <p>Why?</p> <p>The tethering of groups of cattle is still practiced on some traditional smallholdings in mountainous regions of Europe. We do not allow Soil Association producers to tether livestock because it prevents animals from freely performing their full range of natural behaviours and limits their behavioural opportunities or choices.</p> | |
| Standards | Guidance |
| <p>SA NI 3.8.4 Stocking density</p> <p>1. The stocking density in your animal housing must provide for:</p> <ul style="list-style-type: none">a) the comfort and well-being of your animalsb) species-specific and behavioural needs, which will depend on their breed, sex, age and the size of the group, andc) the animals' welfare by providing sufficient space to stand naturally, lie down easily, turn round, groom themselves, to assume all natural postures and make all natural movements such as stretching and wing flapping. <p>(EC) 2018/848 Annex II Part II(1.6.3)(1.7.2)</p> | <p>The minimum stocking densities are set out in standards 3.8.6, 3.8.7 and 3.8.8 Consider your specific animals' needs when setting the stocking rates. For example if you are keeping horned cattle together, you should provide extra lying and feeding space.</p> <p>The welfare of your animals will be assessed at inspection and your inspector may use the following welfare outcome measures to inform the decision on your compliance with this standard:</p> <p>Pigs</p> <p>Body marks and lesions on pigs can be caused by keeping them at the wrong stocking density. Wounds of the head and shoulder are associated with fights for social rank, particularly in a restrictive environment that limits effective dispersal and the display of appropriate submissive behaviour.</p> <p>Cattle</p> <p>The identification of swellings and lesions on cattle can indicate obstructions in walkways and a lack of space for free movement.</p> |

| | |
|---|--|
| | <p>If you use cubicles to house your cattle, you must be able to demonstrate that you have sufficient number and size of cubicles to meet each individual cow's needs. We would expect you to have at least 5% more functioning cubicles than the number of cows in the herd to ensure the cows can always find a cubicle to lie down in, away from conflict and bullying. The size of your cubicles must be suitable for the size, shape and weight of all your cattle. Follow this link for guidelines for cubicle dimensions.</p> |
| <p>SA NI 3.8.5 Floor space and resting area for mammals</p> <ol style="list-style-type: none"> 1. At least half the housing for mammal species must be a comfortable clean and dry resting/lying area, which is solid and not slippery, slatted or uneven, and must not be of grid construction. 2. The resting/lying area must have ample dry bedding. 3. The bedding must comprise of straw or other suitable natural material and may be enriched with mineral products listed in standard 2.5.2. <p><i>(EC) 2018/848 Annex II Part II(1.7.2)(1.9.1.2)(a)(1.9.1.2)(b)</i> <i>(EC) 2020/464 Chapter II I Art. 4</i> <i>(EC) 2020/464 Chapter II 3 Art. 11</i></p> | <p> A sourcing requirement applies for SA processors.</p> <p>Natural materials used on the bedding must not have been treated with prohibited materials or substances which would prevent them from being applied to organic land. Examples of suitable bedding material are:</p> <ul style="list-style-type: none"> • natural materials such as bean haulm, bracken or rushes • sawdust and wood shavings (from untreated wood only) • sand • non-organic straw. <p>If you use cubicles in your cattle housing, you must make sure they are comfortable and clean. If you are using rubber mats, mattresses, water beds or other cushioned materials, these on their own are not regarded as sufficient natural bedding material.</p> <p>The welfare of your animals will be assessed at inspection. Your Inspector will use the following welfare outcomes measures to indicate whether you are meeting this standard:</p> <ul style="list-style-type: none"> • cattle: cleanliness, hair loss, lesions and swellings • pigs: manure on the body and leg swellings • sheep: fleece loss and dirtiness. <p>Lameness can be caused by animals slipping over and could demonstrate that the floor surface you are providing is slippery or damaging to feet. Slurry build up can cause foot problems.</p> |

| Standards | | | Guidance |
|---|--|--|---|
| SA NI 3.8.6 Minimum housing area for cattle | | | |
| 1. When housing your animals you must give them at least the following space: | | | |
| Class of animal | Minimum indoor space m ² per head (net area available to animals) | Additional area required m ² per head * (Indoors or outdoors, excluding pasture) | Total m ² per head |
| Breeding and fattening cattle: | | | |
| Up to 100 kg | 1.5 | 1.1 | 2.6 |
| Up to 200 kg | 2.5 | 1.9 | 4.4 |
| Up to 350 kg | 4.0 | 3.0 | 7.0 |
| Over 350 kg | 5.0 with a minimum of 1m ² /100kg | 3.7 with a minimum of 0.75m ² /100kg | 8.7 with a minimum of 1.75m ² /100kg |
| Dairy cows | 6.0 | 4.5 | 10.5 |
| Bulls for breeding | 10 | 30* | 40 |
| | <p>When a bull is fully mature and used for breeding then the space allowance for 'Bulls for breeding' should be applied, if they are adolescent bulls, not yet at maturity the space requirements for 'breeding and fattening cattle' should be applied for all the animals in the group. If mature bulls are housed within a group made up of different ages or types e.g. Cows or adolescent bulls, then the space calculation should be made for the other cattle in the group with the additional space for the bull.</p> <p>* The additional area for bulls is not required if the bull is temporarily being run with cows provided the additional area is provided for all other animals within the group.</p> | | |
| 2. Open air areas may be partially covered. | | | |
| (EC) 2018/848 Annex II Part II(1.6.4)(1.6.5) | | | |
| (EC) 2020/464 Annex I Part I(1) | | | |
| 3. The additional area must always be provided. | | | |
| Soil Association higher standard | | | |
| <p style="text-align: center;">Why?</p> <p>Providing animals with enough space is an important factor which affects the welfare of farm animals. Cattle are typically kept indoors during the winter months to shelter them from the weather and to protect the pasture from damage. During these months it is important that cattle are given enough space to lie down, walk, feed and perform other behaviours, but also enough space for behavioural choice and freedom. We therefore require that our Soil Association producers always provide additional space at all times of the year.</p> | | | |

| Standards | | | Guidance |
|---|---|--|-------------------------------|
| SA NI 3.8.7 Minimum housing area for sheep and goats | | | |
| 1. When housing your animals you must give them at least the following space: | | | |
| Class of animal | Lying area or indoor area m ² per head | Outdoor exercise area required m ² per head Excluding pasture | Total m ² per head |
| Sheep/goat | 1.5 | 2.5 | 4 |
| Lamb/kid | 0.35 | 0.5 | 0.85 |
| 2. You do not need to provide the outdoor exercise area during the winter months provided that the winter-housing system allows freedom of movement and the livestock have access to pasture during the grazing period. | | | |
| 3. Open air areas may be partially covered. | | | |
| (EC) 2018/848 Annex II Part II (1.6.4) (1.6.5) (1.7.3) (1.9.1.1) (d) EC) 2020/464 Annex I Part I (2) | | | |
| SA NI 3.8.8 Minimum housing area for pigs | | | |
| 1. When housing your animals you must give them at least the following space: | | | |
| Class of animal | Lying area or indoor area m ² per head | Outdoor exercise area required m ² per head Excluding pasture | Total m ² per head |
| Farrowing sows with piglets up to 40 days | 7.5 | 2.5 | 10 |
| Piglets Over 40 days and up to 30 kg | 0.6* | 0.4* | 1.0 |
| | Soil Association higher standard | | |
| Fattening pigs | | | |
| More than 30kg but not more than 50 kg | 0.8* | 0.6* | |
| | Soil Association higher standard | | 1.4 |
| More than 50 kg but not more than 85 kg | 1.1 | 0.8 | 1.9 |
| More than 85kg but not more than 110 kg | 1.3 | 1.0 | 2.3 |
| More than 110kg | 1.5 | 1.2 | 2.7 |
| Breeding pigs | | | |
| Sows | 3.0 Soil Association higher standard | 1.9 | 4.9 |
| Boars | 6 | 8.0 | 14 |

| | If pens are used for natural service: 10m ² /boar | | If pens are used for natural service: 18 m ² /boar |
|--|--|--|---|
| <p>2. Open air areas may be partially covered.</p> <p>3. At least half the housing for mammal species must be a comfortable clean and dry resting/lying area, which is solid and not slippery, slatted or uneven, and must not be of grid construction.</p> <p>4. At least half of the minimum surface of both the indoor area and the outdoor area must be solid, and not slatted or of grid construction.</p> <p>5. If your housing was built, refurbished or brought into use for organic production before 1st January 2022 and will require major reconstruction to comply with the requirement to provide a solid floor on at least half of the outside area, your housing must comply from 1st January 2030 at the latest.</p> <p style="text-align: right;">(EC) 2018/848 Annex II Part II (1.6.4) (1.6.5) (1.7.3) (1.9.1.1) (d) (EC) 2020/464 Art.11 (EC) 2020/464 Art. 26 EC) 2020/464 Annex I Part III</p> | | | |
| <p style="text-align: center;">Why?</p> <p>We require breeding sows to have more space when they are housed indoors. This ensures that each sow has enough space to lie down and get up comfortably and has room to explore, root, feed and meet all their other behavioural needs.</p> <p><i>*These standards comply with European Commission organic regulation 2018/848, which has replaced regulations 834/2007 and 889/2008. The Soil Association has identified this standard as an area where the new regulation is less strict, therefore the requirement will be kept at the same level as the previous regulation and marked as a Soil Association higher standard. This standard will undergo a review process in 2023 to determine whether it should be brought into line with 2018/848, or should remain a higher standard.</i></p> | | | |

| Standards | Guidance | | | | | | | | | | | | | | | | |
|--|--|--------------------|-------------------|---|----|----|----|----|----|----|----|----|----|----|----|-----|----|
| <p>SA NI 3.8.9 Feed and water provision Your livestock must always have easy access to feed and water. <i>(EC) 2018/848 Annex II Part II(1.7.2)</i></p> | <p>Feed For animals fed <i>ad lib</i> you must feed them in a way that minimises bullying. For animals not given continuous access to feed, you must provide adequate feed space to ensure that all animals can feed at the same time and to avoid competition and aggression. The following is a guide to providing adequate feeding space for different livestock species:</p> <p>Sheep</p> <ul style="list-style-type: none"> When feeding concentrate, 45cm of trough space and when feeding hay and silage, approximately 12-15cm of trough space per ewe. The size of the animals and presence or absence of horns should be taken into account. <p>Pigs</p> <ul style="list-style-type: none"> Minimum trough space per pig when fed a rationed feed: <table border="1" data-bbox="1003 608 2172 938"> <thead> <tr> <th>Weight of pig (kg)</th><th>Trough space (cm)</th></tr> </thead> <tbody> <tr><td>5</td><td>10</td></tr> <tr><td>10</td><td>13</td></tr> <tr><td>15</td><td>15</td></tr> <tr><td>35</td><td>20</td></tr> <tr><td>60</td><td>23</td></tr> <tr><td>90</td><td>28</td></tr> <tr><td>120</td><td>30</td></tr> </tbody> </table> <p>Water To ensure that all animals, including animals pre-weaning, have access to water at all times, you should carefully consider the height of drinkers so that you ensure all livestock can access the drinking point.</p> <p>The following is a guide to providing adequate water supply to different livestock species:</p> <p>Cattle</p> <ul style="list-style-type: none"> There should be enough water available for at least 10% of housed cattle to drink at any one time. <p>Pigs</p> <ul style="list-style-type: none"> Where nipple drinkers are used, provide one drinker per ten pigs. | Weight of pig (kg) | Trough space (cm) | 5 | 10 | 10 | 13 | 15 | 15 | 35 | 20 | 60 | 23 | 90 | 28 | 120 | 30 |
| Weight of pig (kg) | Trough space (cm) | | | | | | | | | | | | | | | | |
| 5 | 10 | | | | | | | | | | | | | | | | |
| 10 | 13 | | | | | | | | | | | | | | | | |
| 15 | 15 | | | | | | | | | | | | | | | | |
| 35 | 20 | | | | | | | | | | | | | | | | |
| 60 | 23 | | | | | | | | | | | | | | | | |
| 90 | 28 | | | | | | | | | | | | | | | | |
| 120 | 30 | | | | | | | | | | | | | | | | |

| | | |
|--|--|--------------------|
| | Nipple drinkers should have the following minimal flow rates for various weights of pigs: | |
| | Weight of pig (kg) | Flow rate (ml/min) |
| | Newly weaned | 300 |
| | Up to 20kg | 500-100 |
| | 20kg-40kg | 1000-1500 |
| | Finishing pigs up to 100kg | 1000-1500 |
| | Sows and gilts – pre-service and in-pig | 2000 |
| | Sows and gilts – in lactation | 2000 |
| | Boars | 2000 |
| | <ul style="list-style-type: none">Where troughs are used, provide 30cm of trough length per 10 pigs. <p>Your Inspector will use the guidelines for feed and water space given above, to determine whether you are meeting this standard.</p> | |
| Standards | Guidance | |
| SA NI 3.8.10 Peat as a bedding material is prohibited You must not use peat as a bedding material. <i>Soil Association higher standard</i> | | |
| <p>Why?</p> <p>Peat is a precious resource that can take thousands of years to form. Peatlands are important habitats for a wide range of species and play a key role in preventing floods and storing carbon. For these reasons, and because bedding made from other materials is readily available, we prohibit the use of peat for this purpose. We also restrict the peat use in horticulture please see standard 2.5.4.</p> | | |

