Introduction

The EU Organic Regulation standards put the principles of organic production into practice. These organic standards encompass EU Regulations 2018/848 and subsequent implementing and delegated acts (referenced throughout as the EU Organic Regulation). These regulations are the legal basis for the control of organic farming, food processing and organic labelling within the EU, and Northern Ireland.

Northern Ireland has remained in the EU single market and continues to follow EU rules on customs requirements and the regulation of agri-food products, including the EU organic Regulation. If you are in Northern Ireland, for the purpose of the EU organic regulation requirements, you need to apply these standards as if part of the EU. If you bring in products from EU member states you will not need importing on the scope of your organic license, however, if you bring products from the other parts of the UK or non-EU countries you will need to meet the importing requirements.

The Soil Association has higher organic standards than required by the EU Organic Regulation in key areas: delivering the highest levels of animal welfare, protecting human and animal health, safeguarding the environment and protecting the interests of organic consumers. These reflect our mission and vision as a charitable organisation.

Each standard has a reference which tells you which part of the EU Organic Regulation it refers to, or whether it is a Soil Association higher standard. Each Soil Association higher standard is accompanied by a ‘Why?’ box which explains the rationale behind the standard and why we expect our licensees to go further than required by the EU Organic Regulation.

Businesses across the world can become certified to the EU equivalent organic standards. A ‘competent authority’ is authorised by EU Member States to make rulings on organic legislation. In Northern Ireland the competent authority is NICA (Northern Ireland Competent Authority). The certification body that is appointed by the Soil Association to inspect and certify to Soil Association EU Equivalent Organic Standards in the UK is Soil Association Certification. Throughout these standards ‘your certification body’ refers to Soil Association Certification. For further definitions, please refer to the separate Glossary document on our website.

The EU Organic Regulation does not cover processing of non-food crops such as for textiles and cosmetic products and certification of inputs.

The Soil Association offers standards for areas not covered by the EU Organic Regulation. These include: textiles cosmetics

Please contact us if you would like more information or visit our website
Guide to using these standards

The standards are listed in the column on the left, with a white background for EU Organic Regulation standards and a blue background for Soil Association higher standards. Where necessary, guidance is provided in the column on the right, with a grey background to differentiate it from the standard.

Each standard is referenced with the relevant article/s of the EU Organic Regulation, or shows that it is a Soil Association higher standard.

Each Soil Association higher standard has a Why? box to explain its purpose and rationale.

This symbol shows where you need to keep a record to demonstrate that you are meeting the standard. The specific requirements for the records will be detailed in the standard or guidance.

This symbol shows where additional relevant information is provided.

What is guidance?

Guidance provides supplementary information to the standards which explains how compliance will be assessed. It tells you where and how to provide the information required, for example through record keeping or demonstration at your inspection. The guidance may also provide examples of actions and measures to help you demonstrate compliance, and links to best practice guides and information.

EXAMPLE Standards

NI 14.8.1 General record keeping

1. You must have a record keeping system in place which allows you to prove the organic status of your products. Your records need to cover all production stages from everything produced or bought in through to all goods sold or dispatched and must allow you to demonstrate the balance between input and output. They must also allow retrospective traceability.

2. You must keep stock and financial records at your unit or premises which make it possible to verify the following information for every product:

- Your records need to be able to carry out successful mass balance (input and output) and traceability exercises at your inspection. You will need to be able to demonstrate that you have bought/received/produced sufficient organic material for the quantity you have sold/delivered.

- You need to have a system to keep track of procedures and records to ensure they are correct, up-to-date and effective.

The relevant part of the EU Organic Regulation is referenced here.

The R symbol shows which records you need to keep to demonstrate that you meet this standard.

The I symbol shows where additional relevant information is provided.

EXAMPLE Guidance

Standards 14.3.1 to 14.3.3 apply to all licensees. More specific record keeping requirements for agricultural operations follow below.
### SA NI 14.1.1 Scope of the standards
These standards apply to packaging of products that you introduce into the supply chain.

We define packaging as all primary (retail), secondary (grouping, display) and tertiary (transport) materials used for: containing, protecting, preserving, handling, storage, delivery, labelling, marketing, and presentation of your products.

Note - we include bulk bins but not transport pallets in this definition.

### Why? 

The production, use and disposal of packaging can have a big impact on the environment and human health. Organic products should be packaged in ways that reduce the negative impacts of packaging. This fits with the principles of protecting the environment and biodiversity that underpin organic food and farming, and meets consumer expectations of organic products.

Packaging serves an important role in preventing food waste by protecting and extending the shelf life of products. It also helps to protect consumers by preventing contamination and substitution of organic products with non-organic alternatives. These packaging standards aim to maximise the benefits and avoid the negative impacts of packaging.

**Soil Association higher standards** are clearly shown.

**Why?** Each Soil Association higher standard has a Why? box to explain its purpose and rationale.
## SA NI 14.0 General standards for seaweed production

### SA NI 14.1 Scope

<table>
<thead>
<tr>
<th>Standards</th>
<th>Guidance</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>SA NI 14.1.1 Scope of the Standards</strong></td>
<td>Please contact us if you want to certify the production of multi-cellular marine algae or phytoplankton and micro-algae intended for feed for aquaculture animals so that we can inform you of which standards will apply.</td>
</tr>
</tbody>
</table>

This chapter details standards for the collection of wild seaweed and the farming of seaweed for food or feed products. They can be applied to the production of multi-cellular marine algae or phytoplankton and micro-algae intended for feed for aquaculture animals with the necessary modifications.

*(EC) 2018/848 Art. 2(1)(2)(3)(4)*

## SA NI 14.2 Objectives and principles of organic seaweed production

<table>
<thead>
<tr>
<th>Standards</th>
<th>Guidance</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>SA NI 14.2.1 General principles of organic production</strong></td>
<td></td>
</tr>
</tbody>
</table>

Your production system must meet the following principles and objectives:

1. To produce food of high quality and in sufficient quantity by the use of processes that do not harm the environment, human health, plant health or animal health and welfare.
2. To work within natural systems and cycles at all levels, from the soil to plants and animals and contribute to the protection of the environment and the climate.
3. To maintain the long-term fertility and biological activity of soils.
4. To treat livestock ethically, meeting their species-specific physiological and behavioural needs.
5. To respect regional, environmental, climatic and geographic differences and the appropriate practices that have evolved in response to them.
6. To maximise the use of renewable resources and recycling.
7. To design and manage organic systems which make the best use of natural resources and ecology to prevent the need for external inputs. Where this fails or where external inputs are...
required, the use of external inputs is limited to organic, natural or naturally-derived substances.

8. To limit the use of chemically synthesised inputs to situations where appropriate alternative management practices do not exist, or natural or organic inputs are not available, or where alternative inputs would contribute to unacceptable environmental impacts.

9. To exclude the use of soluble mineral fertilisers.

10. To foster biodiversity and protect sensitive habitats and landscape features, such as natural heritage sites.

11. To minimise pollution and waste, substantially contributing to a non-toxic environment.

12. To use preventative and precautionary measures and risk assessment when appropriate.

13. To exclude the use of GMOs and products produced from or by GMOs with the exception of veterinary medicinal products.

15. Encouraging the preservation of rare and native breeds in danger of extinction.

16. Contributing to the development and use of plant genetic material adapted to the specific needs and objectives of organic agriculture, including the use of organic heterogeneous material and varieties suitable for organic production.

17. Fostering the development of organic plant breeding activities in order to contribute to favourable economic perspectives of the organic sector.

18. Ensuring the integrity of organic production at all stages of the production, processing and distribution of food and feed.

19. The exclusion from the whole organic food chain of animal cloning, rearing artificially induced polyploid animals, and ionising radiation.

(EC) 2018/848 Art. 4
(EC) 2018/848 Art. 5
(EC) 2018/848 Annex II Part I(1.9.2)
(EC) 2018/848 Art. 24(5)
**Specific principles for aquaculture**

In addition to the overall organic principles set out in standard 14.2.1, organic aquaculture production must be based on the following specific principles:

1. The continuing health of the aquatic environment and the quality of surrounding aquatic and terrestrial ecosystems
2. The minimisation of the use of non-renewable resources and off-farm inputs
3. The recycling of wastes and by-products of plant and animal origin as inputs in plant and livestock production
4. Taking account of the local or regional ecological balance when taking production decisions
5. The use of seeds and animals with a high degree of genetic diversity, disease resistance and longevity
6. The maintenance of plant health by preventative measures, such as appropriate crop rotations, mechanical and physical methods and the protection of natural enemies of pests
7. Avoiding any endangerment of species of conservation interest that might arise from organic production.

*(EC) 2018/848 Art. 6*
### SA NI 14.3 Becoming Soil Association certified

<table>
<thead>
<tr>
<th>Standards</th>
<th>Guidance</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>SA NI 14.3.1 Certifying your business</strong>&lt;br&gt;To become certified to these organic standards you must have a certification contract with an independent, accredited certification body and comply with all relevant organic standards for your organic activity. <em>(EC) 2018/848 Art. 34(1)</em></td>
<td>Businesses across the world can become certified to standards that meet the EU Organic Regulation requirements. In NI, NICA is the competent authority, they have delegated some control tasks to accredited organic certification bodies. The certification body that is appointed by the Soil Association to inspect and certify to the standards in the UK is Soil Association Certification. Additionally, Soil Association Certification is accredited by IOAS (International Organic Accreditation Service) and authorised to offer organic certification in specific countries outside the EU for certain types of products. Please contact Soil Association Certification for more details.</td>
</tr>
<tr>
<td><strong>SA NI 14.3.2 Activities that require certification</strong>&lt;br&gt;1. In the EU all stages of the organic supply chain must hold organic certification.&lt;br&gt;2. Your business must be certified if you produce, process, package, store, label, import, export, or distribute organic products. This includes wholesale, storage and warehousing, acting as the first consignee for imported products and any other activities that require the physical or financial ownership of organic or in-conversion products or ingredients.&lt;br&gt;3. You do not need certification if you only sell organic products directly to the final consumer or user provided that you do not produce, prepare, store organic products other than in relation to the point of sale or import such or have not contracted out such activities. In other countries certification may be required for these activities. <em>(EC) 2018/848 Art. 34(1)(2)(3)</em></td>
<td>Without adequate certification at each stage of the supply chain, the products may lose their organic status. Examples of businesses not requiring certification in the UK include supermarkets and mass caterers serving food e.g. restaurants, cafes, catering companies. If you are unsure whether the activity you are carrying out requires certification please contact us. For more information on the certification requirements for importing and exporting please refer to standard section 6.8 in the food and drink standards.</td>
</tr>
<tr>
<td><strong>SA NI 14.3.3 Organic certificate</strong>&lt;br&gt;1. You are not allowed to sell products with reference to organic or in-conversion without a valid certificate that shows that your activity complies with these organic standards.</td>
<td>Soil Association Certification will issue licensees with the following documentation:&lt;br&gt;- An annual certificate with valid from and to dates, your name, address and licence number&lt;br&gt;- A Trading Schedule with your certified products, activities and status</td>
</tr>
</tbody>
</table>
2. Certificates are issued once Soil Association Certification has inspected your organic activity and they are satisfied that your activity meets organic standards. The certificate will list all your certified activities and the crops, livestock and/or products you are certified to produce, process and/or sell as organic.

