The Secret Poisoning of Our Countryside

Our wildlife is already declining due to insecticides, climate change and new diseases. Insecticides are the lead stage in this decline.

Hedgehogs are potential deathtraps for bees, butterflies and other wildlife. 97% of hedgehogs die after consuming nectar from sprayed flowers.

The latest generation of neonicotinoid pesticides can be detected in the environment for up to 10 years.

Fully ban neonicotinoids now.

We work with farmers to create healthy, biodiverse and cost-effective no-pesticide systems.

Help stop the use of neonicotinoids and save our living landscapes.

Please take action and join us today.

Neonicotinoids and the 3 scandals:

1. Neonicotinoids contain pesticides that kill not only pests but also beneficial insects such as bees and ladybirds.
2. 97% of hedgehogs die from consuming nectar from sprayed flowers.
3. There is irrefutable evidence that neonicotinoids cause brain damage and death in bees.

THE SCANDALS:

1. Over 90% of all bee species in the UK are suffering and 63% have already died.
2. The death of 97% of hedgehogs from consuming sprayed nectar.

WE MUST PROTECT INSECT LIFE AND BIODIVERSITY.

Our Wildlife is Being Poisoned

30% of all species are already at risk of extinction.

Hedgehogs are potential deathtraps for bees, butterflies and other wildlife. 97% of hedgehogs die after consuming nectar from sprayed flowers.