| Standards | Guidance |
|---|--|
| <p>SA NI 3.8.11 Managing your housing to prevent disease and injury</p> <p>Your housing, pens, equipment and utensils must:</p> <ol style="list-style-type: none"> be kept in a condition that is unlikely to cause your animals injury be properly cleaned and disinfected to prevent cross-infection and build-up of disease have faeces, urine and uneaten or spilt food removed as often as necessary to minimise smell and to avoid attracting insects or rodents. <p><i>(EC) 2018/848 Annex II Part II(1.5.1.1)(1.5.1.7)</i></p> | <p>Good hygiene in housing can reduce the prevalence of certain diseases such as scouring, pneumonia and watery mouth.</p> <p>The welfare of your animals will be assessed at inspection. Your inspector will use the following indicators to determine whether your housing may be causing injury to your animals:</p> <ul style="list-style-type: none"> • Cattle: lameness, cleanliness, presence of broken tails, hair loss, lesions and swellings and mastitis records • Sheep: lameness, cleanliness and fleece loss • Pigs: lameness, body marks, lesions and leg swellings • Broilers: dirtiness, walking ability, hock burn, pododermatitis • Laying hens: feather loss, dirtiness. <p>The condition of facilities (such as gates and feeders) will also be taken into account to determine if they are likely to cause injury.</p> |
| <p>SA NI 3.8.12 Exceptional rules on housing livestock due to catastrophic circumstances.</p> <ol style="list-style-type: none"> In exceptional circumstances due to a catastrophic event when your livestock production unit is affected the competent authority may authorise exceptions to the rules on the stocking density in buildings and minimum surfaces for indoor and outdoor areas as described in the livestock production standards on housing livestock. Upon approval by the competent authority, you must keep documentary evidence of the use of this exception. <p><i>(EC) 2018/848 art. 22</i> <i>(EC) 2020/2146 art. 3(4)</i></p> | <p>Please refer to standard 1.6.4 for more detailed rules on catastrophic events.</p> <p>The certification team can submit a request to the competent authority on your behalf. This permission needs to be in place before any action takes place.</p> |

| SA NI 3.9 Housing standards for pigs and cattle | |
|--|---|
| Standards | Guidance |
| <p>SA NI 3.9.1 Housing pigs indoors</p> <p>1. If you need to house your pigs indoors you must keep your sows in groups, except in the last stages of pregnancy and during the suckling period. <i>(EC) 2018/848 Annex II Part II (1.7.2)(1.9.3.2)(d)</i></p> | <p> A sourcing requirement applies for SA processors.</p> <p>You may still keep your sows in groups during the last stages of pregnancy and the suckling period.</p> |
| <p>2. You must allow sows to always move freely in their pens. Their movement must not be restricted.</p> <p><i>Soil Association higher standard</i></p> | |
| <p>Why?</p> <p>This higher standard has been introduced in Northern Ireland to maintain consistency with the current regulation in GB to ensure the highest levels of welfare are maintained for sows in the last stages of pregnancy and during the suckling period.</p> | |
| <p>SA NI 3.9.2 Farrowing crates are prohibited</p> <p>You must not use farrowing crates. <i>(EC) 2018/848 Annex II Part II(1.6.3)</i></p> | <p> A sourcing requirement applies for SA processors.</p> |
| <p>SA NI 3.9.3 Keeping piglets on flat decks or in cages is prohibited</p> <p>You must not keep piglets on flat decks or in piglet cages. <i>(EC) 2018/848 Annex II Part II(1.6.8)</i></p> | <p> A sourcing requirement applies for SA processors.</p> |
| <p>SA NI 3.9.4 Keeping calves in individual pens</p> <p>3. You may only house your calves in individual pens for veterinary reasons</p> <p>4. You must not house calves in individual pens after they are 7 days old unless specifically required for veterinary reasons.</p> <p>5. When a calf is treated individually for veterinary reasons, it shall be kept in spaces that have a solid floor and shall be provided with straw bedding. The calf must be able to turn around easily and to lie down comfortably at full length. <i>(EC) 2018/848 Annex II Part II(1.6.3)(1.7.5)(1.9.1.2 (c)(d)</i></p> | |

| | |
|---|--|
| <p>SA NI 3.9.5 Exceptional production rules for tethering As an exception, due to climatic, geographical or structural constraints, competent authorities may authorise cattle in small holdings to be tethered if it is not possible to keep them in groups appropriate to their behaviour requirements. The animals concerned are to have daily access to pasture during the grazing period, or at least twice a week access to open air exercise areas where conditions preclude access to pasture. <i>(EC) 2018/848 Annex II Part II(1.7.5)</i> <i>Soil Association higher standard</i></p> | <p>This provision only applies to small, traditional holdings where geographical and structural differences in agriculture and climatic constraints require the use of this exception.</p> <p>We do not allow the use of this provision in the NI as NI is not subject to the same geographical and structural constraints as found in the mountainous regions of mainland Europe.</p> |
| <p style="text-align: center;">Why?</p> <p>These standards comply with European Commission organic regulation 2018/848, which has replaced regulations 834/2007 and 889/2008. The Soil Association has identified this standard as an area where the new regulation is less strict, therefore the requirement will be kept at the same level as the previous regulation and marked as a Soil Association higher standard. This standard will undergo a review process in 2023 to determine whether it should be brought into line with 2018/848, or should remain a higher standard.</p> | |

| SA NI 3.10 Feeding livestock | |
|--|---|
| <p>What is this chapter about? The aim of these organic standards is to feed organic livestock grass, fodder or feedstuffs produced from the same organic farm, which meet the nutritional needs of the animals at every stage of their lives. This section includes how the nutritional needs of organic animal are met and includes which additives and minerals are permitted in organic feeds and the conditions of their use.</p> | |
| Standards | Guidance |
| <p>SA NI 3.10.1 Meeting the nutritional needs of your livestock You must feed your livestock organic or in-conversion feed that meets their nutritional needs at all stages of their development. Restricted feeding shall not be permitted in livestock production unless justified for veterinary reasons. <i>(EC) 2018/848 Annex II Part II(1.4.1)(b)</i></p> | <p>Routine monitoring of your animals is necessary to check that their nutritional demands are being met at each stage of the production cycle. You can use a range of measures to assess the nutritional status of your animals, for example, body condition, cleanliness and diarrhoea, skin and coat condition, body weight and mortality (for lambs). If you would like more information and support on monitoring the welfare of your animals see our Advisory Support pages or contact Producer Support or the certification team.</p> <p>Young mammals must be fed sufficient colostrum and milk and only weaned after the minimum ages referred to in standard 3.10.09 and when they are taking in sufficient quantities of solid food.</p> |

| | |
|---|---|
| | The welfare of your animals will be assessed at inspection and your inspector will use the welfare outcomes measures described above to determine whether you are meeting this standard. |
| <p>SA NI 3.10.2 Force feeding is prohibited</p> <p>You must not force feed your livestock. Your feeding practices must always respect the normal nutritional patterns for each species and the animals' welfare at each stage of the rearing process; force-feeding is forbidden.</p> <p><i>(EC) 2018/848 Annex II Part II(1.4.1)(d)</i></p> | |
| <p>SA NI 3.10.3 Encouraging anaemia is prohibited</p> <p>The keeping of livestock in conditions, or on a diet, which may encourage anaemia is prohibited.</p> <p><i>(EC) 2018/848 Annex II Part II(1.4.1)(c)</i></p> | <p> A sourcing requirement applies for SA processors.</p> |
| <p>SA NI 3.10.4 Feeding organic and in-conversion feed</p> <ol style="list-style-type: none"> The diet of your organic and converting animals must be based on organic feed composed of feeding stuffs obtained primarily from your holding or from other organic holdings or in-conversion holdings in the same region. You may feed or graze your organic or converting livestock: <ol style="list-style-type: none"> up to 100% in-conversion feed from your own holding and no more than 25% in-conversion feed, forage or grazing from another holding. up to 20% of the total average amount of feed can be first year conversion perennial forage crops and protein crops, only if they are produced from your own holding. When both in-conversion feed and first year conversion feed are being used, the total combined percentage used must not exceed the percentages in point a). These percentages must be based on the annual dry matter intake of feedstuffs of plant origin. <p><i>(EC) 2018/848 Art.6(m)</i> <i>(EC) 2018/848 Annex II Part II(1.4.1)(a) (b)(1.4.3.1)(1.4.3.2)</i></p> | <p>In conversion feed (as defined in standard 2.1.5a) is feed grown on land that had completed one year of conversion before the crop was harvested. This one year of conversion can include any period recognised retrospectively as per standard 2.1.3.</p> <p>Since 100% in-conversion from your own holding is currently permitted under point 2. a), point 3. is effectively redundant.</p> <p>Pig and poultry enterprises can use first year in-conversion land after 6 months if the conditions in standard 3.1.7 have been met.</p> <p> Feed records</p> |

| | |
|---|---|
| <p>SA NI 3.10.5 Feeding herbivores</p> <p>1. Rearing systems for herbivores must be based on maximum use of grazing pasturage according to the availability of pastures in the different periods of the year. You must ensure for your herbivore species that:</p> <ol style="list-style-type: none"> At least 60% of their daily diet on a dry matter basis consists of fresh or dried fodder, roughage or silage, except during the period each year when the animals are under transhumance, and At least 60% of their total diet comes from your own holding, or if this is not possible, feed produced in cooperation with other organic or in-conversion production units and feed operator using feed and feed material from the same region. This percentage shall be raised to 70 % as from 1 January 2024. <p><i>(EC) 2018/848 Annex II Part II(1.9.1.1)(a)(e)(f)(1.9.2.1)(a)(e)</i></p> | <p> Feed records</p> |
| <p>SA NI 3.10.6 Reducing the amount of forage is prohibited</p> <p>For herbivore species, at least 60% of their daily diet on a dry matter basis must consist of fresh or dried fodder, roughage or silage. This must not be reduced below 60%, even during the first few months of lactation.</p> <p><i>Soil Association higher standard</i></p> | <p> Feed records</p> |
| <p style="text-align: center;">Why?</p> <p>Roughage and forage is a critical part of a ruminant's diet and function. Low forage diets can have serious welfare and health implications. They are often associated with breeding strategies that produce very high-yielding dairy cows. Producing large quantities of milk can exceed the capacity of the animal's digestive system to process sufficient nutrients without a detrimental effect on overall health and wellbeing. This approach to feeding and breeding can lead to systems of dairy production in which cows experience excessive hunger, loss of body condition and increased risk of infertility.</p> | |
| <p>Standards</p> | <p>Guidance</p> |
| <p>SA NI 3.10.7 Feeding pigs and poultry</p> <p>1. For your pigs and poultry, you must ensure that:</p> <ol style="list-style-type: none"> roughage, fresh or dried fodder or silage is added to their daily ration. | <p>Roughage, fresh and dried fodder must be fed at all stages of production. When rearing poultry you can feed hay or alfalfa in hay nets. For more ideas on how to enrich chicken's diets with roughage see the FeatherWel website.</p> |

b) at least 30% of their total diet comes from your own holding. Where this is not possible, you may use feed produced in the same region in cooperation with other organic farms or feed business operators.
(EC) 2018/848 Annex II Part II(1.9.3.1)(a)(b)(1.9.4.2)(a)(b)

When animals are on pasture and able to forage and graze, no additional forage or roughage needs to be provided.

Feed records

| Standards | Guidance |
|---|--|
| <p>SA NI 3.10.8 Use of non-organic protein for pigs and poultry</p> <ol style="list-style-type: none"> 1. Where the competent authority has confirmed organic protein feed is not available in sufficient quantity, for pigs up to 35kg and young poultry, you may feed up to 5% non-organic protein feed. 2. This percentage must be calculated per period of 12 months on the dry matter of feed of agricultural origin. 3. At your inspection you must have records to demonstrate that you have not fed more than 5% non-organic protein feed. 4. This exemption will be in place until 31st December 2026. <i>(EC) 2018/848 Annex II(1.9.3.1)(c)(1.9.4.2)(c)</i> | <p>If you are using a feed that is certified as suitable for organic production and it contains some non-organic ingredients, the feed mill will already have demonstrated that organic ingredients are not available. If you are mixing or blending your own feeds then you must demonstrate that suitable organic ingredients are not available.</p> <p> Feed records</p> <p>When the EU Commission reviews this exemption we will update this page.</p> <p>In Northern Ireland, NICA have confirmed the term ‘young poultry’ should be taken to mean under 18 weeks old.</p> |
| <p>SA NI 3.10.9 Feeding young mammals</p> <ol style="list-style-type: none"> 1. Young mammals must be fed natural, organic milk, preferably maternal milk, for a minimum period of: <ol style="list-style-type: none"> a) 90 days for calves and foals b) 45 days for lambs and kids c) 40 days for piglets. <p>Milk replacers containing chemically synthesised components or components of plant origin must not be used during that period.</p> <p><i>(EC) 2018/848 Annex II Part II(1.4.1)(g)</i> <i>(EC) 2020/464 Art. 2</i> <i>(EC) 2020/464 Art. 9</i></p> | <p>Maternal milk is milk from the mother; natural milk is from the glands of a mammal. Natural milk can come from other species provided that it meets the nutritional and health needs of the species you are feeding it to. Milk powder is considered as natural milk as long as it only contains milk powder.</p> <p>Milk powder containing vegetable oil and milk replacers is not considered as natural milk and therefore must be regarded as a concentrate for feed calculations during the minimum periods set out in this standard.</p> <p>You should have a plan in place to provide an organic source of colostrum. In an emergency you may feed non-organic milk replacer to young mammals until they are 72 hours old. However, if you feed them non-organic milk replacer for any longer they will lose their organic status.</p> <p>Proper care of youngstock is critical for their long-term health and survival. If a newborn is unable to suckle a bottle, or consume the full amount of colostrum, then a stomach tube should be used. This is a skilled technique which requires training to ensure the correct the placement of the tube. See how to safely tube a calf using the AHDB Colostrum Feeding video here and guidance on tubing a lamb here.</p> |