3. The certificate may be in electronic format.

4. You are not entitled to obtain a certificate from more than one control body for the same category of products in the same country. This includes at different stages of production, preparation and distribution. 

   (EC) 2018/848 Art. 35(1)(2)(4); Art. 39

- For producers, an Information Schedule listing your licensed enterprises, holdings and fields.

Annual renewal of your licence is linked to you continuing to meet the relevant standards and payment of the relevant renewal fee. Within a year of your original application date we will send you a renewal invoice.

The categories are as follows (2018/848 Article 35.7)

a) unprocessed plants and plant products, including seeds and other plant reproductive material;

b) livestock and unprocessed livestock products;

c) algae and unprocessed aquaculture products;

d) processed agricultural products, including aquaculture products, for use as food;

e) feed;

f) wine;

g) other products listed in Annex I to this Regulation or not covered by the previous categories.

Examples:

An egg producer who also packs eggs, or a grower who also packs the produce could not have certification with 2 different certification bodies. This because both the production and the packing would be classed as category A products (unprocessed).

Soil Association Certification

Since 1973 Soil Association Certification Limited (Soil Association Certification) has certified farm enterprises, foods and other products as organic. Soil Association Certification is a wholly owned subsidiary of the Soil Association charity. We are registered with NICA to certify organic food production and processing under the terms of EU Organic Regulation No. 2018/848.

Certification bodies must be able to prove that they have the expertise, equipment, infrastructure and sufficient number of suitable qualified and experienced staff to carry out the task of certification. Soil Association Certification Limited is accredited and subject to an annual inspection by the United Kingdom Accreditation Service (UKAS) for UK licensees and IOAS for non-EU licensees.
To uphold organic integrity and in order to work efficiently, certification bodies are obliged to communicate and exchange relevant certification information about their licensees to control authorities and other certification bodies. This includes when:

- a) licensees change certification bodies
- b) non-compliances are found
- c) organic status of a product is lost, and certification is withdrawn.

**Information**

If you are interested in certifying your business, contact Soil Association Certification via:

**Email:** GoOrganic@soilassociation.org

**Phone:** 0117 914 2406

**Post:** Spear House, 51 Victoria Street, Bristol, BS1 6AD

---

**SA NI 14.4 Your obligations when certified**

<table>
<thead>
<tr>
<th>Standards</th>
<th>Guidance</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>SA NI 14.4.1 Description of your activities</strong></td>
<td>Some of this information will be collected as part of the application process.</td>
</tr>
</tbody>
</table>

1. Before starting your organic enterprise, you must describe how you will comply with these organic standards and the relevant practical measures to be taken to ensure compliance with this Regulation. If you make any changes to your activity you must update your certification body accordingly.

2. You must include a full description of your premises, units and activities including:
   - a) a full description of the installations on land and at sea
   - b) facilities used for the receipt of goods, processing, packaging, labelling and storage of seaweed
   - c) procedures used for transporting seaweed
   - d) the environmental assessment as outlined in standard 14.7.1
   - e) the sustainable management plan as outlined in standard 14.7.2
   - f) for wild seaweed a full description and a map of shore and sea collection areas and land areas where post collection activities take place.

You must let us know if and when you plan to expand into new areas. For example, if you currently store organic products and wish to start packing or processing them, if you want to start importing products. Depending on what you're adding or expanding, we will need to update your certificates and you may need an additional inspection or licence.
### SA NI 14.4.2 Sub-contracted operations

If you sub-contract out your organic activity, in part or whole, to a third party, they must hold their own organic certification, unless you remain responsible for that organic production and have not transferred that responsibility to the subcontractor, in which case those activities may be covered under the scope of your organic license. The information in 14.4.1 must also include:

- a) a list of the subcontractors, including their activities and the certification body or authority that they are certified by
- b) a written agreement by the subcontractors that their operation will comply with the control measures required as part of organic certification, and
- c) details of all the practical measures taken to ensure and demonstrate full traceability of products.

### SA NI 14.4.3 Declaration

You must sign a declaration stating that you:

- a) have described your organic enterprise and activities as referred to in 14.4.1 accurately
- b) will perform your operations according to organic rules
- c) accept any enforcements in case of non-compliance
- d) inform the buyers of loss of status of your product
- e) accept exchange of information about your operation between different certification bodies or control authorities in the event that subcontractors are subject to controls by different control authorities or control bodies
- f) accept handing over information about your certification history when changing certification body or control authority
- g) will inform your buyer and certification body or control authority immediately in the event that...
suspicions of non-compliance has been substantiated, that a suspicion of non-compliance cannot be eliminated, or that non-compliance that affects the integrity of the products in question has been established.

h) in the case of withdrawing certification inform the certification body or control authority without delay

i) accept that your Certification Body or control authority retains your certification history for a minimum of 5 years,

j) must inform the certification body of any changes to your activities.

(EC) 2018/848 Art.39(1)(d)(iii)

**SA NI 14.4.4 Other obligations and statutory requirements**

You must make sure your organic business and operations comply with all statutory regulations in your country, and you must make all declarations and other communications that are necessary for official controls.

(EC) 2018/848 Art.2(4)(5)  
(EC) 2018/848 Art. 37 (EC) 2018/848  
(EC) 2018/848 Art. 39(1)(b)

This includes but is not limited to requirements concerning:

- premises
- equipment
- staff facilities
- general hygiene
- protection of food from contamination or deterioration
- animal welfare
- water
- transport
- labour and workers
- wildlife conservation and protection.

Official controls as required in Regulation (EU) 2017/625, which includes:

- food and feed law
- rules on animal health and welfare
- plant health
- plant protection products.

**SA NI 14.4.5 Employment**

You must **not** use forced or involuntary labour or child labour that interferes with their education.

*Soil Association higher standard*

Note that this standard is also a requirement of several EU Directives including 94/33/EC Protection of Young People at Work, and 2011/36 Preventing and combating trafficking in human beings and protecting its victims. If you are outside the EU, it may be a requirement of the International Labour Organisation Conventions that have been ratified in your country. If it is not you must still meet this requirement.
Labour management tools, such as Sedex, can be a useful way of helping to ensure that you meet this standard and identify, mitigate and manage risks in your supply chain.

<table>
<thead>
<tr>
<th>Why?</th>
</tr>
</thead>
<tbody>
<tr>
<td>Organic food which has been produced in a way that compromises the basic rights of people is counter to the principles and expectations of the organic movement and organic consumers.</td>
</tr>
</tbody>
</table>

**SA NI 14.4.6 Certification code**

1. Each certification body is issued with a unique certifier code.
2. You must use this code if you are packing and labelling products yourself or if another Soil Association certified business in the UK is packing or labelling the product on your behalf.

*(EC) 2018/848 Art. 32(5)*
*(EC) 2021/279 Art. 3*

- Please refer to the labelling section 14.9 for more information on labelling requirements.
- In the UK (including Northern Ireland), products produced or processed in the UK (including Northern Ireland), the Soil Association certifier code is GB-OR-05.

**SA NI 14.4.7 Transitional measures for stock of products produced in accordance with Regulation (EC) 834/2007**

Products produced in accordance with Regulation (EC) No 834/2007 before 1 January 2022 may be placed on the market after that date until stocks are exhausted.

*(EC) 2018/848 Art. 60*

<tr>
<td><strong>SA NI 14.5 Inspections</strong></td>
<td></td>
</tr>
<tr>
<td><strong>Standards</strong></td>
<td><strong>Guidance</strong></td>
</tr>
<tr>
<td><strong>SA NI 14.5.1 Inspection visits</strong></td>
<td>- you wish to add a new enterprise to your licence</td>
</tr>
<tr>
<td>1. A physical inspection of your organic certified activities must be carried out once per year. You may be subject to additional announced or unannounced inspections based on an assessment of risk.</td>
<td>- you move to new premises</td>
</tr>
<tr>
<td>a. Where no non-compliances affecting organic integrity have been raised in the last three years and no additional areas of risk have been raised by us you may have a reduced frequency of inspection. The period between two physical on-the-spot inspections shall not exceed 24 months.</td>
<td>- we receive a complaint regarding your business</td>
</tr>
<tr>
<td>b. Where a physical inspection does not take place an annual verification of compliance is still required where information and documentation will be requested.</td>
<td>- it is necessary to inspect seasonal activity or at different times of year</td>
</tr>
<tr>
<td>2. You may also be inspected by your competent authority as part of their surveillance of our inspection procedures.</td>
<td>- we need to inspect again to make sure you have corrected non-compliances</td>
</tr>
<tr>
<td></td>
<td>- you are selected as part of our additional inspection programme and/or our risk assessment of your operations suggests the need for this.</td>
</tr>
<tr>
<td></td>
<td>We may charge you for these additional inspections if we consider they are needed because of non-compliances.</td>
</tr>
<tr>
<td><strong>SA NI 14.5.2 What happens at the inspection</strong></td>
<td>At least 10% of a certification body’s inspections must be unannounced and 10% must be risk-based extra inspections. These are based on the general evaluation of the risk of non-compliance with the organic production rules, taking into account at least the results of previous controls, the quantity of products concerned and the risk for exchange of products.</td>
</tr>
<tr>
<td>1. At your inspection Soil Association Certification will:</td>
<td>As part of closing meeting your Inspector will explain any non-compliances found during your inspection and will ask you to sign a Declaration and explain the need to complete an Action Summary Form (usually left with you at the end of inspection) which lists the outcomes of the inspection. This includes any areas that do not comply with the standards and asks how you will correct them. It may also ask for extra information to complete the approval process.</td>
</tr>
<tr>
<td>a) verify that the description of your activities provided in your declaration is accurate</td>
<td>You must respond with details of the actions you will take to address non-compliances and supply any other information requested before the deadline given. When we have received your returned form and agreed the information you have given is satisfactory, we will approve your corrective actions and issue/reissue your certificate.</td>
</tr>
<tr>
<td>b) verify whether your activities are compliant with organic standards, and</td>
<td></td>
</tr>
<tr>
<td>c) compile an inspection report with any possible deficiencies and non-compliances found.</td>
<td></td>
</tr>
<tr>
<td>2. You or an appointed representative must sign the inspection declaration stating that you agree with the outcomes of the inspection and to undertake necessary corrective actions.</td>
<td></td>
</tr>
</tbody>
</table>

*(EC) 2018/848 Art.38(2)(3)*

*(EC) 2018/848 Art.38(6)*

*(EC) 2018/848 Art. 39(1)(b)(d)*
### SA NI 14.5.3 Access to facilities
You must give Soil Association Certification or your control authority:

- **a)** access to all parts of your unit and all premises, including any non-organic production units and any storage premises for input products which it deems necessary in order to certify your organic activities
- **b)** access to accounts and relevant supporting documents which it deems necessary in order to certify your organic activities
- **c)** any information reasonably necessary for the purposes of certifying your organic activities, and
- **d)** when requested, the results of your own quality assurance programmes.

\[\text{(EC) 2018/848 Art.38(1)(b)(c)}\]
\[\text{(EC) 2017/625 Art.15(1)(2)}\]

### SA NI 14.5.4 Sampling
You must allow Soil Association Certification to take samples which will be analysed for the presence of prohibited substances and checking compliance to organic standards.

\[\text{(EC) 2018/848 Art.38(4)(c)}\]
\[\text{(EC) 2021/279 Art. 7(c)}\]

We will take samples if there is a risk that organic standards have not been complied with or to verify that sufficient measures are in place to prevent contamination of organic products. Certification bodies are obliged to take samples from the equivalent of 5% of their licensees per year.