| <p>SA NI 3.10.10 Feeding of waste milk to calves is restricted You must not feed your calves milk taken from dairy cows during the statutory withdrawal period for antibiotic treatments.</p> <p style="text-align: right;"><i>Soil Association higher standard</i></p> | <p>The feeding of colostrum is excluded from this requirement. We recommend that you use stored colostrum where available, in preference to colostrum taken from cows during the statutory withdrawal period for antibiotic treatments.</p> |
|---|---|
| <p style="text-align: center;">Why?</p> <p>Milk produced by cows that have been treated with antibiotics may contain antimicrobial residues. During the withdrawal period for antibiotic treatments, milk has to be withdrawn from the human food chain and this waste milk is often fed to calves. This approach to feeding waste milk promotes the development of antibiotic-resistant bacteria in calves.</p> | |
| Standards | Guidance |
| <p>SA NI 3.10.11 Exceptional rules on feed due to catastrophic circumstances</p> <ol style="list-style-type: none"> 1. For the feeding of herbivores your competent authority may authorise, on a temporary basis, the reduction of the percentage, on a daily basis, of fresh or dried fodder, roughage or silage detailed in 3.10.5 provided that the animal's nutritional requirements at the various stages of its development are met. 2. Your competent authority may authorise on a temporary basis the use of non-organic feed under catastrophic circumstances when forage is lost or when restrictions are imposed. 3. Upon approval by the competent authority you must keep documentary evidence of the use of this exception. <p style="text-align: right;"><i>(EC) 2018/848 Art. 22(2)(3)</i> <i>(EC) 2020/2146 Art. 3(3)</i></p> | <p>Please refer to standard 1.6.4 for more detailed rules on catastrophic events.</p> <p>The certification team can submit a request to the competent authority on your behalf. This permission needs to be in place before any action takes place.</p> |
| <p>SA NI 3.10.12 Buying feed When you use commercial, compounded or blended feeds they must be licensed by an organic certification body and comply with organic standards.</p> <p style="text-align: right;"><i>(EC) 2018/848 Art. 1</i> <i>(EC) 2018/848 Art. 2</i> <i>(EC) 2018/848 Art. 3</i> <i>(EC) 2018/848 Annex I</i></p> | <p>If you are sourcing organic feed from a processor not certified to Soil Association standards you will need to ensure that it does not contain calcified seaweed, as set out in standard 3.10.15.</p> |

SA NI 3.10.13 Use of additional products and substances in feed and feed supplements

1. You may only use the products and substances in standard 3.10.14 below if they are necessary to maintain animal health, welfare and vitality and to contribute to an appropriate diet which fulfils the physiological and behavioural needs of your animals, or if it is impossible to produce or preserve feed without them. Their use is subject to the specific conditions in the table.
2. The products in the table below may only be used if they are authorised for your intended use in your country.

(EC) 2018/848 Art.24(1)(a-f)(3)(e)(i)(ii)(iv)

(EC) 2018/848 Annex II Part V(2.3)

(EC) 2018/848 Art. 9(3)

(EC) 2018/848 Annex II Part II (1.4.1)(b)(i)

(EC)2021/1165 Art. 3

(EC)2021/1165 Art. 4

(EC)2021/1165 Annex III

You must be able to justify the use of additional feed products, supplements and substances. For example:

- by forage or soil analysis show that your home grown feeds are deficient,
- with blood or tissue analysis, or details of previously identified deficiencies in your stock,
- referencing a known species specific nutritional need that cannot be met through feeding organic feed materials
- where a positive welfare outcome will result from the inclusion of the **additional feed product in the livestock's ration**

The products you use should target the nutritional needs as closely as possible and must be used in compliance with the conditions set in the table below.

Mineral licks must be free from additives and ingredients not permitted in these standards. Contact the certification team for more information on using mineral and feed blocks.

Boluses are acceptable if the components are listed in 3.10.14 with the exclusion of the metal ballast.

Records of any feed supplements used

Your livestock management plan should include details of any additional feed products and supplements fed along with the reason for their use.

All products must also be authorised under [*Regulation \(EC\) 1831/2003*](#), with the exception of:

- organic feed materials of animal origin
- non-organic feed materials of plant or animal origin, or fermentation (by-products) from micro-organisms, the cells of which have been inactivated or killed
- feed materials of mineral origin
- products from sustainable fisheries
- non-organic spices, herbs and molasses

| | | If you use non-organic spices, herbs or molasses you must demonstrate that the organic form is not available. |

| Standards | Guidance |
|--|----------|
| <p>SA NI 3.10.15 Use of calcified seaweed is prohibited You must not use calcified seaweed, lithothamne or maerl when extracted from the sea in livestock feeds. <i>Soil Association higher standard</i></p> | |
| <p style="text-align: center;">Why?</p> <p>Calcified seaweed, lithotham and maerl refer to a group of coralline, primarily of the species <i>Phymatolithon calcateum</i> and <i>Lithothamnion corallioides</i>. Calcified seaweed beds are relatively scarce and are important habitats which hold impressive levels of biodiversity, harboring many rare and commercially valuable species. Owing to their extremely slow growth rate, calcified seaweed beds are very fragile and cannot sustain even limited extraction without deterioration.</p> <p>Commercial extraction from the sea has already led to the destruction of several beds in Europe and current levels of protection provided are unlikely to prevent further destruction and deterioration. We therefore prohibit the use of calcified seaweed when extracted from the sea in Soil Association organic standards.</p> | |
| Standards | Guidance |
| <p>SA NI 3.10.16 Synthetic amino-acids You must not use synthetic amino-acids. <i>((EC) 2018/848 Annex II Part II(1.4.4)(f))</i></p> | |

SA NI 3.11 Transporting and handling your animals

What is this chapter about?

This section contains standards on transporting and handling organic animals.

| Standards | Guidance |
|---|--|
| <p>SA NI 3.11.1 Transport and handling</p> <ol style="list-style-type: none"> 1. You must minimise any stress and suffering during handling and transport. 2. The duration of transport must be minimised. 3. You must comply with the rules on transport of animals as set out in regulation (EC)1/2005 4. You must not tranquilise any of your livestock before or during transport. <p><i>(EC) 20128/848 Annex II Part II (1.7.7)</i> <i>(EC) 20128/848 Annex II Part II (1.7.6)</i></p> | <p>The welfare of animals in transport is the responsibility of both those sending and receiving the livestock. Animal transport needs to be planned and managed to ensure livestock are not caused unnecessary distress or discomfort. The transport and handling of livestock needs to be kept to a minimum.</p> <p>Transporting ill or injured animals is likely to cause unnecessary stress and suffering. You should avoid transporting these animals where possible.</p> <p>Transporting very young and heavily pregnant animals is likely to cause unnecessary stress. To minimise stress, avoid transporting the following</p> |

animals:

- Cattle over 6 months in-calf (65% of gestation period)
- Ewes over 3 months in-lamb (65% of gestation period)
- Calves under one-month old, or under 12 weeks old without dams
- Lambs and kids under 45 days old without ewes or nannies

Unnecessary long distance travel is prohibited

Journey times must be kept to a minimum. Any long journeys, defined as being

over 8 hours as calculated from first animal loaded to last unloaded, must be justified.

The export or other unnecessary long distance transport of organic animals is not compliant with this standard. For example, you cannot transport organic animals long distances for slaughter when a suitable slaughter facility is available closer to your farm.

Aim to source and sell your organic animals locally. On our website you can advertise and view organic certified [stock](#) and local certified [abattoirs](#). If there are no organically certified abattoirs in your area, you can add a local abattoir to your licence through our local abattoir scheme.

If you sell livestock either through a market or directly, do everything you can to ensure that they are not sent for export out of the UK and/or are then raised in intensive systems. We are particularly concerned about the long distance transport and sale of calves into continental-style veal systems which have been shown to deliver poor animal welfare. For information on this issue see the Beyond Calf Exports Stakeholders forum website [here](#).

Livestock markets

To minimise stress and handling of livestock you should aim to sell or source livestock directly with farmers rather than through a livestock market. If you have no option but to use a livestock market, the handling, care and welfare of the livestock is the responsibility of the livestock owner. The livestock owner is responsible for ensuring organic

| | |
|---|---|
| | <p>standards are met, for example by ensuring that animals are fed organic feed while at market.</p> <p>The welfare of animals at transport is protected by law. Information on the legal requirements in the UK can be found here.</p> <p>The main legislation that governs animal welfare at shows and markets includes the:</p> <ul style="list-style-type: none"> • <i>Animal Welfare Act 2006</i> • <i>Welfare of Animals at Markets Order 1990 (WAMO)</i> • <i>Welfare of Animals at Markets (Amendment) Order 1993</i> • <i>Welfare of Horses at Markets (and Other Places of Sale) Order 1990 (WHAMOPSO)</i> • <i>Welfare of Animals (Transport) (England) Order 2006</i> <p>The owners and keepers of livestock, including persons with temporary responsibility, such as market operators are responsible for safeguarding animal welfare.</p> <p>WAMO is enforced by local authorities who identify problems at markets and Animal and Plant Health Agency officials who regularly visit and inspect markets.</p> |
| <p>SA NI 3.11.2 Use of electric goads is prohibited Loading and unloading animals must be carried out without the use of any type of electrical stimulation to coerce the animals.</p> <p><i>(EC) 2018/848 Annex II Part II(1.7.11)</i></p> | <p>Loading and unloading is the most common circumstance where electrical stimulation is used to coerce animals. In NI the competent authority has confirmed that the use of electric stimulation at any stage of organic production is prohibited.</p> |

| SA NI 3.12 Standards for poultry | |
|---|---|
| What is this chapter about? This section contains all the poultry specific standards for organic poultry production that you must comply with together with the general livestock standards. | |
| Standards | Guidance |
| SA NI 3.12.1 Keeping poultry in cages is prohibited You must not keep poultry in cages. <i>(EC) 2018/848 Annex II Part II(1.6.8)</i> |  A sourcing requirement applies for SA processors. |
| SA NI 3.12.2 Number of birds permitted in each flock Each poultry flock must not contain more than: <ul style="list-style-type: none"> a) 3,000 birds for laying hens <i>(EC) 2020/464 Art. 15(3)</i> b) 1,000 birds for other poultry species. <i>Soil Association higher standard</i> | Under this definition 'laying hens' means laying chickens. A 'flock' means a group of birds that are kept together not mixing with other poultry species, and with their own dedicated indoor and outdoor areas. Other poultry species includes all other laying birds and table birds.  A sourcing requirement applies for SA processors. |
| Why? Flock size is limited to help ensure consistently high levels of animal welfare and encourage use of the range. | |
| SA NI 3.12.3 Separation between flocks <ol style="list-style-type: none"> 1. You may subdivide your house into compartments provided that each flock has its own compartment and separate outdoor area. 2. Compartments and separation of outdoor areas must ensure that contact with other flocks is restricted and that birds from different flocks cannot mix inside or outside the poultry house. <i>(EU) 2020/464 Art. 15(3)</i> <i>(EU) 2020/464 Art. 16(2)</i> 3. All poultry species must be separated by solid partitions from the floor to the ceiling with dedicated airspace, ventilation, food, and water. <i>Soil Association higher standard</i> | See standards glossary for definition of a poultry house. |
| Why? | |

When airspace is shared across multiple flocks it presents biosecurity risks that may increase the likelihood of viral transmission from one flock to another. Physical separation of flocks with solid partitions as well as separation of food and water sources is a biosecurity risk mitigation method. Such separation can support a positive environment inside a poultry shed, reducing noise pollution in flocks that could otherwise be separated with mesh or netting.

| Standards | Guidance |
|--|---|
| <p>SA NI 3.12.4 Maximum permitted area for meat birds</p> <p>The total useable area of poultry houses for meat production on any single unit must not exceed 1,600 m². However, you may provide an additional useable area of housing provided that:</p> <ul style="list-style-type: none"> a) it is not taken into account when calculating stocking density b) it meets the pop-hole requirements for verandas in standards 3.12.14 and 3.12.15. <p style="text-align: right;"><i>(EC)2018/ 848 Annex II Part II (1.9.4.4)</i> <i>(EC) 2020/464 Art. 15(2)</i></p> | <p>The useable area includes all covered areas where the animals have full access 24 hours a day.</p> |

| | | | |
|--|--|---|--|
| SA NI 3.12.5 Floor area for poultry At least 50% of the floor area of your poultry housing must be solid, that is, not of slatted or grid construction. <i>Soil Association higher standard</i> | |  A sourcing requirement applies for SA processors. | |
| <p style="text-align: right;">Why?</p> <p>Giving poultry access to dry, loose litter provides them with a vital material for foraging and dust bathing, allowing them to express these natural behaviours. This reduces the risk of welfare problems developing. Feather pecking is thought to be a redirected foraging or ground-pecking behaviour which can arise when birds do not have the opportunity to express these natural behaviours. This standard requires that Soil Association farmers provide a larger litter area. This will reduce the effect of stocking density on the litter and increase the likelihood that birds will have access to good quality litter all year round.</p> | | | |
| Standards | | Guidance | |
| SA NI 3.12.6 Housing requirements for all poultry species The buildings for all poultry species must meet the following conditions: <div><i>(EC) 2018/848 Annex II Part II(1.9.4.4)</i> <i>(EC) 2020/464 Annex I Part IV</i> <i>(EC) 2020/464 Art. 15(5)</i> <i>(EC) 2020/464 Art. 15(2)</i></div> | | <p>When calculating the internal stocking rate you must exclude the area taken up by nest boxes.</p> <p>If you move batches between housing systems, you must make every effort to ensure that both systems are similar to minimise stress on the birds.</p> <p><u>For guidance on the appropriate number of birds that is equivalent to total maximum liveweight, please speak to your Certification Officer.</u></p> <p> A sourcing requirement applies for SA processors.</p> | |
| | Indoor area (net area available to animals, excluding veranda) | | |
| | Perch | Nest | No animals/m² |
| Laying hens and dual purpose strains raised for meat and egg production | 18 cm/bird | 7 birds per individual nest box, or 120cm ² per bird in communal nests | 6 |
| Table chickens and poulardes | Any combination of perches or raised sitting levels or both providing minimum 5 cm perch/bird or minimum 25 cm ² raised sitting level/bird. | | In fixed housing: 10, with a maximum of 21 kg liveweight/m ² |
| | | | In mobile housing*: 16, with a maximum of 30 kg liveweight/m ² |
| | Indoor area (net area available to animals) | | |

| | | | |
|-------------|---|--|--|
| Turkeys | Any combination of perches or raised sitting levels or both providing minimum 10 cm perch/bird or minimum 100 cm ² raised sitting level/bird | | In fixed housing: 10, with a maximum of 21 kg liveweight/m ² |
| | | | In mobile housing*: 16, with a maximum of 30 kg liveweight/m ² |
| Ducks | 40 cm/bird (only for Muscovy ducks) <i>Soil Association higher standard</i> | | In fixed housing: 10, with a maximum of 21 kg liveweight/m ² |
| | | | In mobile housing*: 16, with a maximum of 30 kg liveweight/m ² |
| Geese | | | In fixed housing: 10, with a maximum of 21 kg liveweight/m ² |
| | | | In mobile housing*: 16, with a maximum of 30 kg liveweight/m ² |
| Guinea fowl | 20 cm/bird <i>Soil Association higher standard</i> | | In fixed housing: 10, with a maximum of 21 kg liveweight/m ² |
| | | | In mobile housing*: 16, with a maximum of 30 kg liveweight/m ² |

*only in mobile housing not exceeding 150m² floor space that is moved regularly during the production cycle, and at least between each batch of poultry, to ensure the availability of vegetation to the birds.

Why?

Muscovy ducks, unlike other domestic ducks, have not descended from the wild mallard and have long claws which allow them to perch and they will roost in trees in the wild. Guinea fowl are also strongly motivated to perch. It is therefore important to provide these species with perches to give them the opportunity to exhibit their behavioural needs.

| Standards | Guidance |
|---|--|
| <p>SA NI 3.12.7 Aerial perches The perch space you provide must be aerial perch space.</p> <p><i>Soil Association higher standard</i></p> | <p> A sourcing requirement applies for SA processors.</p> <p>The following is species-specific guidance.</p> <p>Laying hens The following provisions are not included as perch space:</p> <ul style="list-style-type: none"> • raised or integrated slats • raised or integrated bars on flooring. <p>In NI, the mounting of perches above the litter is prohibited under the Council Directive <i>No 1999/74/EC</i>. For laying hens this regulation also requires that:</p> <ul style="list-style-type: none"> • horizontal distance between aerial perches is at least 30 cm • distance from walls to perches is at least 20 cm • vertical distance between perches must be at least 45 cm <p>The vertical distance from the floor to the perch should also be at least 40 cm, to help prevent vent pecking.</p> <p>Table chickens There is strong scientific evidence to suggest that table chickens are highly motivated to perch. Perch provision can also reduce the severity or incidence of contact dermatitis, such as foot pad dermatitis and hockburn. Where possible you should provide perches. Table chickens prefer grasping structures, such as bar perches. Raised platforms may also fulfil perching requirements and enable heavier birds to elevate themselves off the ground.</p> <p>Turkeys In addition to bar perches or other grasping structures, elevated surfaces, such as bales or platforms may be counted as perch provision.</p> |
| <p style="text-align: center;">Why?</p> <p>Most species have a behavioural motivation to perch. Providing aerial perches allows birds to exhibit a greater range of natural behaviours, reducing the risk of feather pecking and enabling birds to escape from any ground level harassment from other birds.</p> | |

| Standards | Guidance |
|--|--|
| <p>SA NI 3.12.8 Providing litter The solid floor area must be covered with a litter material such as straw, wood shavings, sand, or turf. <i>(EC) 2018/848 Annex II Part II (1.9.4.4)</i></p> | <p>We will assess at inspection whether your litter is suitable and well managed for example whether it is dry and friable.</p> |
| <p>SA NI 3.12.9 Poultry house hygiene For poultry houses for laying hens, a sufficiently large part of the floor area must be available for the collection of bird droppings. <i>(EC) 2018/848 Annex II Part II (1.9.4.4)</i></p> | <p>The system you have in place for the collection of droppings must ensure that there is not a build-up of droppings in the area to which poultry have access.</p> |
| Standards | Guidance |
| <p>SA NI 3.12.10 Artificial light 1. You may use artificial light to prolong the day length up to 16 hours. You must give your poultry a continuous nocturnal rest period of at least 8 hours. <i>(EC) 2018/848 Annex II Part II (1.9.4.4)</i></p> <p>2. If you are not using natural dusk, you must dim the light for an adequate amount of time before it is turned off or use a stepped lighting programme to guide the birds to the perches. <i>Soil Association higher standard</i></p> | <p>A period of at least 10 minutes to dim the lights is recommended for laying hens and at least 30 minutes for table chickens.</p> <p> A sourcing requirement applies for SA processors.</p> |
| <p style="text-align: center;">Why?</p> <p>Poultry use a reduction in light intensity as a signal for night roosting. Gradually dimming the lights allows birds to anticipate changes in light which may prevent stress. In particular, it allows laying hens to find a suitable perch for the night without causing injury. It has been shown to stimulate feeding behaviour in broilers and laying hens which may prevent hunger during the night.</p> | |

| Standards | Guidance |
|---|--|
| <p>SA NI 3.12.11 Feed and water provision</p> <ol style="list-style-type: none"> 1. Your livestock must always have easy access to feed and water. 2. When feed availability from the range is limited, for example due to long term snow cover or dry weather conditions, you must provide your poultry with supplementary roughage. <p><i>(EC) 2018/848 Annex II Part II(1.7.2)</i> <i>(EC) 2018/848 Annex II Part II(1.9.4.4)(i)</i></p> | <p>For animals fed <i>ad lib</i> you must feed them in a way that minimises bullying. This can include providing alternative sources of food on the range, such as suitable vegetation to encourage foraging. For animals which are not given continuous access to feed, you must provide adequate feed space to ensure that all animals can feed at the same time and to avoid competition and aggression. Carefully consider the height of drinkers to ensure all livestock can access the drinking point. The following is a guide to providing adequate feeding space and water supply for different poultry species:</p> <p>Layers</p> <ul style="list-style-type: none"> • Linear feeder space: 10 cm/bird* • Circular feeder space: 4 cm/bird* • Bell drinkers: 1 cm/bird* • Nipple drinkers: one per 10 birds • Drinking troughs: 2.5 cm /bird* <p>Table birds</p> <ul style="list-style-type: none"> • linear feeder space: 2.5cm/bird • circular feeder space: 33cm per 65 birds • bell drinkers: one per 100 birds • nipple drinkers: one per 10 birds • cup drinkers: one per 28 birds <p>Layers and table birds</p> <ul style="list-style-type: none"> • linear drinker space: 2.5cm/bird • circular drinker space: 1cm/bird <p>* These are the minimum number of feeders and drinkers required by the Council Directive 1999/74/EC laying down minimum standards for the protection of laying hens.</p> |

| | |
|---|---|
| <p>SA NI 3.12.12 Access to the outdoor range</p> <p>1. Poultry must be given continuous daytime access to an outdoor range from as early an age as practically possible. This means whenever physiological and weather conditions allow, except in the case of temporary restrictions or obligations imposed by competent authorities.</p> <p><i>(EC) 2018/ 848 Annex II Part II(1.9.4.4)(e)</i> <i>(EC) 2018/ 848 Annex II Part II(1.9.4.4)(d)</i></p> | <p> A sourcing requirement applies for SA processors.</p> |
| <p>2. Access must be given, at the latest, by the ages or for the minimum duration stated in the guidance.</p> <p><i>Soil Association higher standard</i></p> | <p>The age at which your birds can go outside will depend on the time of year and the weather. Access to the range must be given by the following ages:</p> <p>Laying poultry</p> <ul style="list-style-type: none"> • 10 weeks for geese • 10 weeks for turkeys • 12 weeks for laying hens and other species • The second day after placement into the laying shed for laying hens <p>Table poultry</p> <ul style="list-style-type: none"> • 10 weeks for geese or two thirds of their life, whichever is earlier • 10 weeks for turkeys or two thirds of their life, whichever is earlier • Two thirds of their life for other species <p>Beyond these ages we would only expect extreme weather conditions to prevent outdoor access.</p> <p>When you give your poultry access to a range, you may provide a smaller enclosed range to reduce predation risk up until these age limits.</p> |
| <p>Why?</p> <p>Giving poultry early access to the range encourages birds to use the range more. The range provides birds with plenty of opportunities to express natural behaviours, such as ground pecking and foraging. Improved range use has been shown to decrease the risk of injurious feather pecking.</p> | |

| Standards | Guidance |
|--|---|
| <p>SA NI 3.12.13 Stocking density on the range</p> <p>The stocking densities on the range for different poultry species are set out in this table.</p> <p>(EC) 2020/464 Annex I Part 1V (EC) 2020/464 Art. 15(5) (EC) 2020/464 Art. 15(2)</p> | <p>To be regarded as mobile housing, the houses must be moved regularly during the production cycle, and at least between each batch of poultry, to ensure the availability of vegetation to the birds. The new location must provide the poultry access to a different area than was provided for the previous flock.</p> <p>For laying hens only, within the life of a flock you may restrict access to parts of the range to prevent poaching and allow vegetation to recover. Hens must always have access to at least two thirds of the total range area at any one time. Access may only be restricted for up to a third of the total length of time that hens have access to the range.</p> <p>Open water can be included as part of the range space provision for waterfowl.</p> <p> A sourcing requirement applies for SA processors.</p> |

| | Range size available (excluding veranda) | |
|---|--|--|
| Species | Static/fixed housing | Mobile housing |
| Laying hens (including dual purpose strains raised for meat and egg production) | 1,000 birds/ha (1 bird/10 m ²) over the life of the flock <i>Soil Association higher standard</i> | 1,000 birds/ha (1 bird/10 m ²) over the life of the flock <i>Soil Association higher standard</i> |
| Table chickens | 2,500 birds/ha (1 bird/4 m ²) | 4,000 birds/ha (1 bird/2.5 m ²) |
| Poulardes | 2,500 birds/ha (1 bird/4 m ²) | 2,500 birds/ha (1 bird/4 m ²) |
| Ducks | 2,222 birds/ha (1 bird/4.5 m ²) | 2,222 birds/ha (1 bird/4.5 m ²) |
| Guinea fowl | 2,500 birds/ha (1 bird/4 m ²) | 2,500 birds/ha (1 bird/4 m ²) |
| Turkeys | 1,000 birds/ha (1 bird/10 m ²) at any one time | 1,000 birds/ha (1 bird/10 m ²) at any one time |
| Geese | 666 birds/ha (1 bird/15 m ²) at any one time | 666 birds/ha (1 bird/15 m ²) at any one time |
| All subject to ensuring that 170kg of N/ha/year is not exceeded. | | |
| Why? | | |

Soil Association standards set lower outdoor stocking densities for laying hens in all types of housing, than those permitted under the EU Organic Regulation. Laying hens range extensively and are kept on ranges for sustained periods of time. Requiring a lower stocking rate helps prevent damage to the range, ensuring the birds have access to a stimulating environment where they can express their natural behaviours.

| Standards | Guidance |
|---|--|
| <p>SA NI 3.12.14 Easy access to the outside</p> <p>1. Your poultry house must allow all of the birds easy access to the outdoor range.</p> <p>2. Birds must be able to access pop-holes without any obstacle.</p> <p>3. Where pop-holes are raised, a ramp must be provided.</p> <p>4. If your poultry house has a veranda, pop-holes must give the birds easy access from the indoor house to the veranda and from the veranda to the outdoor range.</p> <p>(EC) 2020/464 Art. 15(1) (EC) 2020/464 Art. 4(2)(a)</p> | <p>The following may prevent birds from having easy access to the outdoor range:</p> <ul style="list-style-type: none">• pop-holes which do not give the hens an easy view of the range• poor provision of shade and shelter close to the housing and across the range. |
| <p>SA NI 3.12.15 Pop-hole size and quantity</p> <p>1. Pop-holes to the outdoor range must have a combined length of at least 4m per 100m² of the minimum usable area of the poultry house</p> <p>(EC) 2020/464 Art. 15(1) (EC) 2020/464 Art.4(2)(b)</p> | |
| <p>2. If your poultry house has a veranda, pop-holes from the indoor house to the veranda must have a combined length of at least 4m per 100m² of the minimum usable area of the poultry house. Pop-holes from the veranda to the outdoor range must comply with point 1 above.</p> <p><i>Soil Association higher standard</i></p> | |
| <p>Why?</p> <p>Pop-hole provision is an important part of encouraging regular use of range in poultry flocks. Providing the same pop-hole provision from the poultry house into a veranda as from the poultry house direct to the range can reduce the risk that a veranda becomes a barrier to range use.</p> | |
| <p>SA NI 3.12.16 Range management</p> <p>1. You must design and manage your poultry range to ensure that the range:</p> <p>a) is attractive to the birds and fully accessible to all birds</p> | <p>You must be able to demonstrate how you will maintain vegetation cover on your range at your desired outdoor stocking density. This will need to include how you manage the area outside the pop-holes.</p> |