### SA NI 14.5.5 Specific requirements for inspecting bivalve mollusc production
You must inform your certification body when maximum bivalve biomass production occurs so that inspection visits can take place before or during this period.

\[\text{(EC) 2018/848 Art.9(8)(9)}\]
### SA NI 14.6 Non-compliance with the standards

#### Standards

**SA NI 14.6.1 Non-compliances**

1. Where you are found not to comply with organic standards Soil Association Certification will issue you with a non-compliance. The level of sanction will be proportionate to the severity and extent of the non-compliance and the risk it poses to the integrity of the organic product. Soil Association Certification will always apply the precautionary principle when making decisions on compliance to organic standards.

2. Depending on the severity of the non-compliance Soil Association Certification may suspend or even withdraw your licence. If your licence is suspended or withdrawn you must not trade as organic.

#### Guidance

After your inspection we will draw up an Action Summary Form and Declaration (either at inspection or we will send it to you afterwards). This lists areas that do not comply with the standards and asks how you will correct them.

The different grades of sanctions are as follows:
- minor non-compliance
- major non-compliance
- critical non-compliance, or
- manifest infringement.

You are required to complete the Action Summary Form and Declaration with the actions you will take to comply with the standards, and return it to us with any other information we request before the deadline given. When the Certification Team has received your completed form and agreed that the information you have given is satisfactory they will approve the Action Summary Form and Declaration and renew your licence.

We may suspend or withdraw your licence in the following cases:
- if you are in breach of your contract with us
- if you do not pay your fee within the deadlines
- failure of licensee to return certified sales declaration (CSD)
- we are unable to arrange an inspection
- an inspector is refused access to premises
- an inspector is refused permission to take a sample
- if you do not send the completed Action Summary Form and Declaration, or the information we request, within the deadlines
- severe or repeated non-compliance resulting in loss of organic integrity of an operation, product or batch
- a fraudulent activity is reported by an authority.

The classification of the non-compliances into three categories: minor, major and critical, taking into account at least the following criteria:

- (EC) 2018/848 Art. 37
- (EC) 2018/848 Art. 38(1)
- (EC) 2018/848 Art. 41(3)(4)
- (EC) 2018/848 Art. 42
- (EC) 2021/279 Art. 8
- (EC) 2021/279 Annex I
SA NI 14.6.2 Reporting non-compliances

If you suspect that a product you have produced, prepared, imported or received from another operator does not meet organic standards you must:

(a) identify and separate the product concerned
(b) check whether the suspicion can be substantiated
(c) not place the product on the market as organic or in-conversion and not use it in organic production, unless the suspicion can be eliminated
(d) where the suspicion has been substantiated or where it cannot be eliminated, immediately inform us and provide us with available information, where appropriate
(e) fully cooperate with us in verifying and identifying the reasons for the suspected non-compliance.

Suspicion can originate from a number of sources including (but not exclusively):

- a positive residue detection showing contamination with a substance not permitted in organic production (please see standard 5.6.3)
- a complaint from a reliable source
- you have not been able to verify the organic status of goods you have received (see section 5.7 for further information)
- not being able to verify valid certification of a product or supplier. For example, if your supplier’s certification has been revoked
- knowing that an element of the production did not meet organic standards, for example a prohibited substance has accidentally been applied to your crop or a non-organic ingredient has been used by mistake.

You must stop any further sale/use of the product as organic (or in-conversion if applicable) until any doubt over its organic status can be eliminated.

You must inform the certification team if you have substantiated suspicion or where you have not been able to eliminate suspicion that the product may not meet organic standards and stop any further sale of the product as organic until any doubt over its organic status can be eliminated.

An investigation will be carried out to determine if the product has met organic production rules. Once this has been determined you will be informed if the product can be put back on the market as organic or not.

If the suspicion is confirmed, then you must remove any reference to organic from the product. If the suspicion is not confirmed, then you no longer have to withhold the product from sale.

If you are unsure what action to take, please contact the technical team at sacl.notifications@soilassociation.org.

(EC) 2018/848 Art. 27; Art. 41 (1)(2)
SA NI 14.6.3 Actions to be taken in the case of suspicion of the presence of non-permitted products or substances

1. If you suspect that a product does not meet these organic standards due to the presence of a substance not authorised for use in organic production, you must:
   a) identify and separate the product concerned
   b) check whether the suspicion can be substantiated
   c) not market the product as organic or in-conversion
   d) not use the product in organic production
   e) fully cooperate with Soil Association Certification in identifying and verifying the reasons for the positive residue detection.

2. To check whether the suspicion of a positive residue detection can be substantiated you must take account of the following elements:
   a) where the suspicion concerns an incoming organic or in-conversion product check that the information provided on the label of the product matches the information on the accompanying documents and that the information on the organic certificate provided by the supplier relates to the product purchased
   b) where there is suspicion that the cause is under the control of your business you must examine any possible cause for the positive residue detection.

3. Where the suspicion has been substantiated or where it cannot be eliminated you must immediately inform Soil Association Certification and provide:
   a) information and documents relating to the supplier (delivery note, invoice, the supplier’s organic certification and the Certificate of Inspection (COI) if relevant)

The non-permitted products and substances referred to in this standard can include any product or substance not permitted in these organic standards. Such products and substances not authorised for use in organic production and processing can include but are not limited to:
- active substances used in plant protection products
- pest control products for use in agriculture and storage facilities
- fertilisers soil conditioners and nutrients
- non-organic feed material of plant, algal, animal or yeast origin or as feed material of microbial or mineral origin
- feed additives and processing aids
- food additives and processing aids
- cleaning and disinfection products
- non-organic ingredients not authorised for use in organic products
- processing aids for yeasts and yeast products.

The presence of non-permitted products or substances also includes and may be referred to as residue detections. Suspect contamination must be followed by the procedure outlined in this standard.

If you are unsure what action to take, please contact the technical team at sacl.notifications@soilassociation.org.
b) information relating to the traceability of the product (lot identification or batch number, stock quantity and the quantity of the product already sold)  
c) the laboratory results, from an accredited laboratory when relevant and available  
d) the sampling sheet detailing the time, place and method used to take the sample  
e) any information regarding a previous suspicion or substantiated residue detection for the specific product or substance  
f) any other relevant documentation that will help clarify the case.

4. If your product has a positive residue detection for a substance not authorised for use in organic production Soil Association Certification will carry out an investigation to determine:  
a) if products or substances not authorised in organic production have been used  
b) if sufficient precautionary measures have been taken  
c) if sufficient measures following previous requests from certification body have not been taken.

You will be given the opportunity to comment on the investigation and you may be required to take corrective measure to avoid future contamination.

(EC) 2018/848 Art. 28 (2); Art. 29 (1)(2)(3)(4); (EC) 2021/279 Art. 1 (1)(2)

**SA NI 14.6.4 Exceptions**

Exceptions to certain productions rules will only be allowed when explicitly referenced in these standards. Permission must may be granted or confirmed by your certification body or competent authority.

(EC) 2018/848 Art. 22  
(EC) 2018/848 Art. 39(1)
### SA NI 14.6.5 Appeals and complaints

We appreciate there may be occasions when you wish to make a formal complaint to us. This could be regarding service, standards, policy, another licensee or an unlicensed company. We have formal complaints and appeals procedures which are available on request. You can make a complaint in writing, by email or by telephone.

If you have a complaint please send details in writing to cert.complaints@soilassociation.org or telephone Client Services on 0117 987 4564.

If you wish to appeal a certification decision please send full details to the Certification Team.
### SA NI 14.7 Planning and managing your organic system

<table>
<thead>
<tr>
<th>Standards</th>
<th>Guidance</th>
</tr>
</thead>
</table>
| **SA NI 14.7.1 Environmental assessment**<br>If your site produces more than 20 tonnes of organic aquaculture product per year including seaweed, you must draw up an environmental assessment appropriate to the production unit. The assessment must be based on Annex IV to Directive 2011/92/EU which is the Environmental Impact Assessment Directive. It requires you to consider the conditions of the site, its current and future likely effects on the immediate environment. If the unit has already been subject to an equivalent assessment then it can be used for this purpose.<br>(EC) 2018/848 Annex II Part III(1.3)<br>Measure whether your site produces more than 20 tonnes of aquaculture product on a fresh weight basis.<br>Council Directive 2011/92/EU can be accessed online [here](#). Details of the environmental impact assessment should include descriptions of:<br>• the production unit, including physical characteristics, construction, production processes, inputs and the period when the unit will be in use<br>• the aspects of the environment that the production unit will affect, such as aquatic flora and fauna, air, climatic factors, material assets including architectural and archaeological heritage, landscape and the interrelationship between these factors the pollutants emitted by the unit including the elimination of waste measures adopted to prevent, reduce and where possible offset significant adverse effects on the environment.<br>**SA NI 14.7.2 Sustainable management**<br>You must provide us with a sustainable management plan drawn up in verifiable coordination with neighbouring operators for aquaculture. The plan must be proportionate to the production unit and include:<br> a) The environmental effects of the operation<br> b) Details of environmental monitoring<br> c) Measures to minimise negative impacts on the surrounding aquatic and terrestrial environment<br> d) Where applicable, details of nutrient discharge into the environment per production cycle or per annum<br> e) Details of how technical equipment will be surveyed and repaired where necessary<br> f) A waste reduction schedule to be put in place at the start of organic production<br> g) Defensive and preventative measures taken against predators (in line with national rules and the [Habitats Directive 92/43/EEC](#)).<br>If you produce bivalve molluscs your plan must include a summary of the survey and report required in aquaculture standard 13.13.9.<br>At inspection we will check this is appropriate to your system. Ensure you review and update your plan annually and include details of neighbouring operations.<br>Your plan needs to cover:<br>• Energy and water use; impact on wild species, for example seals and Eider ducks, which are a species of conservation interest<br>• Risks identified through environmental monitoring and how these will be managed<br>• How mortalities will be managed; identification and recapture of escapees; measures to minimise waste feed<br>• The impact of any nutrient and effluent build up on the surrounding aquatic environment and how this is managed. Consider important habitats such as calcified seaweed (maerl) beds<br>• Procedures to log and maintain all technical equipment<br>• How site waste is managed to avoid environmental damage, protect animal health and avoid attracting pests. For example using nets and ropes made of durable material that is suitable for re-use<br>• Identification of potential predators e.g. seals, birds, biofouling organisms, and the steps you take to prevent and deter them in line with national rules and the [Habitats Directive](#).
### SA NI 14.7.3 Renewable energy and recycling

You must preferably use renewable energy sources and recycled materials. Where possible, the use of residual heat should be limited to energy from renewable sources.

**Record any measures you have in place.**

### SA NI 14.8 Record keeping

#### Standards

**SA NI 14.8.1 General record keeping**

1. You must have a record keeping system in place which allows you to prove the organic status of your products. Your records need to cover all production stages from everything produced or bought in through to all goods sold or dispatched and must allow you to demonstrate the balance between input and output. They must also allow retrospective traceability.

2. You must keep stock and financial records at your unit or premises which make it possible to verify the following information for every product:
   - a) the suppliers, sellers or exporters
   - b) the nature and quantities of organic products delivered, including where relevant:
     - i) nature and quantities of all materials bought and the use of such materials
     - ii) the composition of compound feed stuffs
   - c) the nature and quantities of organic products held in storage
   - d) the nature, quantities, and consignees or buyers (other than final consumers) of any products which have left your unit, premises or storage facility.

3. If you do not store or physically handle organic products, you will still need to keep records of:

#### Guidance

Standards 14.8.1 to 14.8.3 apply to all licensees. More specific record keeping requirements for seaweed operations follow below.

Your records need to be sufficient for us to be able to carry out successful mass balance (input and output) and traceability exercises at your inspection. You will need to be able to demonstrate that you have bought/received/produced sufficient organic material for the quantity you have sold/dispatched.

You need to have a system to keep track of procedures and records to ensure they are correct, up-to-date and effective.

Your records need to include:
- checked organic status of goods delivered as per standard 15.3.3
- quantities, batch codes and invoices and delivery notes of goods received
- quantities and batch codes of ingredients used in production/packing
- quantities produced in each production/packing run
- evidence that you processed organic and non-organic products separately
- evidence that you cleaned according to these standards before production
- batch codes of goods out
- what you have sold/dispatched, how much and to whom
- the organic products sale value
- annual stock takes
- any pest control treatments used
<table>
<thead>
<tr>
<th><strong>SA NI 14.8.2 Verifying certification documents</strong></th>
<th><strong>SA NI 14.8.3 Complaints register</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>1. You must verify the certification documents of your suppliers and check that they:</td>
<td>You must keep a complaint register for your business. This must record:</td>
</tr>
<tr>
<td>a) identify your supplier,</td>
<td>A complaints record encourages transparency. It allows businesses to monitor issues arising and encourages good practice by ensuring there is a documented system for dealing with complaints.</td>
</tr>
<tr>
<td>b) cover the type or range of products you are purchasing, and</td>
<td></td>
</tr>
<tr>
<td>c) are valid at the time you are making the purchase.</td>
<td></td>
</tr>
<tr>
<td>2. You must make a record of these checks.</td>
<td>A certification document will be the organic certificate, or in the case of SA Certification licensees this includes the certificate and trading schedule, The name and address on the certificate must match the name and address of your supplier (the company you are purchasing from).</td>
</tr>
<tr>
<td><strong>(EC) 2018/848 Art. 35(6)</strong></td>
<td>When you receive goods, you will also need to make the checks detailed in standard 15.3.3.</td>
</tr>
</tbody>
</table>

- Certificates of Inspection (COIs) if applicable.

You do not have to record sales value if you do not sell the product, for example, if you store product on behalf of another licensed organic company and do not sell that product to anyone.

You need to carry out at least annual stock takes and record these (however, if you are handling a large volume of goods it may be beneficial to you to do this more frequently). These are necessary for our Inspector to have a starting point to conduct a mass balance.

It is up to you to choose a traceability code system that works for you and your products. Some companies will use a batch code system, whereas others may be able to use the best before date on a product. Please see the record keeping standards below for more information about the importance of traceability in organic systems.

You need to keep all records for at least shelf-life plus 12 months. With the exception of Certificates of Inspection which must be kept for 2 years. Please refer to the importing standards in section 6.8 of the food and drink standards for further information.

Also, make sure that your records comply with any other legally required time scales that might be specific to your products.

A certification document will be the organic certificate, or in the case of SA Certification licensees this includes the certificate and trading schedule, The name and address on the certificate must match the name and address of your supplier (the company you are purchasing from).

When you receive goods, you will also need to make the checks detailed in standard 15.3.3.

(EC) 2018/848 Art. 2(4)(5); Art 39(1)(a)

**SA NI 14.8.4 Specific seaweed production records**

1. You must keep records in the form of a register which is available at all times on the premises of your holding. These records must provide the following information:
   a) list of species, date and quantity harvested
   b) date of application, type and amount of fertiliser used

2. If you collect wild seaweeds the register must also contain:
   a) the history of harvesting activity for each species in named beds
   b) harvest estimate (volumes) per season
   c) sources of possible pollution for harvest beds
   d) sustainable annual yield for each bed

(EC) 2018/848 Art. 39(1)(a)
(EC) 2018/848 Annex II Part III
(EC) 2021/1691 Art 34(8)
(EC) 2021/1691 Annex I.3(c)

Plant production records
## SA NI 14.9 General labelling

### Standards

**SA NI 14.9.1 Using the term organic**

If you wish to refer to organic in relation to an agricultural food or feed product anywhere on a label, in advertising materials or commercial documents, you must meet the requirements of these standards.

Terms and their derivatives listed in Annex IV, whether alone or in combination (including terms used in the EU to describe organic products – see guidance), may be used throughout the European Union and in any language listed. 

\[ (EC) 2018/848 \text{ Art. 2} \]

\[ (EC) 2018/848 \text{ Art. 30(1)} \]

**Labelling refers to the way in which you identify your products and show their organic status. The labelling standards apply to:**

- retail packaging
- bulk packaging
- the labelling of loose produce for sale in retail outlets
- information on delivery notes or invoices for products that are transported in bulk, such as milk
- marketing materials
- web content.

This includes reference to organic not just in the product name or sales description, but also in relation to ingredients of a food or feed product. For example, a cereal bar making organic claims about some of the ingredients may only do so if the cereal bar is certified to the organic regulation.

This only applies to food and feed products. However, if you make such claims on non-food and feed products, (such as textiles, health and beauty products, pet food), your claims must still be true. In the UK all products are governed by the *Trade Descriptions Act*.

Examples of other references to organic include, “organically grown”; “organically produced”; "grown/produced using organic principles"; "grown/produced using organic methods".

If you sell organic products and non-organic products, any use of the word organic, or organic logos (certifier logos such as the SA Symbol, or the EU Organic logo), must be clear and unambiguous as to which products they apply. Use of references to organic or logos on email footers, invoices, websites should be accompanied by an explanatory wording e.g. "We have a range of organic products, see our product listings for more details", and within the product listing a clear identification of products. For contract manufacturers/packers wording describing the certified service offered should be included e.g. “We offer certified packing of organic products”.

### Guidance
If your company name includes the word organic you may not use this on the labels of non-organic products - e.g. labels of non-organic products sold by 'XXX Organic Farm' could replace their branding with 'XXX Farm'. On websites and marketing materials 'XXX Organic Farm' can be used provide it is clear and unambiguous to buyers which products are organic and which are not.

**Labelling legislation**

Along with meeting these standards for labelling, you will also need to make sure your labels meet other relevant labelling legislation such as *Regulation 1169/2011* on the provision of food information to consumers, and the *Food Information Regulations*.

**List of terms for organic (annex IV of (EC) 2018/848)**

### SA NI 14.10 Detailed labelling requirements

<table>
<thead>
<tr>
<th>Standards</th>
<th>Guidance</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>SA NI 14.10.1 Using the EU organic logo</strong></td>
<td>The use of the logo is mandatory for all organic pre-packaged food produced within Northern Ireland or the European Union. The terms of its use are set by the EU and more information can be found online.</td>
</tr>
<tr>
<td>1. You must display the EU logo on labels of packaged organic products produced in Northern Ireland or the EU.</td>
<td>You can download the EU logo in various formats from here.</td>
</tr>
<tr>
<td>2. Use of the EU logo is optional on product labelled in a third country.</td>
<td>The white EU logo with the black stars is designed to be used on a dark background only. When the EU logo is used it must appear within a box or a black outline.</td>
</tr>
<tr>
<td>3. The EU logo is published for use in green as shown below. The reference for single colour printing is Pantone 376, or if you print using four colour process, 50% cyan, 100% yellow.</td>
<td>If your product is being packed outside the EU, you do not need to apply the EU logo. However, due to the widespread recognition of the EU logo across Europe you may wish to apply it if the products are destined for the EU market.</td>
</tr>
<tr>
<td>4. Where colour is not possible you may use black and white.</td>
<td>Products without packaging do not need to display the EU logo (see standard 15.3.2 for details of what you need to include)</td>
</tr>
</tbody>
</table>
5. The EU organic logo must:
   a) appear at least 9mm high and 13.5mm wide, or
   b) appear 6mm high for very small packages, and
   c) have a proportional height to width ratio of 1:1.5.

6. The EU organic logo may appear:
   a) in negative, if the background of your packaging is dark
   b) in the single colour of your packaging if you are only able to print one colour
   c) with an outer line around it to improve how it stands out on coloured backgrounds
   d) in conjunction with other logos and text referring to organic, providing this does not overlap, obscure or change the logo.

7. The organic production logo of the European Union shall not be used in the labelling, the presentation or the advertising of such products, and shall not be used to advertise the mass caterer.

   (EC) 2018/848 Art. 32(1)(2)(3)
   (EC) 2018/848 Art. 33;
   (EC) 2018/848 Annex V

**SA NI 14.10.2 Declaring ingredient origin**

1. When the EU logo is used you must also include a declaration in relation to the EU - ‘EU agriculture’, ‘non-EU agriculture’, or ‘EU/non-EU agriculture’. This must appear:
   a) in the same visual field as the EU organic logo;

   If the EU logo is used the declaration needs to be in the same visual field as the EU logo.
b) below the certifier code, and
c) no more prominent than the sales description.
2. The word ‘Agriculture’ may be replaced by ‘Aquaculture’ where appropriate.

(EC) 2018/848 Art. 32(1)(2)
(EC) 2021/279 Art. 3(3)

3. You can replace ‘EU’ or ‘non-EU’ with a particular country if all ingredients were farmed or grown there. In this case only one declaration is required. You do not have to count small amounts of ingredients up to a total of 2% of the agricultural ingredients.

If the product contains 98% ingredients grown in a particular country it can be labelled as that specific country. For example, lamb produced in Wales could be labelled as Welsh Agriculture.

These standards comply with European Commission organic regulation 2018/848, which has replaced regulations 834/2007 and 889/2008. The Soil Association has identified this standard as an area where the new regulation is less strict, therefore the requirement will be kept at the same level as the previous regulation and marked as a Soil Association higher standard. This standard will undergo a review process in 2023 to determine whether it should be brought into line with 2018/848, or should remain a higher standard.