| | |
|---|--|
| <ul style="list-style-type: none"> b) mainly covered with vegetation, composed of a diverse range of plants. The vegetation must be maintained regularly to reduce the potential for nutrient surpluses. c) provides protective shelter at all times, in the form of shrubs, trees or shelters distributed throughout the entire open air area to ensure that the birds are using the whole range in a balanced way d) permits poultry easy access to adequate numbers of drinking troughs. e) for geese, allows the birds to satisfy their need to eat grass. <p style="text-align: right;"><i>(EC) 2020/464 Art. 16(1-6)</i></p> | <p>Putting down stones, slats or woodchip outside of pop-holes can help you manage poaching. For more information on range management and methods to reduce poaching see the FeatherWel website.</p> <p>Drinkers do not have to be provided outside but must be easily accessible to birds out on the range.</p> <p>Acceptable forms of shelter can include trailers. For more information and ideas on appropriate shelters see the FeatherWel website.</p> <p>For laying hens only: As part of your range management you may rotate your range during the life of the flock. You must always give your hens access to at least two thirds of the total range area at any one time. Access may only be restricted for up to a third of the total length of time that hens have access to the range.</p> |
| <p>SA NI 3.12.17 Range quality and cover</p> <ol style="list-style-type: none"> 1. The range must be of a suitable design and actively managed to encourage birds outside and to promote full and extensive use of the range. The minimum outdoor space required for the flock must be available within the distances set out in the guidance below. 2. Your range of shelters must provide adequate protection from the inclement weather and overhead predators. 3. Natural cover must be provided at an area equal to at least 5% of the area available to your poultry. <ol style="list-style-type: none"> a) If the natural cover does not provide cover all year round or if the natural cover is immature, you must provide supplementary cover during the period in which sufficient cover is not provided. 4. At least one area of natural cover or shelter must be available within 20m of the pop-holes. 5. Points 2 -4 above apply for laying chickens, meat chickens, turkeys and guinea fowl. They do not apply to geese and ducks. <p style="text-align: right;"><i>Soil Association higher standard</i></p> | <p>The distance between shelters or natural cover should be no more than 20 metres to promote full range use. For trees this can be calculated from the outer most branch of a tree. New trees should be planted no more than 30 metres apart, trunk to trunk.</p> <p>Natural cover may include trees, perennial shrubs, bushes, hedgerows, or cover crops, such as artichokes, kale, millet, fodder rape and corn. To be included as part of the 5% requirement, natural cover must be accessible to the poultry. Long grass does not count towards your natural cover provision because it does not encourage birds to range and can cause harm if eaten.</p> <p>Not all natural cover has to provide actual overhead protection, but it must encourage range use by providing refuge for the birds. For example, it can include brashings from trees or hedges.</p> <p>If you use deciduous trees or other forms of natural cover that only provide shelter for part of the year, you must provide supplementary cover or shelter. The supplementary shelter can be artificial, for example arcs, or natural, for</p> |

| | |
|--|---|
| | <p>example piles of brashings. The supplementary cover must make up the 5% natural cover requirement when the natural cover is not providing shelter.</p> <p>Narrow ranges which require birds to walk long distances to access a portion of the range do not encourage good use of the range. The minimum outdoor space required for the flock must be available within the following distance from the house:</p> <ul style="list-style-type: none"> • 120m for layers, turkeys, geese and guinea fowl • 50m for table chickens and ducks <p>Any additional space provided on the range may extend further than this limit and does not need to be included when calculating your 5% natural cover requirement. If geese or ducks are walked out to pasture, narrow paddocks or fields may be appropriate.</p> <p> A sourcing requirement applies for SA processors.</p> |
|--|---|

Why?

The provision of natural shelter, particularly trees, is an effective method to encourage birds to range and range further, which in turn will lead to animal welfare and environmental benefits. Shelter helps protect poultry from adverse weather conditions and predators, as well as providing birds with more choice and variation in their environment.

Tree cover in particular can also provide other environmental benefits. These include soil stabilisation, reduced rainwater runoff and nutrient leaching, carbon sequestration, help with capturing ammonia emissions and providing buffers for sensitive habitats. Water infiltration is 60 times more effective on pasture with trees compared to pasture without trees, which helps prevent the range from becoming waterlogged.

| Standards | Guidance |
|--|--|
| <p>SA NI 3.12.18 Resting the range for laying poultry</p> <p>1. For laying poultry the range must be rested for sufficient time to allow vegetation to grow back.</p> | <p>It is your responsibility to ensure that the range is rested for sufficient time to allow vegetation to regrow and to manage disease risk. You must be able to justify your resting periods and explain how you will maintain vegetation cover and disease risk on your range at your desired outdoor stocking density. The resting periods may need to be extended to allow vegetation to recover and to control disease risk.</p> |
| <p>2. This must be no less than nine months between each flock.</p> <p><i>Soil Association higher standard</i></p> | |

| <p>3. You must keep records to demonstrate that this resting period has been applied.</p> <p>4. These requirements do not apply if your poultry are:</p> <ul style="list-style-type: none"> a) not reared in batches b) are not kept in runs, and c) are free to roam throughout the day. <p style="text-align: right;"><i>(EC) 2018/848 Annex II Part II(1.9.4.4)(c)</i></p> | <p>Grass and vegetation cover on the range may be used as an indicator to assess whether sufficient time has been left between batches of poultry. Putting down stones, slats or woodchip outside the pop-holes can help you manage poaching.</p> <p> Records of the applied resting period</p> <p>For laying chickens only: You may restrict access to part of the range within the life of a flock to help you manage vegetation cover. Your hens must always have access to at least two thirds of the total range area at any one time. Access may only be restricted for up to a third of the total length of time that hens have access to the range.</p> <p> A sourcing requirement applies for SA processors.</p> |
|--|---|
| <p style="text-align: center;"><i>Why?</i></p> <p>Vegetation cover on the range is important as it encourages birds outside giving them plenty of opportunities to perform natural behaviours such as ground pecking and foraging. Muddy areas on the range can present health and welfare risks and can lead to poor litter quality from birds tracking mud into the house.</p> <p>Soil Association standards require a longer resting period for laying poultry because they live for longer and range more widely than table birds, which puts more pressure on the range in terms of vegetation depletion and manure deposition. Giving a nine month fallow period allows vegetation to fully recover between flocks, using up the excess nutrients in the soil and also helps break disease cycles.</p> | |
| Standards | Guidance |
| <p>SA NI 3.12.19 Resting the range for table poultry</p> <p>1. For table poultry the range must be rested for sufficient time to allow vegetation to grow back.</p> <p>2. This must be no less than two months per year.</p> <p>3. You must keep records to demonstrate what resting period has been applied.</p> <p>4. These requirements do not apply if your poultry are:</p> <ul style="list-style-type: none"> a) not reared in batches b) are not kept in runs, and c) are free to roam throughout the day. <p style="text-align: right;"><i>(EC) 2018/848 Annex II Part II (1.9.4.4) (c)</i></p> | <p>It is your responsibility to ensure that the range is rested for sufficient time to allow vegetation to regrow and to manage disease risk. You must be able to justify your resting periods and explain how you will maintain vegetation cover and disease risk on your range at your desired outdoor stocking density. The resting periods may need to be extended to allow vegetation to recover and to control disease risk.</p> <p>Grass and vegetation cover on the range may be used as an indicator to assess whether sufficient time has been left between batches of poultry. Putting down stones, slats or woodchip outside the pop-holes can help you manage poaching.</p> |

| | |
|---|--|
| |  Records of the applied resting period |
| <p>SA NI 3.12.20 Keeping poultry indoors due to restrictions</p> <p>Where poultry are kept indoors due to restrictions or obligations imposed on the basis of Community legislation, they must have permanent access to sufficient quantities of roughage and suitable material to meet their ethological needs.</p> <p><i>(EC) 2018/848 Annex II Part II(1.9.4.4)(d)</i> <i>(EC) 2018/848 Annex II Part II(1.9.4.4)(f)</i> <i>(EC) 2018/848 Annex II Part II(1.9.4.4)(j)</i></p> | <p>Suitable material includes:</p> <ul style="list-style-type: none"> • straw/hay bales • alfalfa bales/blocks • vegetables • other vegetation, such as foliage. <p>At least two enrichments per 500 hens.</p> <p> For more information on enrichment materials see the Featherwel website.</p> |
| <p>SA NI 3.12.21 Disease prevention</p> <p>Buildings must be emptied of livestock between each batch of poultry reared. The buildings and fittings must be cleaned and disinfected during this time.</p> <p><i>(EC) 2018/848 Annex II Part II (1.9.4.4)(c)</i></p> | <p>Cleaning and disinfecting procedures need to ensure there is no dirt, dust, debris, or litter present when washing is complete.</p> <p>The health and performance of the next flock can indicate that appropriate resting, cleaning and disinfecting procedures are in place. Problems with red mite and bacterial diseases such as <i>E.coli</i> or <i>Mycoplasma</i> can be a result of poor hygiene, inadequate cleaning of buildings and feed/drinker lines between flocks.</p> |
| <p>SA NI 3.12.22 Access to water for waterfowl</p> <ol style="list-style-type: none"> 1. To meet their species-specific needs and welfare requirements, water fowl must have access to a stream, pond, lake or pool, whenever weather and hygiene conditions allow. 2. When weather conditions do not allow point 1 (above), birds must have access to water which enables them to submerge their heads so as to clean plumage; 3. You must maintain and manage the water to prevent the build-up of disease. <p><i>(EC) 2018/848 Annex II Part II(1.5.1.7)</i> <i>(EC) 2018/848 Annex II Part II(1.9.4.1)</i></p> | <p> A sourcing requirement applies for SA processors.</p> <p>To meet their species-specific needs, ducks need full body access to water.</p> <p>Ducks use different depths of water to perform different behaviours and you should provide a varying water depth to meet their behavioural needs.</p> |

| | |
|---|--|
| <p>SA NI 3.12.23 Enrichment in the house You must provide suitable enrichment material in your poultry house.</p> <p><i>Soil Association higher standard</i></p> | <p>To provide suitable enrichment for flocks of more than 500 birds you must:</p> <ul style="list-style-type: none"> - Provide enough enrichment materials across the whole house to enable all birds to access it. This must be no less than two items per 500 birds but you may find that more are required to meet the needs of your flock. - Change enrichment items frequently to maintain the birds' interest. - Ensure that any enrichment materials which contain feed materials are organic. - Provide destructible enrichment, including forage, e.g. lucerne bales, bagged chopped alfalfa, hanging vegetables or cardboard egg trays. <p>It is recommended that flocks of 500 birds or less are also provided with this type of enrichment. You will be expected to use enrichment as a management tool to address issues in the flock as necessary.</p> <p>Enrichment items can include pipe or barrel 'tunnels', hanging items, pecking materials and innovative feeders. For more information on enrichment materials see the Featherwel website.</p> |
| <p>Why?</p> <p>Enrichment in poultry housing is key to promote positive indoor foraging behaviour, a varied indoor environment with plenty of pecking materials has been shown to reduce feather pecking within a flock. Feather loss due to feather pecking is one of the key welfare outcome assessment criteria. All types of injurious pecking appear to be a form of normal pecking redirected inappropriately to another bird. If other pecking substrates such as litter are less attractive than the feathers of a neighbour, then pecks may be directed at feathers instead.</p> | |
| <p>Standards</p> | <p>Guidance</p> |
| <p>SA NI 3.12.24 Minimum slaughter ages for poultry To prevent the use of intensive rearing methods, poultry shall either be reared until they reach a minimum age or else must come from slow-growing poultry strains suitable for outdoor rearing. Where slow growing poultry strains are not used the following minimum age at slaughter must be:</p> <ol style="list-style-type: none"> 81 days for chickens 49 days for Peking ducks 70 days for female Muscovy ducks 84 days for male Muscovy ducks 92 days for Mallard ducks 94 days for guinea fowl | <p>In the UK, Defra regards strains as 'slow growing' under organic management if the live weight gain per day does not exceed 45g or in the case of turkeys, 55g per day, averaged over the life of the bird.</p> <p>You may use certain poultry strains with intermediate growth rates.</p> <p>For permitted breeds and strains of chicken, see standard 3.2.1.</p> |

| | |
|--|--|
| g) 140 days for male turkeys and roasting geese h) 100 days for female turkeys <i>(EC) 2018/848 Annex II Part II (1.9.4.1)</i> | |
| SA NI 3.12.25 Live plucking of poultry is prohibited You must not pluck live birds. <i>(EC) 2018/848 Annex II Part II (1.9.4.3)</i> | |

SA NI 3.13 Additional standards for pullet rearing and brother roosters

What is this chapter about?