**SA NI 14.10.3 Using the Soil Association symbol on products**

1. You can only use the Soil Association symbol on organic products that meet the Soil Association standards.
2. You must reproduce the symbol from original artwork and it must appear:
   a) complete and upright
   b) in proportion to the product description
   c) at least 10mm in diameter (example 'A')
   d) in black or white (examples 'B' and 'C')
   e) clearly visible
   f) clear and legible over the whole of a background, for example if used over a photograph (example 'D')
   g) no less prominent than the EU logo

For more information on how to become certified to the Soil Association standards and the use of our symbol, please refer to section 14.3. Retailers who are exempt from being certified (standard 14.3.2) may sell Soil Association certified products which include the SA symbol on their labelling, and make use of the Soil Association symbol in the marketing of those products provided it is clear and unambiguous as to which products the symbol applies.

You can download the symbol pack directly from our [website](#). We also have the symbol available for use in Welsh.

If you are using a Soil Association certified sub-contractor to label your product they may apply the Soil Association symbol to your packaging. Organic operators certified by other certification bodies can also apply the Soil Association symbol on your packs, but only if there is a [Contract Symbol User](#).
If you wish to use the symbol at a smaller size than 10mm in diameter (for example on very small packaging) or in a colour other than black and white, you must seek permission first.

3. The symbol must not appear:
   a) against a background that affects the legibility of the symbol (example 'E')
   b) incomplete
   c) at an angle
   d) within an extra circle either of an outline or solid colour (example 'F')
   e) in more than one colour (example 'G')
   f) with a different font or typeface (example 'H')

Examples of how not to use the symbol are shown below:
### Why?
The Soil Association symbol is the most recognised organic certification mark in the UK and has gained the trust, respect and confidence of consumers and producers across the globe. The Soil Association symbol demonstrates that an organic food or non-food product meets our higher standards for animal welfare, health, consumer protection and the protection of the natural environment.

### SA NI 14.10.4 Using the Soil Association symbol off-product
You may use the symbol on company stationery, promotional literature and websites if we certify a range of your products, providing it is not misleading to the consumer as to which products the symbol applies.

### Soil Association higher standard
If you sell SA certified products and also non-SA certified products (including non-organic products), any use of the SA symbol must be clear and unambiguous as to which products it applies. Use of the symbol on email footers, invoices, websites should be accompanied by an explanatory wording e.g. “We have a range of products which meet the Soil Association standards, see our product listings for more details”, and within the product listing a clear identification of products. For contract manufacturers/packers wording describing the certified service offered should be included, e.g. “We offer packing of products certified to Soil Association standards”.

You can download the symbol pack directly from our [website](#). We also have the symbol available for use in Welsh.
The Soil Association symbol should only be used in relation to products or enterprises certified to Soil Association standards to avoid misleading consumers.

### SA NI 14.11 Making claims on your labels

#### Standards

**SA NI 14.11.1 Using accurate descriptions**

1. The term ‘organic’ can only be used to describe products (in labels, advertising and commercial documents on products) that meet the requirements of these standards, unless the term is not being used in relation to agricultural products in food or feed which fall under the scope of these standards.

2. You must **not** use any terms, including terms used in trademarks, company names and practices, labels or advertising, that could mislead consumers into believing products are organic when they are not.

   *(EC) 2018/848 Art.30(2)*

#### Guidance

Your sales description and product name will need to accurately describe your product. You can’t use the word organic, even if it is part of your company trade name, in relation to non-organic products (e.g. on labels). Refer to standards 14.8.1 for further details.

You need to make sure that the way you label your products is not misleading.

For example if:

- you label your product as ‘organic mint biscuits’, it must contain organic mint
- your product does not contain organic mint, you can only label it as ‘organic biscuits with mint’
- you label your product as ‘organic strawberry ice cream’ it needs to contain organic strawberries
- your product does not contain organic strawberries but uses a natural strawberry flavouring instead, it could only be labelled as ‘organic ice cream with strawberry flavour’.
- your company name includes the word organic, you cannot use it on non-organic products. For example, you could not use the name ‘Brown Farm Organics’ on non-organic products.

If you produce organic and non-organic lines in the same range, you need to make sure that the packaging is sufficiently distinguished (for example by colour, design or wording) to prevent confusion.

The standards in this section outline the requirements in relation to certain labelling claims. As well as meeting the requirements of these standards, you will need to make sure your products comply with statutory labelling legislation.
Food labelling legislation is harmonised at an EU level. In England, responsibility for food labelling legislation and policy is split across Defra, the Food Standards Agency (FSA) and the Department of Health (DH). For Scotland, Wales and Northern Ireland all domestic standards legislation is the responsibility of the FSA.

Visit this [website](#) for details.

You will need to be able to substantiate any claims that you make on your labels.

For example:
You should not use phrases such as ‘GMO free’ unless you can prove this, if challenged. Instead you could use:
- ‘organic standards prohibit the use of GM materials’, or
- ‘non-GM’.

You should not use phrases such as ‘pesticide free’ unless you can prove this, if challenged. Instead you could use:
- ‘organic agriculture aims to avoid the use of artificial pesticides and fertilisers’
- ‘organic standards restrict the use of artificial pesticides and fertilisers’, or
- ‘grown under organic standards which minimise the use of artificial pesticides and fertilisers’.

We worked closely with the Advertising Standards Authority to draw up a document of approved advertising claims you can make when selling organic. If you can find a copy on our [website](#).
### SA NI 14.12 Labelling in specific scenarios

<table>
<thead>
<tr>
<th>Standards</th>
<th>Guidance</th>
</tr>
</thead>
</table>
| **SA NI 14.12.1 Labelling requirements for licensees (including retailers, farm shops and farmers' market stalls) selling direct to consumers**<br>You must display your certificate of registration in a way that is clearly visible to your customers. If only some of your products are organic or if your organic supply is sporadic, you also need to provide additional information so that it is clear which products or produce the organic certificate refers to.  
 *Soil Association higher standard*<br>In order to make it clear which products your organic certificate relates to, you could also display your trading schedule which lists all the products you are certified to sell. If your organic supply is sporadic, or if the certificate only relates to some items that you are selling, you could add an explanatory note making it clear which products the certificate relates to, and how these are indicated.  
Display the certificate in a sensible location in store. For example, if your store is only licensed to cover the loose fruit and vegetables you sell, then put the certificate near the produce.  
Online retailers do not have to include their certificate of registration on their website, but they must indicate which products are covered by their Soil Association organic certification. Refer to use of Soil Association symbol in standard 14.5.2. |

**Why?**<br>This standard helps to avoid misleading consumers by making it clear which products on sale are organic.

---

### SA NI 14.13 Preserving organic integrity

**What is the chapter about?**<br>The standards in this section cover which substances are prohibited and what you need to do to prevent contamination.

<table>
<thead>
<tr>
<th>Standards</th>
<th>Guidance</th>
</tr>
</thead>
</table>
| **SA NI 14.13.1 Reducing the risk of contamination**<br>In order to avoid contamination with products or substances that are not authorised for use in organic production, you must take the following precautionary measures:<br>  a) put in place and maintain measures that are proportionate and appropriate to identify the risks of contamination of organic production and products with non-authorised products or substances, | You must consider what you do to reduce the risk of contamination at all stages of production, including processing, storage and transport, including how you determine that the measures you have in place are sufficient and how you monitor that they remain effective. You could use details of any sampling and testing that you carry out.  
Examples of risks include:<br>  * feed containing non-permitted ingredients |

---
including systematic identification of critical procedural steps;
b) put in place and maintain measures that are proportionate and appropriate to avoid risks of contamination of organic production and products with non-authorised products or substances;
c) regularly review and adjust such measures;
d) document the risks identified and the measures you put in place, and
e) comply with other relevant requirements of these standards that ensure the separation of organic, in-conversion and non-organic products.

(EC) 2018/848 Art 28(1)
(EC) 2018/848 Annex IV(1.2)(1.4)

Containers for storage or transport must be of food grade quality.

All procedures must be consistently followed and appropriate records must be maintained to evidence this. Your Inspector will be checking that the procedures you have in place are adequate to reduce the risk of contamination.

Staff training is an important way to ensure that the risk of contamination is minimised. Ensure that all new staff are adequately trained, particularly when changes are made to these organic standards and your own operational procedures.

SA NI 14.13.2 Genetic modification

1. If a product contains GMOs, consists of GMOs or is produced from GMOs it must not be labelled or advertised with reference to organic production.

2. GMOs, products produced from GMOs, and products produced by GMOs shall not be used in food or feed, or as food, feed, processing aids, plant protection products, fertilisers, soil conditioners, plant reproductive material, micro-organisms or animals in organic production. You must be able to demonstrate the above.

3. For food and feed products in the EU, Directive 2001/18/EC, Regulation (EC) 1829/2003 or Regulation (EC) 1830/2003 are applicable, and you may rely on labels or any other accompanying documents to confirm that they are non-GM, unless you have other information that the products do not meet the Directive and Regulations listed above.

4. For products that are not food or feed, or products that could be produced by GMOs of for products we are certifying outside the EU, you will need to get confirmation from your suppliers, in the form of a non-

In the EU, if a product contains GMOs or their derivatives then it must be labelled as such, (as described in 14.12.3.3) so the regulation allows labels to be relied upon as evidence to indicate whether food contains GMOs or their derivatives. This would apply to products such as agricultural crops, like maize and soya, or their derivatives like lecithin or starch. However, Directive 2001/18/EC, Regulation (EC) 1829/2003 and Regulation (EC) 1830/2003 do not extend to the use of ingredients produced by genetically modified micro-organisms. For example, enzymes and vitamins. This means that it cannot be automatically assumed that a product complies with the specific GMO requirements of the organic regulations. For this reason, we require a completed GMO declaration for all products that may be a GM risk.

Our GMO declaration form explains which additives, processing aids and ingredients are GMO risks. The Certification Team can also confirm any other ingredients which are a GMO risk.

Please contact us if you need a blank template of the non-GM declaration form for your suppliers to complete.

Please note: The GMO declaration expires 12 months from the date signed. Supporting information must be dated within 12 months of sending to SA.
GM declaration, that the products supplied have not been produced from or by GMOs. **(EC) 2018/848 Art. 11**

**Certification.** If older than 12 months, you must check with the supplier that the statement is still valid and provide evidence of this to SA Certification.

14.12.3.3 also says, if you have other information that the products do not meet the GM labelling requirements then you cannot rely on the information stated on the label. For example, test results which show GM DNA in the product. If you or a third party tests any of your organic products and gets a positive result, you must inform us of that result as soon as possible.

Farmers purchasing animal feeds may rely on the information provided on the labels, or accompany documents. Feed used must be certified organic so any checks on GM status will have been done by the feed processors.

The European regulations and directives referred to in the standard only apply to product within the EU market. This means that if we are certifying your business outside the UK/EU, supplier declarations will be required for all GM risk ingredients and feed to confirm the products have not been produced from or by GMOs.

5. For Soil Association products and ingredients, you will need to provide additional information to demonstrate their non-GM status. **Soil Association higher standard**

**Why?**

GM ingredients have no place in organic food. In order to provide additional assurance that Soil Association certified products and ingredients do not contain GM, we require suppliers of risk products and ingredients to provide additional verification to prove their non-GM status.