This section contains the standards you must comply with for the production of organic pullets and brother roosters. You must also comply with the applicable standards in:

- **Chapter 1 'General standards for farming and growing'**
- **Chapter 2 'Standards for organic land and crops'**
- **Chapter 3 'Standards for organic livestock production'**

| Standards | Guidance |
|--|--|
| SA NI 3.13.1 Origin of stock 1. You must use organic day old chicks from organically managed breeding flocks if they are available. 2. If organic chicks are not available you may use non-organic chicks but you must manage them to full organic standards from less than three days old. 3. You must have prior authorisation from your competent authority before bringing in any non-organic poultry. <i>(EC) 2018/848 Annex II Part II (1.3.1)</i> <i>(EC) 2018/848 Annex II Part II (1.3.4.1)</i> | <p>If you are bringing in non-organic poultry you must first have permission from your competent authority before you bring them onto the holding. In the UK, permission is granted by the competent authority and we will submit an application on your behalf. You must show us that organic poultry is not available in sufficient numbers.</p> <p>We will need the following details from you to submit to the competent authority:</p> <ul style="list-style-type: none"> • why you cannot source them organically • which organic suppliers you have contacted • the number of birds you need • the number of non-organic birds you plan to bring in and when • the name of your suppliers • whether any suppliers will be able to supply you with organic birds in future <p>A form with all the relevant questions is available on our website or from the certification team.</p> |
| SA NI 3.13.2 Access to the outdoor range | |

| <p>1. Poultry must be given continuous daytime access to an outdoor range from as early an age as practically possible. This means whenever physiological and weather conditions allow, except in the case of temporary restrictions or obligations imposed by competent authorities.</p> <p>2. Where pullets are kept indoors under the above restrictions, they may be given access to a veranda with a wire mesh barrier to keep other birds out.</p> <p style="text-align: right;"><i>(EC) 2018/848 Annex II Part II(1.9.4.4)(e)</i> <i>(EC) 2018/848 Annex II Part II(1.9.4.4)(d)</i> <i>(EC) 2018/848 Annex II Part II(1.9.4.4)(f)</i> <i>(EC) 2018/848 Annex II Part II(1.9.4.4)(j)</i></p> | <p>The age at which your birds can go outside will depend on the time of year and the weather. Access to the range must be given from at least the following ages:</p> <ul style="list-style-type: none"> • 10 weeks for geese • 10 weeks for turkeys • 12 weeks for laying hens and other species <p>Beyond these ages we would only expect extreme weather conditions to prevent outdoor access.</p> <p>If you give your poultry access to a range before these ages, you may provide a smaller enclosed range to reduce predation risk for a short period of time while they are at higher risk from predation.</p> |
|---|---|
| <p>3. Outdoor access must be given from at least the minimum ages stated in the guidance.</p> <p style="text-align: right;"><i>Soil Association higher standard</i></p> | |
| <p style="text-align: center;">Why?</p> <p>Giving poultry early access to the range encourages birds to use the range more. The range provides birds with plenty of opportunities to express natural behaviours, such as ground pecking and foraging. Improved range use has been shown to decrease the risk of injurious feather pecking.</p> | |
| Standards | Guidance |
| <p>SA NI 3.13.3 Outdoor stocking density</p> <p>The maximum outdoor stocking rate must not exceed 2,500 birds per hectare (4m²/bird).</p> <p style="text-align: right;"><i>Soil Association higher standard</i></p> | |
| <p>SA NI 3.13.4 Resting the range</p> <p>1. You must rest the pasture that the pullets have access to for at least two consecutive months per year and one year in three.</p> <p style="text-align: right;"><i>Soil Association higher standard</i></p> <p>2. This requirement will not apply:</p> <p>a) where birds are on the land for less than one third of the year</p> | |

| | |
|---|--|
| <p>b) if you have less than 50 birds that are free to roam without a fenced range area. <i>Soil Association higher standard</i></p> | |
| <p>SA NI 3.13.5 Indoor stocking density and perch space 1. The stocking rate in the house must not exceed: a) In fixed housing: 10 birds/m², <i>Soil Association higher standard</i> with a maximum of 21 kg liveweight/m² <i>(EC) 2018/848 Annex II Part IV (2)</i> b) In mobile housing of less than 150m² floor space: 16/m² <i>Soil Association higher standard</i> with a maximum of 30 kg liveweight/m² <i>(EC) 2018/848 Annex II Part IV (2)</i> 2. You must provide a minimum of 15cm aerial perch space per pullet. <i>Soil Association higher standard</i></p> | |
| <p>SA NI 3.13.6 Number of birds permitted in each house You must not have more than 3,000 pullets in a flock. <i>Soil Association higher standard</i></p> | |
| <p>SA NI 3.13.7 Artificial light 1. You may use artificial light to prolong the day length up to 16 hours but the day must end with dusk. 2. This does not apply to birds in the brooding phase. <i>Soil Association higher standard</i></p> | |

SA NI 3.14 Additional standards for poultry breeding flocks

What is this chapter about?

This section contains the specific standards for organic breeding poultry production that you must comply with. Breeding hens must also comply with all the standards for laying hens. You must also comply with the applicable standards in:

- Chapter 1 'General standards for farming and growing'
- Chapter 2 'Standards for organic land and crops'
- Chapter 3 'Standards for organic livestock production'

| Standards | Guidance |
|--|--|
| SA NI 3.14.1 Registering your breeding flock You must inform your national government agriculture department that you have a breeding flock. <i>Soil Association higher standard</i> | Your national government agriculture department will tell you whether you need to register it under the Poultry Breeding Flocks and Hatcheries Act. |
| SA NI 3.14.2 Feeding breeding poultry 1. You must provide your poultry breeding flocks with access to feed throughout the day. <i>(EC) 2018/848 Annex II Part II(1.7.2)</i> | |
| 2. You must not restrict feed for cockerels. <i>Soil Association higher standard</i> | |
| SA NI 3.14.3 Breeds The breeds that you choose for table poultry breeding flocks must be suitable for organic, free range management and produce offspring that are hardy and 'slow growing' . <i>(EC) 2018/848 Annex II Part II(1.3.2)(d)</i> | Some breeds and strains of chicken are not suitable for organic systems because research has shown them to be predisposed to welfare problems. The breed you use must either: <ul style="list-style-type: none"> • meet Defra's definition of slow-growing (no more than 45g per day), or • be on the RSPCA's list of welfare-approved free-range broiler breeds |
| SA NI 3.14.4 Welfare of hens You may, where necessary: <ol style="list-style-type: none"> a) buy cockerels that have been despurred b) carry out spur blunting of cockerels <i>(EC) 2018/848 Annex II Part II (1.7.7)</i> | We will approve the buying of cockerels that have been despurred or the carrying out of spur blunting if you can demonstrate it is necessary animal welfare. |

| <p>SA NI 3.14.5 Access to the outdoor range</p> <ol style="list-style-type: none"> Poultry must be given continuous daytime access to an outdoor range from as early an age as practically possible. This means whenever physiological and weather conditions allow, except in the case of temporary restrictions or obligations imposed by competent authorities. Where breeder flocks are kept indoors under the above restrictions, they may be given access to a veranda with a wire mesh barrier to keep other birds out. <i>(EC) 2018/848 Annex II Part II (1.9.4.4)(e)</i> <i>(EC) 2018/848 Annex II Part II (1.9.4.4)(d)</i> <i>(EC) 2018/848 Annex II Part II (1.9.4.4)(f)</i> <i>(EC) 2018/848 Annex II Part II (1.9.4.4)(j)</i> <p>3. Access must be given from at least the minimum ages stated in the guidance. <i>Soil Association higher standard</i></p> | <p>The age at which your birds can go outside will depend on the time of year and the weather. Access to the range must be given from at least the following ages:</p> <ul style="list-style-type: none"> • 10 weeks for geese • 10 weeks for turkeys • 12 weeks for laying hens and other species • The second day after placement into the laying shed for laying hens <p>Beyond these ages we would only expect extreme weather conditions to prevent outdoor access.</p> <p>If you give your poultry access to a range before these ages, you may provide a smaller enclosed range to reduce predation risk for a short period of time while they are at higher risk from predation.</p> |
|--|--|
| <p style="text-align: right;">Why?</p> <p>Giving poultry early access to the range encourages birds to use the range more. The range provides birds with plenty of opportunities to express natural behaviours, such as ground pecking and foraging. Improved range use has been shown to decrease the risk of injurious feather pecking.</p> | |
| Standards | Guidance |
| <p>SA NI 3.14.6 Stocking density on the range</p> <p>You may have up to:</p> <ol style="list-style-type: none"> chickens: 1,000 birds/ha (10m²/bird) turkeys: 800 birds/ha (12.5m²/bird) ducks: 1,000 birds/ha (10m²/bird) geese: 100 birds/ha (100m²/bird). <p><i>Soil Association higher standard</i></p> | |
| <p>SA NI 3.14.7 Rotation of pasture</p> <p>You must rotate the pasture within the life of each flock. <i>Soil Association higher standard</i></p> | |
| <p>SA NI 3.14.8 Number of birds permitted in each house</p> <p>The number of birds in each poultry house must not exceed 500 birds. <i>Soil Association higher standard</i></p> | |

SA NI 3.15 Additional standards for poultry hatcheries

What is this chapter about?

The EU Organic Regulation states that organic systems should aim to complete the production cycles of livestock with organically reared animals and that organic livestock products should come from animals that have been raised on organic holdings since birth or hatching ((EC) 834/2007 Art. 5 (i)). However, it does not yet contain detailed rules for the management of organic hatcheries. In their absence, the following standards have been adapted from EU Regulation 834/2007 by applying *mutatis mutandis* to provide a certification framework for organic hatchery production. You must also comply with the applicable standards in:

- **Chapter 1 'General standards for farming and growing'**
- **Chapter 2 'Standards for organic land and crops'**
- **Chapter 3 'Standards for organic livestock production'**

| Standards | Guidance |
|---|---|
| SA NI 3.15.1 Registering your hatchery You must inform your national government agriculture department that you have a breeding flock. <i>Soil Association higher standard</i> | Your national government agriculture department will tell you whether you need to register it under the Poultry Breeding Flocks and Hatcheries Act. |
| SA NI 3.15.2 Origin of stock If you intend to sell day old chicks as organic, you must: <ol style="list-style-type: none"> a) use fertile hatching eggs from an organically managed breeding flock, and b) mark the fertile eggs or the egg trays so that it is clear from which breeding flock they came. <i>(EC)2018/848 Art.6(n)</i> | |
| SA NI 3.15.3 Conversion to organic You may have a non-dedicated hatchery for a transitional period only. <i>Soil Association higher standard</i> | You must provide a plan showing: <ul style="list-style-type: none"> • how and when you will change to a dedicated organic hatchery • how you will make sure you can keep the organic and the non-organic eggs and day-old chicks separate, and • how you will ensure that there is no risk that you or anyone else could substitute non-organic eggs/chicks for organic eggs/chicks. |
| SA NI 3.15.4 Handling chicks 1. You must have a system that keeps the handling of chicks to a minimum and reduces the risk of injury. <i>(EC) 2018/848 Annex II Part II (1.7.7)</i> | |

| | |
|---|---|
| <p>2. You must not use automatic systems for the separation and sorting of chicks.</p> <p><i>Soil Association higher standard</i></p> | |
| <p>SA NI 3.15.5 Removing chicks from the hatchery</p> <p>1. You must not remove chicks from the hatchery until they are dry enough to maintain body temperature.</p> <p><i>(EC) 2018/848 Annex II Part II(1.7.2)</i></p> <p>2. You must examine trays on removal from the hatchery and:</p> <ul style="list-style-type: none"> a) remove any dead chicks and debris, and b) humanely destroy any sick, deformed or injured chicks. <p><i>(EC) 2018/848 Annex II Part II(1.7.7)</i></p> | |
| <p>SA NI 3.15.6 Transporting chicks</p> <p>You must:</p> <ul style="list-style-type: none"> a) deliver the day old chicks to the rearing unit within 24 hours of removal from the hatchery b) plan transport so that you minimise waiting times c) maintain a temperature in the holding facilities and during transit that is comfortable for the chicks, and d) use transport boxes that provide: <ul style="list-style-type: none"> i) at least 21cm²/bird ii) enough height to allow normal posture iii) adequate ventilation, and iv) adequate warmth. <p><i>Soil Association higher standard</i></p> | |
| <p>SA NI 3.15.7 Contingency plan</p> <p>You must have a written contingency plan that:</p> <ul style="list-style-type: none"> a) describes the workings of the hatchery, and b) explains how you will make sure that the welfare of the chicks will not be compromised if there is any disruption to services in the hatchery. <p><i>Soil Association higher standard</i></p> | |
| <p>SA NI 3.15.8 Records you must keep</p> <p>You must keep the following records:</p> | <p> Hatchery records. See standard for more detail.</p> |

- | | |
|---|--|
| <ul style="list-style-type: none">a) the origin of eggs entering the hatcheryb) the health status of the breeding flockc) the destination and transport details for chicks leaving the hatcheryd) vaccinations givene) the number of chicks hatched each weekf) the percentage hatchg) culls and the reasons for cullingh) mortality and the causes, andi) the temperature and humidity settings in the setters and the hatchers. | |
|---|--|

Soil Association higher standard

| SA NI 3.16 Additional standards for organic deer | |
|---|--|
| <p>What is this chapter about?</p> <p>You must also comply with the applicable standards in:</p> <ul style="list-style-type: none"> • Chapter 1 'General standards for farming and growing' • Chapter 2 'Standards for organic land and crops' • Chapter 3 'Standards for organic livestock production' | |
| Standards | Guidance |
| <p>SA NI 3.16.1 Species and origins of stock (including parkland managed deer)</p> <p>1. You may only use:</p> <ol style="list-style-type: none"> red deer fallow deer. <p style="text-align: right;"><i>(EC) 2020/464 Annex I Part II</i></p> <p>2. Your stock must be domesticated.</p> | <p>You can use park deer if you can meet these standards.</p> <p>Domesticated means deer that are farm bred and reared for at least four generations.</p> |
| <p>3. You must not use:</p> <ol style="list-style-type: none"> wild deer other deer species. <p style="text-align: right;"><i>Soil Association higher standard</i></p> | |
| <p>SA NI 3.16.2 Producing organic deer</p> <p>1. To sell your deer as organic, the animals must be born and raised on an organic holding and managed to full organic standards throughout their lives. Additionally, their dams must be managed to full organic standards from mating.</p> <p style="text-align: right;"><i>Soil Association higher standard</i></p> <p>2. You must keep replacement deer to full organic standards from the time you bring them onto your organic holding.</p> <p style="text-align: right;"><i>Soil Association higher standard</i></p> <p>3. You must not sell any of your non-organic replacements as organic.</p> <p style="text-align: right;"><i>Soil Association higher standard</i></p> | <p>For general conversion requirements please refer to sections 3.1 'Converting your animals to organic' and section 3.2 'Sourcing livestock'.</p> |

| Standards | Guidance |
|---|---|
| <p>SA NI 3.16.3 Deer health and welfare You must make sure that:</p> <ul style="list-style-type: none"> a) all your staff have access to your up-to-date herd health plan b) your management of the farm guarantees the safety and welfare of your stock, stockmen and the general public, particularly during the rut and calving seasons, and c) you have provided facilities on your farm for the humane slaughter of both emergency and casualty animals. You must use a named, trained and competent member of staff, a person holding a licence to slaughter, or a veterinary surgeon. <p style="text-align: right;"><i>Soil Association higher standard</i></p> | |
| <p>SA NI 3.16.4 Prohibited husbandry practices You must not:</p> <ul style="list-style-type: none"> a) routinely remove hard antlers b) remove antlers in velvet c) use artificial insemination (AI) or embryo transfer d) castrate stock e) disbud stock, or f) use immobilon on deer intended for human consumption <p style="text-align: right;"><i>Soil Association higher standard</i></p> | <p>We will approve the removal of hard antlers only if you can demonstrate that it is necessary for reasons of stock and/or handler safety and welfare.</p> |
| <p>SA NI 3.16.5 Herd stocking density 1. You must not exceed the following stocking density: <div style="text-align: right;"><i>(EC) 2018/848 Art. 6</i> <i>(EC) 2020/464 Annex I Part II</i></div></p> | |

| Cervine animals species | Minimum surface for outdoor area per enclosure or per pen | Stocking density maximum number of adult animals (*)per ha |
|---|---|---|
| Sika deer Cervus nippon | 1 ha | 15 |
| Fallow deer Dama dama | 1 ha | 15 |
| Red deer Cervus elaphus | 2 ha | 7 |
| Père David's deer Elaphurus davidianus | 2 ha | 7 |
| More than one cervine species | 3 ha | 7 in case red deer or Père David's deer are part of the herd; 15 in case neither red deer nor Père David's deer are part of the herd |

* Two cervine animals up to 18 months count for one cervine animal.