**SA NI 14.13.3 Nanoparticles**

1. Organic products must **not** contain or consist of engineered nanoparticles. **(EC) 2018/848 Art. 7(e); Art. 3(63)**

The definition of engineered nanomaterial, as stated in **(EC) 2015/2283** is as follows:

‘engineered nanomaterial’ means any intentionally produced material that has one or more dimensions of the order of 100 nm or less or that is composed of discrete functional parts, either internally or at the surface, many of which have one or more dimensions of the order of 100 nm or less, including structures,
Agglomerates or aggregates, which may have a size above the order of 100 nm but retain properties that are characteristic of the nanoscale.

Properties that are characteristic of the nanoscale include:

(i) those related to the large specific surface area of the materials considered; and/or
(ii) specific physico-chemical properties that are different from those of the non-nanoform of the same material.

Examples of products that we know may contain manufactured nanoparticles and that are commercially available include titanium dioxide and zinc oxide used in health and beauty products. The manufactured nanoparticle versions of these products are transparent.

<table>
<thead>
<tr>
<th><strong>SA NI 14.13.4 Nanoparticles in organic products</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>2. In addition to standard 1.11.3, all other organic products (including feed) within the scope of these standards must not contain engineered nanoparticles.</td>
</tr>
<tr>
<td>3. This standard does not apply to incidental nanoparticles.</td>
</tr>
</tbody>
</table>

**Why?**

Nanomaterials may introduce new or heightened risks of toxicity, which are currently little understood. The possible effects of these nanomaterials on the environment, human and animal health are currently unknown.

Nanotechnology involves the manipulation of materials and the creation of structures and systems at the scale of atoms and molecules. This can be either through simple physical processes or by specific engineering.

Nanomaterials include:

- nanoparticles and nanoemulsions
- nanostructures including nanocapsules, nanotubes, fullerenes (buckyballs), quantum dots and nanowires.

The properties of nanomaterials can differ significantly from those at larger scales because quantum effects start to occur at the nanoscale. These differences may be in chemical reactivity and biological activity, solubility and mobility, colour and transparency, among others.

These are examples of known and developing uses of nanotechnology:

- food additives, such as for flavouring, enhanced absorption of nutrients or modifying texture
- in health and beauty products, such as in transparent mineral sunscreens and make-up products
- in packaging, including quantum dots for traceability, UV light filters, nanoclays as gas barriers and carbon nanotubes to alter strength-to-weight ratio
- medicinal, such as drug delivery, DNA vaccines and advanced therapies
- environmental, such as soil remediation
- pesticides, such as pesticide delivery in nanoemulsions, and textiles, such as stain and water-resistant coatings.

### SA NI 14.14 General rules on cleaning

<table>
<thead>
<tr>
<th>Standards</th>
<th>Guidance</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>SA NI 14.14.1 Cleaning measures</strong>&lt;br&gt;3. You must have suitable cleaning measures in place to avoid contamination and maintain the integrity of your products throughout production, processing and storage.</td>
<td>For cleaning chemicals permitted in aquaculture facilities please refer to 15.14. You must be able to demonstrate your cleaning procedures, with details of how you clean harvesting/handling equipment, storage areas and equipment used for organic production. Explain how you limit the risk of contamination of organic product from microbial contaminants, from cleaning chemicals, non-permitted substances and from non-organic product.</td>
</tr>
<tr>
<td>4. You must monitor your cleaning measures to make sure they are effective, adjusting measure where appropriate, and keep records to show that you have done this.</td>
<td>You will need to ensure your staff, or contractors using their own equipment, are trained to carry out effective cleaning to prevent contamination of your organic products.</td>
</tr>
<tr>
<td>5. If you process or store both non-organic and organic at the same site, you must ensure organic processing or storage is only carried out once suitable cleaning of the equipment and/or storage area(s) has been carried out.</td>
<td>Your cleaning procedures need to be clear and need to set out what will be cleaned, how, with what frequency (e.g. daily, weekly, monthly or annually), who is responsible, what chemicals and equipment needs to be used and details of the final rinse of food contact surfaces with potable water (where appropriate).</td>
</tr>
<tr>
<td>(EC) 2018/848 Art.28 (EC) 2018/848 Annex II Part IV(1.2)(1.4)(1.5) (EC) 2018/848 Annex III 4(c)</td>
<td><strong>Cleaning chemicals</strong>&lt;br&gt;Detergents, disinfectants, sterilants and sanitisers allowed for use in the food industry may be used for cleaning equipment and storage areas. Residues of these chemicals must be removed from surfaces in contact with organic food so that they do not contaminate organic products.</td>
</tr>
</tbody>
</table>
Sanitizers containing quaternary ammonium compounds or QACs/QUATs, such as Benzalkonium Chloride (BAC) or Didecyl Dimethyl Ammonium Chloride (DDAC) are difficult to remove from surfaces, and if not adequately rinsed will result in residues in the organic product. Brand names include Deosan, Detsan, Foamsan, Quatsan.

If you use these to clean harvesting/handling equipment, storage boxes, dairy equipment or work surfaces, which are in direct contact with organic products, you need to take measures to ensure they are not contaminating your organic product. For example:

- Switch to a cleaning product that does not contain QACs or other substances difficult to rinse and likely to contaminate products that come in contact with them.
- Check whether your rinsing procedures are sufficient by testing food contact surfaces to ensure no residues remain.

**Non dedicated equipment**

Where non-dedicated equipment or storage is used you must be able to demonstrate that the cleaning carried out before it is used for organic products is effective. This may require sampling or swabbing for analysis to demonstrate that the procedures you have in place are effective.

If you process or store non-organic you will need to have a system for checking that cleaning has been undertaken and that it is effective to remove residues of non-organic material and/or previous production. This could involve visual inspection, micro-biological testing, testing to ensure sanitisers have been removed from organic food contact surfaces, ATP testing.
### SA NI 15.0 Specific standards for organic seaweed

### SA NI 15.1 Specific rules on antifouling measures and cleaning of aquaculture equipment and facilities

<table>
<thead>
<tr>
<th>Standards</th>
<th>Guidance</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>SA NI 15.1.1 Bio-fouling</strong></td>
<td>You must remove bio-fouling organisms only by physical means and, where appropriate, return them to the sea at a distance from the farm.</td>
</tr>
<tr>
<td><strong>SA NI 15.1.2 Cleaning equipment</strong></td>
<td>You need to be able to demonstrate how you manage the removal of bio-fouling organisms.</td>
</tr>
<tr>
<td><strong>SA NI 15.1.3 Cleaning and disinfecting</strong></td>
<td>You must properly clean and disinfect the holding systems, equipment and utensils on the production unit. You may only use products allowed in these standards.</td>
</tr>
<tr>
<td><strong>SA NI 15.1.4 Products for cleaning and disinfection and biocide for aquaculture animals and seaweed production</strong></td>
<td>At inspection we may ask you to demonstrate how you clean and disinfect the holding systems using the products allowed, for example frequency of cleaning.</td>
</tr>
</tbody>
</table>

#### Guidance

- (EC) 2018/848 Annex II Part III
- (EC) 2018/848 Annex III
- (EC) 2018/848 Annex III(7)(2)
- (EC) 2018/848 Annex II Part III; Annex III(7)(4)(c)

#### Standards

- **SA NI 15.1.1 Bio-fouling**
  - You must remove bio-fouling organisms only by physical means and, where appropriate, return them to the sea at a distance from the farm.

- **SA NI 15.1.2 Cleaning equipment**
  1. You must only clean equipment and facilities by physical or mechanical measures. Where this is not satisfactory, only the substances in standard 15.1.4 may be used.
  2. Storing any non-permitted input product on the organic production unit is prohibited. This includes, but is not exclusive to non-permitted fertilisers, cleaning and disinfection products and anti-fouling substances.

- **SA NI 15.1.3 Cleaning and disinfecting**
  - You must properly clean and disinfect the holding systems, equipment and utensils on the production unit. You may only use products allowed in these standards.

- **SA NI 15.1.4 Products for cleaning and disinfection and biocide for aquaculture animals and seaweed production**
  - You may only use products which contain the following active substances, for cleaning and disinfection of equipment and facilities **in the absence of**:
    1. ozone
    2. sodium hypochlorite
    3. calcium hypochlorite

At inspection we may ask you to demonstrate how you clean and disinfect the holding systems using the products allowed, for example frequency of cleaning.
4. calcium hydroxide
5. calcium oxide
6. caustic soda***
7. alcohol
8. copper sulphate: only until 31 December 2015
9. potassium permanganate***
10. tea seed cake made of natural camelia seed only for shrimp production***
11. mixtures of potassium peroxomonosulphate and sodium chloride producing hypochlorous acid.

You may use only products which contain the following active substances, for cleaning and disinfection of equipment and facilities **in the presence and absence** of aquaculture animals **:

1. limestone (calcium carbonate) for pH control
2. dolomite for pH correction (use restricted to shrimp production)
3. sodium chloride
4. hydrogen peroxide
5. sodium percarbonate***
6. organic acids (acetic acid, lactic acid, citric acid)
7. humic acid***
8. peroxyacetic acids***
9. peracetic and peroctanoic acid
10. iodophores (only in the presence of eggs).

**(EC) 2021/1165 Annex IV**

**SA NI 15.2 Pest control**

<table>
<thead>
<tr>
<th>Standards</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>SA NI 15.2.1 Preventing contamination by pests and pest control products</strong></td>
</tr>
<tr>
<td>1. You must design and operate your buildings and controls to reduce the risk of contamination by pests.</td>
</tr>
<tr>
<td>2. You must ensure when implementing preventative measures in organic areas that you take proportionate and appropriate measures to avoid the risk of contamination of organic products.</td>
</tr>
</tbody>
</table>

(EC) 2018/848 Art. 28(1)
(EC) 2018/848 Annex II Part IV(1.5.1.7)

**Guidance**

You will need to be able to demonstrate the measures you have in place to reduce the risk of contamination by pests. This should include measures to prevent and control wild birds, rodents and insects from getting into your buildings such as:
- flyscreens
- pheromones in traps and dispensers, for monitoring pest levels or as attractants and sexual behaviour disrupters
- effective covers of waste bins
- sealing gaps and entry points

<table>
<thead>
<tr>
<th>Standards</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>SA NI 15.2.2 Treating infestations in organic products or areas used for organic products</strong></td>
</tr>
<tr>
<td>If you find infestation in organic products, on sacks or containers, in areas used for handling/storing organic products or in areas not used for organic products, you must only use pest control methods which do not contaminate the organic product.</td>
</tr>
</tbody>
</table>

(EC) 2018/848 Art.28(1)

**Guidance**

If you use pest control methods, you will need to keep records of:
- what pests you have found
- what chemicals, methods and equipment you used on them
- who did the treatment, when and which area or equipment was treated, and
- what precautions you took to prevent contamination of organic products.