2. You must:
- a) manage your deer as a herd
 - b) keep to a stocking density that:
 - i) is appropriate for herd behaviour
 - ii) allows effective parasite control, and
 - iii) does not exceed five hinds, plus followers, per hectare.
- Soil Association higher standard*

| Standards | Guidance |
|--|---|
| <p>SA NI 3.16.6 Shelter and fencing</p> <p>You must:</p> <ul style="list-style-type: none"> a) provide visual and weather protection facilities. by preference this should be natural and part of a wooded landscape. If this is not possible a roofed shelter should be provided. b) provide vegetation or structures that allow animals to rub off velvet from their antlers. c) provide vegetation that allow hinds/ does to hide prior to calving and two weeks after. d) construct fencing in such a way so that stock cannot escape. <p style="text-align: right;"><i>(EC) 2020/464/Art. 8 (1)(2)(3)(4)</i></p> | <p>Perimeter fencing should be at least 1.8 meters high</p> |

| | | | |
|--|--|----------|-------------|
| <div><div>e) make your tracks and gateways at least 3.5m wide to allow stock to move freely through them</div><div>f) use fencing that is visible to the stock to prevent injury</div><div>g) provide wallows</div></div> <div>Soil Association higher standard</div> | | | |
| <div>SA NI 3.16.7 Field and fencing management</div> <div>1. You must:<div><div>a) construct outdoor enclosures or pens in such a way that the different species of cervine animals can be separated if needed.</div><div>b) allow for outdoor enclosures or pens to be divisible or adjacent to another pen so that maintained can take place.</div></div><div>(EC) 2020/464 art. 7(2)(3)</div></div> | | | |
| <div>2. You must not:<div><div>a) have jump-in points</div><div>b) keep stags in adjacent fields during the rut.</div></div><div>Soil Association higher standard</div></div> | | | |
| <div>SA NI 3.16.8 Use of fields less than two hectares is restricted</div> <div>You must not use fields less than two hectares for grazing, except during collection or convalescence, unless we have agreed this as part of your livestock management plan.</div> <div>Soil Association higher standard</div> | | | |
| <div>SA NI 3.16.9 Feeding and water provision</div> <div>1. Your rearing system must be based on maximum use of grazing pasture throughout the year. Pens that do not provide grazing during the summer period are not allowed.</div> <div>2. Deer must be provided with easy access to clean and fresh water.</div> <div>(EC) 2018/848 Annex II Part II(1.9.2.1)(d)(f)(g)(h)</div> | For each deer, this means at least the following trough space: | | |
| | | Red deer | Fallow deer |
| | Hinds/yearlings | 55cm | 28cm |
| | Weaned calves | 33cm | 17cm |
| | Stags | 75cm | 38cm |

| | |
|--|---|
| <p>SA NI 3.16.10 Feeding calves milk and minimum weaning age Calves must be fed natural, organic milk, preferably maternal milk, for a minimum period of 90 days.</p> <p style="text-align: right;"><i>(EC) 2020/464 Art. 5</i></p> | <p>Maternal milk is milk from the mother; natural milk is from the glands of a mammal. Natural milk can come from other species provided that it meets the nutritional and health needs of the species you are feeding it to. Milk powder is considered as natural milk as long as it only contains milk powder.</p> <p>Milk containing vegetable oil and milk replacers is not considered as natural milk and therefore must be regarded as a concentrate for feed calculations during the minimum periods set out in this standard.</p> <p>You should have a plan in place to provide an organic source of colostrum. In an emergency you may feed non-organic milk replacer to calves until they are 72 hours old. However, if you feed them non-organic milk replacer for any longer they will lose their organic status.</p> |
| <p>SA NI 3.16.11 Housing and husbandry practises With regard to housing and husbandry practices, the following rules shall apply:</p> <ol style="list-style-type: none"> Deer shall be provided with hiding places, shelters and fences that do not harm animals; In red deer pens, animals must be able to roll in the mud to ensure skin grooming and body temperature regulation; any housing shall have smooth, but not slippery floors; any housing shall be provided with a comfortable, clean and dry laying or rest area of sufficient size, consisting of a solid construction which is not slatted. Ample dry bedding strewn with litter material shall be provided in the rest area. The litter shall comprise straw or other suitable natural material. The litter may be improved and enriched with any mineral product authorised in standard 2.5.2 as a fertiliser or soil conditioner for use in organic production; feeding places shall be installed in areas protected from the weather and accessible both to animals and to persons attending to them. The soil where feeding places are located shall be consolidated, and the feeding apparatus shall be equipped with a roof; | |

| <p>f. if permanent access to feed cannot be ensured, the feeding places shall be designed so that all animals can feed at the same time.</p> <p>(EC) 2018/848 Annex II Part II(1.9.2.2)</p> | |
|--|---|
| Standards | Guidance |
| <p>SA NI 3.16.12 Conditions for housing deer</p> <ol style="list-style-type: none"> 1. You may house: <ol style="list-style-type: none"> a) stock in severe weather conditions b) sick or injured stock c) calves during the winter period after weaning, and d) stock for the final finishing phase, for a maximum of two weeks prior to slaughter. 2. You may house adult deer through the winter if it is a benefit to their health and welfare 3. You must obtain approval from us before you house: <ol style="list-style-type: none"> a) mature stags b) finishing deer during the winter period. <p><i>Soil Association higher standard</i></p> | <p>If you need to house adult deer you will need to provide details in your livestock management plan for approval by the certification team.</p> |
| <p>SA NI 3.16.13 Housing requirements</p> <p>You must ensure that your deer housing provides:</p> <ol style="list-style-type: none"> a) housing for groups of similar ages b) at least five square metres lying area for each 100kg live weight c) safe environment to prevent injury to the deer d) adequate light, ventilation and no draughts e) facilities for rearing orphan calves, and f) refuge for bullied deer, using barriers or partitions with a minimum height of 2m. <p><i>Soil Association higher standard</i></p> | |
| <p>SA NI 3.16.14 Managing bullied deer</p> <p>You must remove bullied deer to a different pen, and if possible identify and remove the aggressor.</p> <p><i>Soil Association higher standard</i></p> | |

| Standards | Guidance |
|---|--|
| <p>SA NI 3.16.15 Holding pens, calving and darting You may:</p> <ol style="list-style-type: none"> use short-term holding pens, with at least 0.6m² for each 100kg of live weight assist with the calving of your hinds use darting when needed. <p><i>Soil Association higher standard</i></p> | |
| <p>SA NI 3.16.16 Handling races Barriers must be at least 2m high. The last 20m of the handling race must be solid boarding or close mesh (less than 6cm) and covered in hessian or a similar material.</p> <p><i>Soil Association higher standard</i></p> | |
| <p>SA NI 3.16.17 Transporting deer is restricted</p> <ol style="list-style-type: none"> You must not transport deer for more than eight hours, including the loading and unloading time. You must keep any transportation of your deer to an absolute minimum. If you do need to transport them you must use trained and competent people. <p><i>Soil Association higher standard</i></p> | <p>We may give permission to extend the eight hour journey time in exceptional circumstances.</p> |
| <p>SA NI 3.16.18 Managing deer welfare during transport</p> <ol style="list-style-type: none"> When transporting deer you (or the responsible person) must: <ol style="list-style-type: none"> allow the deer access to food at least four hours before the journey provide the deer with fresh, clean water directly before and after the journey allow any stressed deer to rest for up to one hour before loading or unloading them, and provide emergency facilities to cool down heat stressed deer. When transporting deer you must: <ol style="list-style-type: none"> individually pen any irritable or hard-antlered stags separate groups of deer based on their previous groups, size and sex | <p> Records of injuries and deaths during transport</p> |

| | |
|--|--|
| <ul style="list-style-type: none"> c) regularly inspect the deer d) ensure a stocking density of at least 0.6m² for each 100kg liveweight, and e) report any injuries or deaths to the driver, abattoir manager and farmer, and record them in the farm records. <p style="text-align: right;"><i>Soil Association higher standard</i></p> | |
| <p>SA NI 3.16.19 Vehicle design</p> <p>You must ensure that the vehicle has:</p> <ul style="list-style-type: none"> a) ramps with a slope of no more than 20 degrees b) appropriate ventilation c) sufficient bedding to prevent your deer slipping d) a ceiling height that allows the deer to stand normally e) pen divisions that are solid and at least 2m high, and f) no sharp edges or projecting parts that could cause injury. <p style="text-align: right;"><i>Soil Association higher standard</i></p> | |
| <p>SA NI 3.16.20 Lairage</p> <ol style="list-style-type: none"> 1. If you keep your deer in lairage during transit, you must make sure: <ul style="list-style-type: none"> a) there is enough space for the number of deer held b) there is enough shelter and bedded lying area for the number of deer held c) they have easy access to food and water d) the facilities are kept clean, and e) there are suitable handling, loading and unloading facilities. 2. Whilst the deer are in lairage you must: <ul style="list-style-type: none"> a) keep them in their social groups, and b) ensure they are inspected regularly, at least every eight hours, by a competent deer handler. <p style="text-align: right;"><i>Soil Association higher standard</i></p> | |
| <p>SA NI 3.16.21 Prohibited practices</p> <ol style="list-style-type: none"> 1. You must not: <ul style="list-style-type: none"> a) use goads b) transport the deer in the same vehicle as other species. 2. You must not transport any of the following to an abattoir: | |

| <ul style="list-style-type: none"> a) deer under five months old b) stags in hard antler, unless you individually pen them c) hinds more than five months in-calf d) sick, injured or diseased deer e) males over 24 months old during the rut f) hinds, with calves under three months old at foot. <p><i>Soil Association higher standard</i></p> | |
|--|----------|
| Standards | Guidance |
| <p>SA NI 3.16.22 Managing deer welfare at slaughter You must:</p> <ul style="list-style-type: none"> a) make sure you meet the terms of the Welfare of Animals at the Time of Killing 2015 and (EC) Regulation 1099/2009 (on the protection of animals at the time of killing) b) design and manage your slaughter system to make sure you do not cause your deer unnecessary distress or discomfort c) keep the pre-slaughter handling of the deer to a minimum d) only use thoroughly trained and competent people, and e) only slaughter your deer using the methods noted below. <p><i>Soil Association higher standard</i></p> | |
| <p>SA NI 3.16.23 Shooting deer in the field When you slaughter deer in the field you must:</p> <ul style="list-style-type: none"> a) use a suitable high velocity rifle and ammunition which meets the legal requirements of the Deer Act 1991 b) provide a safe backstop for the bullet c) take sensible precautions to ensure public safety, and d) if the kill is not clean, kill the wounded deer straight away, and only continue the cull when the remaining deer are calm. e) You must not shoot deer from greater than 40 metres, unless there are exceptional circumstances. <p><i>Soil Association higher standard</i></p> | |
| <p>SA NI 3.16.24 Captive bolt stunning You may use captive bolt stunning, using your own licensed farmed game handling and processing facility, provided that:</p> | |

| | |
|---|--|
| <ul style="list-style-type: none"> a) your deer are restrained in a drop floor crush, hydraulic crush or suitable pen b) the stun to stick interval is no more than 60 seconds, and c) after incision of the blood vessels, you perform no further dressing procedures on the deer for at least 20 seconds and until all brain stem reflexes have ceased. <p style="text-align: right;"><i>Soil Association higher standard</i></p> | |
| <p>SA NI 3.16.25 Rules on using abattoirs</p> <p>You may use a specialised licensed abattoir with staff who are trained and experienced with deer, provided that:</p> <ul style="list-style-type: none"> a) your deer are slaughtered as soon as possible on arrival, or are rested in a lairage designed for, and only being used by, deer b) your deer are not brought close to any other species in the lairage or abattoir before stunning c) walls, doors, passages and pens are smooth, without projections that could injure your deer, and are high enough to discourage them from escaping d) your deer are restrained in a drop floor crush, hydraulic crush or suitable pen e) the time that the last deer in a batch is left is kept to an absolute minimum f) the stun to stick interval is no more than 60 seconds, and g) after incision of the blood vessels, no further dressing procedures are performed on the deer for at least 20 seconds and until all brain stem reflexes have ceased. <p style="text-align: right;"><i>Soil Association higher standard</i></p> | |