For example, if you plan to use pyrethrum as a spray or fog to control insects then additional safeguards could include:
- before using pyrethrum, you will remove all organic products from the area to be treated
- you will not put organic products back into the treated area for at least 24 hours after the treatment
- you will clean all product contact surfaces in the area, (using methods allowed in Soil Association standards), after the treatment and before you process or store organic product there again.
Please note that some products have a long residual activity and must only be used in such a manner that the residues will not contaminate the organic product. For example, if you plan to use products that migrate easily, or have longer residual activity such as synthetic pyrethroids, organo-phosphorous, carbamate or organo-chlorine compounds then you must describe the additional safeguards you will put in place to prevent migration or contamination.

Rodenticides must be used only in tamper-proof bait stations and in places where there is no risk of contaminating products.

If you use pest control treatments in areas not used for organic production or storage, you must still assess the risk of contamination and take appropriate preventative measures.

You should make your pest control contractor aware that your unit is handling organic products and that you must comply with pest control procedures in section 15.2 of Soil Association standards.

Control methods on organic products
Control methods which are appropriate for use on organic products include, but are not limited to:
- carbon dioxide or nitrogen
- freezing and heating
- vacuum treatment

Control methods in organic areas
Control methods which are appropriate for use in organic areas include, but are not limited to:
- desiccant dusts such as diatomaceous earth and amorphous silica, preferably from naturally occurring sources
- electric flying insect control units, with shatterproof tubes that are positioned and cleaned correctly
- tamper resistant bait stations that contain legally approved pesticides
- sticky boards for insects
<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>SA NI 15.2.3 Using glue boards</strong></td>
<td></td>
</tr>
<tr>
<td>1. You may only use glue boards for rodents as a last resort and you must:</td>
<td></td>
</tr>
<tr>
<td>a) provide evidence to show that other methods of trapping have failed or are not appropriate, before you use the glue boards</td>
<td></td>
</tr>
<tr>
<td>b) use them according to industry best practice</td>
<td></td>
</tr>
<tr>
<td>c) check rodent glue boards at least once every 12 hours including at weekends and bank holidays, as required by the Pest Management Alliance code of practice, and</td>
<td></td>
</tr>
<tr>
<td>d) keep a record of each check.</td>
<td></td>
</tr>
</tbody>
</table>

*Soil Association higher standard*

**Why?**

In order to protect public health within high-risk environments, the use of glue boards remains an important last option when all other control methods have been considered and deemed ineffective. However, their use does raise serious animal welfare concerns. This standard ensures that glue boards are only used as a last resort and only by persons who have been given adequate training and are competent in the effective and humane use of this technique.
### SA NI 15.3 Transport, dispatch and receipt of goods

<table>
<thead>
<tr>
<th>Standards</th>
<th>Guidance</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>SA NI 15.3.1 Collection of products and transport to preparation units</strong>&lt;br&gt; If you are collecting organic, in-conversion and non-organic products at the same time, you must have measures in place to prevent any possible mixing or exchanges and you must be able to clearly identify the organic products. Your collection records need to indicate the collection days, hours, collection circuit and the time and date when products were received. <em>(EC) 2012/848 Art.23(1); Annex III(1)</em>&lt;br&gt;</td>
<td>Collection records.</td>
</tr>
</tbody>
</table>

**For additional requirements for labelling of retail packed products, please refer to chapters 14.9 and 14.10.**

If your product is not prepacked for retail, or it goes on for further processing, you can put ingredient information either on the label, or on a document with the product provided it can be clearly linked with the product. For example, grain moved from a dryer to a mill would need to be accompanied by a delivery note with full supplier address, product information (including organic status), batch, haulier and vehicle identification and consignee address.

Labelled packaging helps identify organic products and keeps them sealed which limits the risk of contamination and substitution. However, there are products that need to be transported in loose bulk, for example milk on a tanker or fruit and vegetables in open top boxes.

**Records of transportation of loose organic products.**

However you choose to transport your products, you will need to make sure you have minimised the risk of contamination or substitution with non-organic products using clear labelling and separation. For example, if you are transporting loose fruit and vegetables in open top boxes, consider transporting the organic or non-organic in separate vans. Or, close the tops of the boxes containing organic to prevent accidental contamination.

<table>
<thead>
<tr>
<th>SA NI 15.3.2 Labelling &amp; transporting products</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>1. If you send an organic or in-conversion product to another company, including retailers, wholesalers and other licensees for further processing, packing or re-labelling then you must:&lt;br&gt; a) ensure it is transported in a way that would prevent alteration, including substitution, of the content cannot be achieved without manipulation or damage of the seal.&lt;br&gt; b) label it clearly with,:&lt;br&gt; (i) the product name and its organic status&lt;br&gt; (ii) the name and address of the operator, and, if different, the seller or owner of the product&lt;br&gt; (iii) certification body code&lt;br&gt; (iv) product traceability code, such as batch or lot number&lt;br&gt; (v) %organic content of the product (if less than 95%)&lt;br&gt;</td>
<td>For additional requirements for labelling of retail packed products, please refer to chapters 14.9 and 14.10.</td>
</tr>
<tr>
<td>2. If this information is provided on the accompanying documentation, it must also include information on the supplier and/or transporter.</td>
<td></td>
</tr>
</tbody>
</table>

If your product is not prepacked for retail, or it goes on for further processing, you can put ingredient information either on the label, or on a document with the product provided it can be clearly linked with the product. For example, grain moved from a dryer to a mill would need to be accompanied by a delivery note with full supplier address, product information (including organic status), batch, haulier and vehicle identification and consignee address.

Labelled packaging helps identify organic products and keeps them sealed which limits the risk of contamination and substitution. However, there are products that need to be transported in loose bulk, for example milk on a tanker or fruit and vegetables in open top boxes.

**Records of transportation of loose organic products.**

However you choose to transport your products, you will need to make sure you have minimised the risk of contamination or substitution with non-organic products using clear labelling and separation. For example, if you are transporting loose fruit and vegetables in open top boxes, consider transporting the organic or non-organic in separate vans. Or, close the tops of the boxes containing organic to prevent accidental contamination.
3. You do not need to use closed packaging, containers or vehicles if:
   a) transport takes place directly between two organically certified operators
   b) the transport only includes organic or in-conversion products
   c) products are accompanied by a document containing the information required in point 1b above
   d) both the sending and receiving operators keep records of the transportation.

   *(EC) 2018/848 Annex III (2.1)(2.2)
   (EC) 2018/848 Annex III
   (EC) 2021/642 Art 23.2(a)*

4. You must include the words ‘Soil Association Organic’ or the Soil Association symbol on the packaging of products certified according to Soil Association standards.

   *Soil Association higher standard*

**Why?**
Soil Association certified products have been produced and processed to organic standards that are higher than the EU organic regulation. Writing ‘Soil Association Organic’ on the packaging helps to identify products that have met these higher standards.

**SA NI 15.3.3 Receiving organic products**
When you receive an organic or in-conversion product you must check, upon delivery that the product is labelled according to standard 15.3.2 above and packed appropriately so that it cannot be mistaken or mixed up with other products. You must crosscheck that the label on the product matches the information on the accompanying documents and provide an account of how you check goods upon receipt.

   *(EC) 2018/848 Annex III Part V(5)*

When receiving goods from other units or operators you need to have a system in place for checking the organic status of the products and have records to show these checks are always made. Please see the record keeping standards (chapter 14.3) for details of the information you will need to record.

If you cannot be sure about the organic status of a delivery, for example if information is missing or incorrect, you will need to either:
- get written confirmation from the supplier
- send it back
- sell it as non-organic
- use it in non-organic products.
### SA NI 15.4 Storage of products

<table>
<thead>
<tr>
<th>Standards</th>
<th>Guidance</th>
</tr>
</thead>
</table>
| **SA NI 15.4.1 General separation**<br>You must manage your organic storage areas and containers in such a way to a) ensure identification of lots and b) avoid any mixing with or contamination from products or substances that we do not allow in these standards. Your organic storage areas, containers and products must be clearly identifiable at all times.  
*(EC) 2018/848 Annex III(7.1)* | Demonstrate that your organic products are clearly identified and separated from areas used for other purposes. Examples include, but are not limited to:<br> - identify the room, area, or racking with the word ‘organic’ to show that it is for storing organic products  
- identify all organic materials clearly to avoid accidental contamination  
- have sufficient space or barriers around the organic storage area to stop accidental contamination  
- only use stores, bins and containers that are made of materials suitable for contact with the food they are to store  
- dedicate and identify bins and containers as organic  
- prevent contamination by birds, insects and vermin  
- clean the stores regularly so that there are no residues which could contaminate organic products or encourage pests.<br>Also refer to the ‘preserving organic integrity’ section, for details of contamination and products and substances we do not allow. |
| **SA NI 15.4.2 Handling and separating organic and non-organic products**<br>When you use the same equipment and premises to store and handle both organic and non-organic products you must:<br> a) avoid the risk of mixing and exchanging organic and in-conversion products with other products and foodstuffs by clearly identifying and separating them during the production process, and  
 b) effectively clean equipment and storage areas used to handle or store non-organic products before handling or storing organic and in-conversion products.  
*(EC) 2018/848 Annex II Part IV(15); Annex III(7.4)* | Also refer to the ‘preserving organic integrity’ section (chapter 14.3), for details of contamination and products and substances we do not allow. |
| **SA NI 15.4.3 Storing unauthorised inputs on organic units is prohibited**<br>Storing any non-permitted input product on the organic production unit is prohibited. This includes, but is not exclusive to non-permitted fertilisers, cleaning and disinfection products and anti-fouling substances. |
SA NI 15.5 Packaging

### Standards

**SA NI 15.5.1 Scope**
These standards apply to packaging of products that you introduce into the supply chain.

We define packaging as all primary (retail), secondary (grouping, display) and tertiary (transport) materials used for:

- containing
- protecting
- preserving
- handling
- storage
- delivery
- labelling
- marketing, and
- presentation of your products.

Note - we include bulk bins but not transport pallets in this definition.

*Soil Association higher standard*

### Guidance

#### Packaging Legislation

This standard applies to products you process, pack or label, (including on farm), or have contract made for you, (including if you're a contracted symbol user). This standard does not apply if you purchase an already certified product (for example, a wholesaler buying an already certified product). In this case you do not have to supply information on the packaging of that purchased product.

Keep in mind that you must make sure your packaging meets all relevant legislation relating to packaging, packaging waste and materials in contact with food.

For example, for products sold in the EU such legislation includes, but is not limited to:

2. the European Standard for Compostable Packaging *(EN13432)* – if you are using compostable or biodegradable packaging.

Environmental information claims and symbols on your packaging need to be clear, truthful and accurate. In the UK, you will need to make sure your packaging conforms to Defra’s Green Claims code.

For further information on what constitutes primary, secondary and tertiary packaging please refer to the Defra definitions of packaging class data.
The production, use and disposal of packaging can have a big impact on the environment and human health. We believe that organic products should be packaged in ways that reduce the negative impacts of packaging. This fits with the principles of protecting the environment and biodiversity that underpin organic food and farming, and meets consumer expectations of organic products.

Packaging serves an important role in preventing food waste by protecting and extending the shelf life of products. It also helps to protect consumers by preventing contamination and substitution of organic products with non-organic alternatives. These packaging standards aim to maximise the benefits and avoid the negative impacts of packaging.