| SA NI 3.17 Beekeeping What is this chapter about? Organic beekeeping aims to optimise the health of the bees and the integrity of their products through: <ul style="list-style-type: none"> • your hive management and the treatments you apply • the quality of the foraging area, and • the way you harvest, process and store the honey. You must also comply with the applicable standards in: <ul style="list-style-type: none"> • Chapter 1 'General standards for farming and growing' • Chapter 2 'Standards for organic land and crops' • Chapter 3 'Standards for organic livestock production' • Chapter 6 'Specific standards for food and drink' | |
|--|---|
| Standards | Guidance |
| SA NI 3.17.1 Producing organic bees and bee products You can sell bees and bee products as organic when you have kept them to full organic standards for at least 12 months. <i>(EC) 2018/848 Annex II Part II(1.2.2)(f)</i> | Bees and bee products must be added to your trading schedule before you can sell them as organic. |
| SA NI 3.17.2 Sourcing bees 1. When choosing your breed or strain, you must give preference to local ecotypes of <i>Apis mellifera</i> . 2. You must choose breeds giving preference to those with a high degree of genetic diversity, their breeding value, their longevity, and their resistance to health problems. You must ensure that breeds: <ol style="list-style-type: none"> a) are suitable to local conditions b) avoid the need for the mutilation of animals c) have vitality and resistance to disease. 3. Welfare must not be impaired by breed and strain selection. <i>(EC) 2018/848 Art. 14 (1)</i> <i>(EC) 2018/848 Annex II Part II 1.3(d)(1.3.2)(d)(1.3.3)(1.5.1.1)(1.9.6)</i> | |

| | |
|---|--|
| <p>SA NI 3.17.3 Establishing a new apiary You must establish your organic apiaries by bringing in colonies or swarms from organic units. <i>(EC) 2018/848 Annex II Part II(1.3.1)</i></p> | |
| <p>SA NI 3.17.4 Converting an existing apiary 1. You may convert your existing hives, but you must keep your bees to these standards for at least 12 months before you can sell any of their products as organic. 2. During the conversion period, the wax shall be replaced with wax coming from organic beekeeping.</p> <p>However, non-organic beeswax may be used:</p> <ul style="list-style-type: none"> a) where beeswax from organic beekeeping is not available on the market; b) where it is proven free of contamination with products or substances not authorised for use in organic production; and c) provided that it comes from the cap. <p><i>(EC) 2018/848 Annex II Part II(1.2.2)(f)</i></p> | |
| <p>SA NI 3.17.5 Increasing your stocks You must increase your stocks by dividing your own colonies or bringing in colonies or swarms from other organic units. <i>(EC) 2018/848 Annex II Part II(1.3.1)</i></p> | |
| <p>SA NI 3.17.6 Bringing in non-organic replacements 1. You may replace a maximum of 20% per year of your queen bees and swarms with non-organic queen bees and swarms. 2. You must place queen bees and swarms in hives with comb or foundation from organic production. 3. In any case, one swarm or queen bee may be replaced per year by a non-organic swarm or a queen bee <i>(EC) 2018/848 Annex II Part II (1.3.4.2)</i></p> | <p>You must demonstrate that suitable organic stock is not available.</p> |
| <p>SA NI 3.17.8 Preventing disease 1. You must be able to show that you take preventative measures to limit your bee health problems.</p> | <p>If health problems occur you must review your management, take appropriate action and monitor its effectiveness. This must be detailed in your livestock management plan.</p> |

| | |
|--|---|
| <p>2. Disease prevention must be based on:</p> <ol style="list-style-type: none"> breed and strain selection husbandry management practice high quality feed, and adequate and appropriate hives, maintained in hygienic conditions. <p>3. You must draw up a health plan to show how you will build health and reduce disease. This must be tailored to suit your own apiaries and should allow you to minimise your use of veterinary medicines.</p> <p style="text-align: right;"><i>(EC) 2018/848 Annex II Part II(1.5.1.1)</i> <i>(EC) 2018/848 Art. 39 1)(d)(ii)</i></p> | <p>Preventative measures include:</p> <ul style="list-style-type: none"> renewing the queens regularly regularly inspecting your hives to detect health problems disinfecting materials and equipment regularly destroying contaminated material regularly renewing beeswax, and leaving enough reserves of honey and pollen in your hives. |
| <p>SA NI 3.17.9 Treating disease</p> <ol style="list-style-type: none"> If your colonies become sick or infested you must treat them immediately, and, if necessary, place the colonies in isolation apiaries. Veterinary medicinal products may be used in organic beekeeping provided they are legally authorised for their intended use in the country of production. Chemically synthesised allopathic veterinary medicinal products, including antibiotics, may be used where necessary, under strict conditions and under the responsibility of a veterinarian, when the use of phytotherapeutic, homeopathic and other products is inappropriate. If you give veterinary treatment to you bees you must: <ol style="list-style-type: none"> clearly identify treated colonies by hive record the type of product and its active ingredient, together with details of the diagnosis, the dose, the method of administration, the duration of the treatment and the legal withdrawal period provide us with this information before the bee products are marketed as organic. <p><i>(EC) 2018/848 Annex II Part II(1.5.2.1)(1.5.2.2)(1.5.2.3)(1.9.6.3)</i></p> | <p>It is your responsibility to ensure that any treatments and veterinary products you use are licensed or have veterinary approval for their intended purpose.</p> <p> Records of veterinary treatments used</p> |

| | |
|---|---|
| <p>SA NI 3.17.10 Treated colonies If you treat any colonies with chemically synthesised allopathic veterinary treatments, except those we allow against Varroa mite, you must:</p> <ul style="list-style-type: none"> a) put them in isolation apiaries during the treatment period b) replace all the wax with organically produced wax, and c) put the treated colony into a 12 month conversion period, starting from the date of treatment. <p><i>(EC) 2018/848 Annex II Part II(1.9.6.3)(f)</i></p> | <p>You must have an effective system in place to ensure that treated bees or their products are not sold as organic during the 12 month conversion period. This needs to be detailed in your livestock management plan.</p> |
| <p>SA NI 3.17.11 Treatment of Varroa mite infestation If you have an infestation of <i>Varroa destructor</i>, you may:</p> <ul style="list-style-type: none"> a) destroy the male brood to contain the infestation b) use formic acid, lactic acid, acetic acid and oxalic acid c) use menthol, thymol, eucalyptol or camphor, and d) use veterinary treatments which are compulsory under national or community legislation. <p><i>(EC) 2018/848 Annex II Part II(1.9.6.3)(c)(e)</i></p> | |
| <p>SA NI 3.17.12 Welfare of bees You must not mutilate bees, for example, clipping the wings of the queen bee.</p> <p><i>(EC) 2018/848 Annex II Part II(1.9.6.4)(b)</i></p> | |
| <p>SA NI 3.17.13 Feeding bees</p> <ol style="list-style-type: none"> 1. You must leave your colonies with enough honey and pollen reserves to survive the winter. 2. You may only feed your bees when the survival of the colonies is endangered due to climatic conditions. 3. You may only feed them with organic honey, organic sugar or organic sugar syrup. 4. You must record the type of feed, dates, quantities and the hives that you artificially feed. <p><i>(EC) 2018/848 Annex II Part II(1.9.6.2)(a)(b)</i> <i>2018/848 Annex II Part II(1.9.6.6)</i></p> | <p>To prevent the risk of disease, feeding your bees with honey is not recommended except from your own disease-free colonies.</p> <p> Records of any supplementary feed given</p> |

| | |
|--|---|
| <p>SA NI 3.17.14 Exceptional rules for Beekeeping due to catastrophic circumstances</p> <ol style="list-style-type: none"> 1. With the approval of your competent authority, in the case of high mortality caused by health or catastrophic circumstances, you may renew or reconstitute your apiaries with non-organic bees when organic bees are not available. 2. With the approval of your competent authority, where the survival of the colony is endangered bee colonies may be moved to areas not respecting the provisions for the placing of the apiaries. 3. With the approval of your competent authority, where the survival of the colony is endangered for other reasons than climatic conditions, bee colonies may be fed with organic honey, organic sugar syrups, or organic sugar. 4. Upon approval by the competent authority you must keep documentary evidence of the use of this exception <p style="text-align: right;"> <i>(EC) 2018/848 Art 22</i> <i>(EC) 2020/2146 Art. 3(2)(6)(7)</i> <i>Soil Association higher standard</i> </p> | <p>Please refer to standard 1.6.4 for more detailed rules on catastrophic events.</p> <p>The certification team can submit a request to the competent authority on your behalf. This permission needs to be in place before any action takes place.</p> |
| <p style="text-align: center;">Why?</p> <p>These standards comply with European Commission organic regulation 2018/848, which has replaced regulations 834/2007 and 889/2008. The Soil Association has identified this standard as an area where the new regulation is less strict, therefore the requirement will be kept at the same level as the previous regulation and marked as a Soil Association higher standard. This standard will undergo a review process in 2023 to determine whether it should be brought into line with 2018/848, or should remain a higher standard.</p> | |
| <p>SA NI 3.17.15 Designated regions</p> <p>Your certification body, in line with any National Authority requirements, may have identified regions or areas where organic beekeeping is not practical. You must not site or manage your apiaries in these areas.</p> <p style="text-align: right;"><i>(EC) 2018/848 Annex II Part II(1.9.6.5)(i)</i></p> | |
| <p>SA NI 3.17.16 Siting your apiaries</p> <ol style="list-style-type: none"> 1. When you are siting your apiaries you must ensure: | <p>Low environmental impact methods are those that are part of a recognised scheme for:</p> |

| | |
|---|---|
| <p>a) Your bees have access to water and enough natural nectar, honeydew and pollen sources to sustain your colonies.</p> <p>b) Nectar and pollen sources within 3km of your apiary consist essentially of:</p> <ul style="list-style-type: none"> i) organic crops ii) uncultivated areas with natural vegetation, non-organically managed forests and iii) crops that have only been managed with low environmental impact methods and which cannot significantly affect the organic description of beekeeping. <p>c) Your bees are kept far enough from sources that may lead to the contamination of beekeeping products or to the poor health of bees. You must provide us with:</p> <ul style="list-style-type: none"> i) a map on an appropriate scale listing the location of hives, and ii) appropriate documentation and evidence, including suitable analyses if necessary, that the areas accessible to your colonies meet the conditions required in these standards. <p>2. If you have put your hives in areas where flowering is not taking place or if they are dormant, you do not need to meet the above conditions for siting apiaries for this time.</p> <p><i>(EC) 2018/848 Annex II Part II(1.9.6.5)(a)(b)(c)(1.9.6.6)</i></p> | <ul style="list-style-type: none"> • ways of using agricultural land which are compatible with the protection and improvement of the environment, the landscape and its features, natural resources, the soil and genetic diversity • an environmentally-favourable extensification of farming and management of low-intensity pasture systems • the conservation of high nature-value farmed environments which are under threat • the upkeep of the landscape and historical features on agricultural land • the use of environmental planning in farming practice. <p>Potential sources of contamination and poor health include urban centres, motorways, industrial areas, waste dumps, waste incinerators and areas of cropping where pesticides are used. For example, insecticides such as neonicotinoids can be a source of contamination and can also affect bee health.</p> |
| <p>SA NI 3.17.17 Hive management</p> <p>You must:</p> <ul style="list-style-type: none"> a) identify each of your hives individually b) inform us when you move your apiaries, within a timescale we have approved and agreed with you, and a) record all details of your hive management operations, such as: <ul style="list-style-type: none"> i) removing supers and extracting honey ii) moving hives iii) the amount and dates of the collection of honey. <p><i>(EC) 2018/848 Annex II Part II(1.9.6.6)</i></p> | |

| | |
|--|--|
| <p>SA NI 3.17.18 Hive materials Your hives must be made mainly of natural materials which give no risk of contaminating either the environment, the bee products or the bees themselves. <i>(EC) 2018/848 Annex II Part II(1.9.6.5)(d)</i></p> | |
| <p>SA NI 3.17.19 Hives and husbandry practices You may only use:</p> <ul style="list-style-type: none"> a) natural products in the hives, such as propolis, wax and plant oils b) physical cleaning treatments such as steam or direct flame c) rodenticides only in traps and appropriate products, listed in standard 2.6.3 to protect frames, hives and combs against pests, and d) appropriate substances listed in standard 1.12.2 for cleaning and disinfecting your beekeeping materials, buildings, utensils or products. <p><i>(EC) 2018/848 Annex II Part II(1.5.1.7)(1.9.6.3)(a)(b)(1.9.6.5)(f)</i></p> | |
| <p>SA NI 3.17.20 Sourcing wax</p> <ol style="list-style-type: none"> 1. You must use organic wax: <ul style="list-style-type: none"> a) for all your new foundations b) to replace combs during a hive's conversion period, and c) to set up a new hive or installation. 2. In the case of new installations or during the conversion period, if organic wax is not available, you may use non-organic wax from cappings where you can prove it is free from contamination. <p><i>(EC) 2018/848 Annex II Part II(1.2.2)(f)(1.9.6.5)(e)</i></p> | <p>You must demonstrate that organic wax is not available.</p> |
| <p>SA NI 3.17.21 Extraction</p> <ol style="list-style-type: none"> 1. You must make sure you adequately extract, process and store your bee products. 2. You must not: <ul style="list-style-type: none"> a) use chemical synthetic repellents during honey extraction operations b) destroy bees in the combs to harvest bee products, or | |

c) extract honey from combs that contain brood.
(EC) 2018/848 Annex II Part II(1.9.6.4)(a)(1.9.6.5)(g)(1.9.6.6)

Why?

These standards comply with European Commission organic regulation 2018/848, which has replaced regulations 834/2007 and 889/2008. The Soil Association has identified this standard as an area where the new regulation is less strict, therefore the requirement will be kept at the same level as the previous regulation and marked as a Soil Association higher standard. This standard will undergo a review process in 2023 to determine whether it should be brought into line with 2018/848, or should remain a higher standard.