<table>
<thead>
<tr>
<th><strong>SA NI 15.5.2 Cellulose-based materials</strong></th>
<th>Demonstrate that you have not used these materials, for example by having written confirmation from your supplier.</th>
</tr>
</thead>
<tbody>
<tr>
<td>If you use cellulose-based materials, such as corrugate, bleached paper or cardboard, it must be totally chlorine free (TCF) or elemental chlorine free (ECF). Recycled paper must be process chlorine free (PCF).</td>
<td></td>
</tr>
<tr>
<td><strong>Soil Association higher standard</strong></td>
<td></td>
</tr>
</tbody>
</table>

**Why?**
The use of chlorine bleaching has a high environmental impact and its manufacture can result in the release of toxic chemicals such as dioxins and other pollutants.

<table>
<thead>

</table>

**Why?**
Aluminium has been linked with the onset of Alzheimer’s disease and other degenerative mental states. Lacquering the foil prevents the aluminium from reacting with food acids. Producing safe and healthy food is an important principle of organic food processing.

<th><strong>SA NI 15.5.4 Plastic materials, coatings, dyes or inks</strong></th>
<th>Demonstrate that you have not used these materials, for example by having written confirmation from your supplier.</th>
</tr>
</thead>
<tbody>
<tr>
<td>You must <strong>not</strong> use plastic materials, coatings, dyes or inks that contain phthalates if they will be in direct contact with foodstuffs.</td>
<td></td>
</tr>
<tr>
<td><strong>Soil Association higher standard</strong></td>
<td></td>
</tr>
</tbody>
</table>

**Why?**
Phthalates can have a negative impact on human health, for example they have endocrine disrupting properties.
### SA NI 15.5.5 PVC

You must not use polyvinyl chloride (PVC) unless alternative materials are not available or are functionally unsuitable, as listed in the guidance section of this standard.

**Soil Association higher standard**

Demonstrate that you have not used these materials, for example by having written confirmation from your supplier.

You may use other chlorinated plastics, such as PVdC.

There are some specific circumstances where we are aware that no suitable alternatives to PVC currently exist yet. These include:
- metal jar lids or caps (e.g. for jams, sauces and baby food), and
- tamper evident seals on jar lids or caps.

The Soil Association’s Packaging Working Group will review this list on a regular basis.

You may use metal jar lids, caps and tamper evident seals that contain PVC, however please do make your packaging supplier aware that a PVC free alternative is preferable should it become available.

PVC film overwrap may be used where a non-PVC film is unavailable in suitable quantities or is not fit for purpose. If you wish to use a PVC film wrap please contact the Certification Team. We will need evidence from you and your suppliers that a PVC free alternative is either not available or not suitable for the purpose you intend. You may continue to use PVC in these cases until a suitable alternative becomes available. Each year we will contact you to see if you have found a suitable PVC free alternative.

#### Why?

The production, use and disposal of PVC is associated with a range of environmental and human health issues. PVC often contains additives which are added to improve flexibility and plasticity, including phthalates. PVC can also contain other toxic substances such as chlorinated paraffins, organic tin compounds and alkyl phenols.

The environmental hazards of PVC go beyond those associated with other plastics. Some of today’s most worrying environmental contaminants are released during the production of PVC or its feedstocks and during the disposal of PVC products.

### SA NI 15.5.6 Non-GM packaging

You must not use packaging materials or substances that contain, have been derived from, or manufactured using genetically modified organisms or genetically engineered enzymes, unless alternative materials are functionally adequate.

Adequate demonstration of non-GM for packaging materials includes:
- Raw materials made from organic crops
- Non-GMO Project certification
- IP or PCR testing results for the raw materials
unsuitable or not available, as indicated in the guidance section of this standard.  

Soil Association higher standard

- Polylactic Acid (PLA) is sometimes used for compostable or biodegradable packaging. PLA is a biopolymer made from natural sugar sources and many of these sugar sources are high GM risk (such as sugar beet and maize).

Only PLA from non-GM sources can be used in the packaging of organic products. This includes teabags. You will need to provide a non-GM declaration to prove the PLA is not produced from or by GM.

There are some cases where it is not possible to trace the source feedstock of packaging materials in order to verify whether or not it is derived from GM, or there are no suitable alternative options which are non-GM. An example of this is lids containing epoxydised soybean oil (ESBO). In cases where there is no functional alternative, we can give you permission to use the packaging. This permission would be subject to annual review and may be revoked should a technological alternative appear on the market in sufficient quantity.

Any permission granted will be reviewed by the Soil Association’s Certification Committee on an annual basis.

This standard also applies to cotton teabag strings. Using organic teabag strings means you automatically meet the requirements of this standard. If your tea bag strings are non-organic you will need to provide details of the country of origin of the cotton used in them, and/or an IP certificate to prove they are not made with genetically modified cotton.

Why?
Genetic modification is counter to the principles and practice of organic food and farming and does not meet consumer expectation of organic products. Whilst most packaging derived from GM materials no longer contain GM DNA, they are still derived from raw materials which have been genetically modified.

SA NI 15.5.7 BPA and other bisphenols in food-contact materials
You must not intentionally use Bisphenol A (BPA) or other bisphenols in materials that will be in direct contact with foodstuffs.

Soil Association higher standard

- Bisphenol A (BPA) is a chemical found in some plastics and used in the manufacture of epoxy resins. It is commonly found in the linings of some food and beverage cans. Alternatives to BPA include epoxy-phenolic, modified polyester and acrylic.

The wording ‘intentionally use’ refers to the fact that some materials are classified as BPA-NI, where “NI” stands for ‘non-intentional’. This classification
means that although there is no BPA added as a constituent of a lacquer, BPA 
may be present in the pipework, raw material packaging, processing equipment 
etc. and small amounts may be picked up by the finished product during 
production. Although you should avoid them where possible, you can still use BPA-NI materials for the time being. We will monitor the situation with BPA-NI 
materials with a view to totally eradicating BPA from all food contact materials in 
due course.

Type 7 plastics may be made from BPA. Type 3 plastics (PVC) could also contain 
BPA, but only in the case of flexible PVC which is prohibited under 15.5.5 of these 
standards.

Demonstrate that you have not used BPA or other bisphenols in your food 
contact materials, for example by having written confirmation from your 
supplier.

**Why?**
Studies have shown that BPA has endocrine disrupting properties and toxic effects on our ability to reproduce. Studies have also raised serious 
concerns over other bisphenols that are sometimes used as an alternative to BPA, such as BPAF, BPB and BPZ. The toxic effects of Bisphenols are 
evident even at low concentrations.

</table>
| SA NI 15.6.1 Site suitability for farming and collection of wild seaweed | When you start your aquaculture operation, or when you add new sites, we 
will require details of the assessments you have made. Demonstrate that the 
water quality meets this standard. |

Defra, the competent authority in the UK, will provide further guidance. We 
expect it to reflect the criteria below:

- Water quality assessment could be based on the Bathing Water Directive 
  which is available from the Environment Agency website.
- This should include details of neighbouring operations and an assessment 
of the contamination risk these pose and how this will be minimised.
3. are free from pollution or pollutants that would affect the organic integrity of the product.
4. where the cultivation or collection of seaweed does not affect the stability of the natural ecosystem or existing species within it.

*EC* 2018/848 Annex II Part III

Where there is no data available you should use other methods to assess your water quality. This should be based on risks and may require analysis depending on the nature of those risks. Water testing may be required.
## SA NI 15.7 Seaweed production

<table>

</thead>
<tbody>
<tr>
<td><strong>SA NI 15.7.1 Organic and non-organic production</strong>&lt;br&gt;Organic and non-organic production units must be adequately separated based on:&lt;br&gt;1. the natural situation&lt;br&gt;2. separate water distribution systems&lt;br&gt;3. distance&lt;br&gt;4. tidal flow&lt;br&gt;5. upstream and downstream location of the organic production unit.</td>
<td>Your competent authority may designate locations or areas unsuitable for organic seaweed harvesting and may establish minimum separation distances between organic and non-organic production units.&lt;br&gt;&lt;br&gt;<em>(EC) 2018/848 Annex II Part III (1.2)</em></td>
</tr>
<tr>
<td><strong>SA NI 15.7.2 Seaweed harvesting biomass estimate</strong>&lt;br&gt;For seaweed harvesting sites, you must conduct a one-off biomass estimate at the start of production.</td>
<td>Show how you have estimated your biomass and justify how the methodology that you use is appropriate for your environment. &lt;br&gt;&lt;br&gt;<em>(EC) 2018/848 Annex II Part III (2.4.1)</em></td>
</tr>
<tr>
<td><strong>SA NI 15.7.3 Sustainable harvesting of wild seaweed</strong>&lt;br&gt;1. You must harvest wild seaweed without significant impact on the aquatic environment.&lt;br&gt;2. You must put in place measures that ensure seaweed regeneration, taking into account:&lt;br&gt;   a. harvesting technique&lt;br&gt;   b. minimum sizes&lt;br&gt;   c. minimum ages&lt;br&gt;   d. reproductive cycles or&lt;br&gt;   e. size of remaining seaweed.&lt;br&gt;3. You must keep records that demonstrate:&lt;br   a. the history of harvesting activity for each species in named beds&lt;br   b. that the seaweed harvested is wild seaweed and that it is harvested according to these standards&lt;br   c. that where you harvest seaweed from a shared or common harvest area, the total harvest complies with these standards.&lt;br&gt;4. Your records of harvest estimates and sources of potential</td>
<td></td>
</tr>
<tr>
<td></td>
<td>You must be able to demonstrate how you manage and monitor the sustainability of your operation. You need to provide a map of the harvest area and keep records of the species you harvest.</td>
</tr>
</tbody>
</table>
pollution must provide evidence that you are managing the harvesting areas sustainably with no long term impact.

5. Where you are harvesting from a shared documentary evidence produced by the relevant authority designated by the Member State concerned shall be available showing that the total collection complies with this Regulation.

(EC) 2018/848 Annex II Part III (2.2.1)(b)(2.4.2)(2.4.3)(2.4.4)

SA NI 15.7.4 Seaweed cultivation

1. Sustainable practices must be used in all stages of production, from collection of juvenile seaweed to harvesting.

2. Seaweed cultivation at sea must only utilise nutrients naturally occurring in the environment or from organic aquaculture.

3. Where seaweed is cultivated in coastal areas, these must meet the criteria for Class A or Class B areas as defined in Annex II of Regulation (EC) No. 854/2004 (laying down specific rules for the controls on animal products for human consumption)

4. Where seaweed is cultivated on land using external nutrient sources, the outflowing water must have the same or lower nutrient levels than the inflowing water. You may only use nutrients of plant or mineral origin as listed in Annex I.

5. You must ensure that the culture density or operational intensity does not exceed the amount which can be grown without negative effects on the environment.

6. Where possible, you must re-use or recycle ropes and other equipment used for growing seaweed.

7. Seaweed cultivation should preferably form part of a polyculture system.

8. You must record the culture density or operational intensity.

(EC) 2018/848 Annex II Part III (2.2.2)(c)

(EC) 2018/848 Annex II Part III (2.3.1)(2.3.3)(2.3.4)
