

# LED Lighting Systems

Professor Simon Pearson  
Director the Lincoln Institute of Agri Food Technology

# Background

- Three primary drivers
  - Photosynthesis
  - Photoperiodism
  - Photomorphogenesis

## High Pressure Sodium supplementary lighting at 48 Wm<sup>2</sup> increases yields by

- Tomato: 18 to 25%
- Cucumber: 8 to 18%

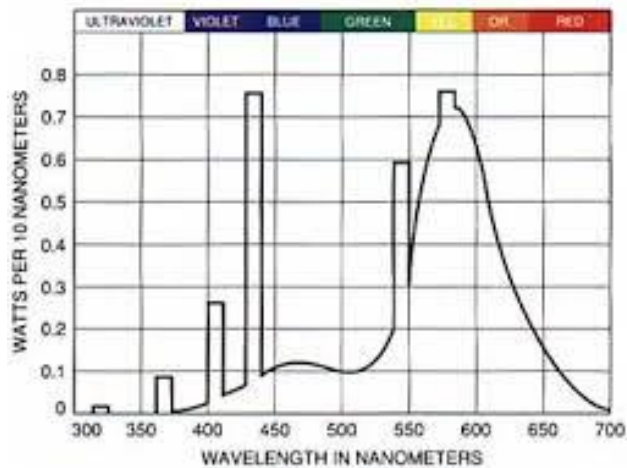

Blom and Ingratta, 1980

# Artificial Light

- 7% of the entire electrical load generated in the NL is used for crop lights

# Standard Equipment

# LED's

A very large array of new systems are available

# LEDs

- High energy efficiency.....+30%
- Haitz Law: Cost per lumen reducing by a factor of 10 every 10 years
- Controlled spectral output
- Defined luminaire distribution
- Long life

Though

- Reduced total radiation output
- Which spectra for different crops.....?

# AHDB

## Commercial Review of Lighting Systems for UK Horticulture.

### Objectives

- Test a number of commercial lighting systems.
  - Spectral output
  - $\mu\text{Mol} / \text{W}$  efficiency
  - Luminaire light distribution
- In an independent test lab.
- Very grateful to Phytolux, Chameleon, Heliospectra, Philips, Fionia for supply of lamps.

Integrating sphere at the LIA

### Heliospectra LX602G

### Phytolux: Attis 7

### Fionia 490301

### Philips DR W MB

## Chameleon/Luxim 500W Plasma

# Summary

|   | LED Units |        |        |        |        | Plasma | SONT   |
|---|-----------|--------|--------|--------|--------|--------|--------|
| <b>Test Condition</b>                     | Unit 1    | Unit 2 | Unit 3 | Unit 4 | Unit 5 | Unit 6 | Unit 7 |
| Voltage                                   | 200.4     | 240.3  | 220.4  | 411.4  | 422.7  | 240.0  | 400    |
| Current mA                                | 3262      | 946    | 1885   | 452    | 476    | 2119   | 1988   |
| Power (W)                                 | 628.4     | 208    | 403.2  | 184.3  | 198.4  | 497.9  | 646.8  |
| Power factor                              | 0.96      | 0.92   | 0.97   | 0.99   | 0.98   | 0.98   | 0.81   |
| Radiant power<br>(380 to 780nm W)         | 177.2     | 51.6   | 177.4  | 92.2   | 97.1   | 124.2  | 203.4  |
| Efficiency ( $\mu\text{mol} / \text{J}$ ) | 1.44      | 1.27   | 2.43   | 2.71   | 2.56   | 1.16   | 1.92   |
| Unit weight (kg)                          | 8.8       | 9.6    | 12.3   | 3.5    | 3.5    | 11.3   | 6.5    |
| Radiant power per<br>unit weight (W/kg)   | 20.1      | 5.3    | 14.4   | 26.3   | 27.7   | 5.5    | 31.3   |

Very diverse performance .....but...

# What is the optimal spectral quality?

The pink greenhouse.....

# Contribution of McCree

Quantum Yield of 22 Crop Species, McCree, 1972

A 44 year old classic!

# If only it was easy.....

## *Salvia splendens* 'Vista Red'

Seedlings grown at 68 °F for 4 weeks under LEDs for 18 hours/day at PAR=160  $\mu\text{mol}\cdot\text{m}^{-2}\cdot\text{s}^{-1}$  consisting of (%):

B=blue, 446 nm; G=green, 516 nm; R=red, 634 nm; HR=hyper red, 664 nm

Data from MSU

# Ultra violet is missing

## Ultra violet

- Insect activity
- Bees
- Fungal sproutation
- Crop flavour, esp Herbs
- Flower colour
- Photoinbition

Hemming et al, 2006

## UVR8

- Mechanisms now well established
- Brown and Jenkins (2005)

We need a broad spectrum but attend to UV

# New ways to use light...urban farms

# Will LED driven urban farms feed the future...?

# Urban Farms can have a very positive social impact

Outside the Aerofarms, Newark test facility!

Group which has developed the World's largest urban farm!

# Some numbers.....urban farm productivity

| Pearson's Hydroponics Ltd | LUE g per MJ | Water content | Harvest index | MJ light per Kg dry mass | MJ light per Kg wet mass | MJ electric energy 20% eff | Energy Cost £ per Kg | Energy Cost per 200g | Tesco price |
|---------------------------|--------------|---------------|---------------|--------------------------|--------------------------|----------------------------|----------------------|----------------------|-------------|
| Lettuce                   | 1.4          | 96%           | 100%          | 714                      | 29                       | 143                        | £3.17                | £0.63                | £0.49       |
| Potato                    | 1.2          | 79%           | 75%           | 1111                     | 233                      | 1167                       | £25.93               | £5.19                | £0.20       |
| Wheat                     | 2.2          | 13%           | 34%           | 1337                     | 1163                     | 5816                       | £129.23              | £25.85               | £0.20       |

Likely to improve

# Meanwhile in Japan.....

Certain produce lines may have application

23 ha of 5 layer stack hydroponic lettuce would supply 100% of UK  
700,000 Lettuce per day

## Some novel approaches

Chil-LED's

Ceravision Plasma

Remote Phosphor LED

Double Phosphor LED's

# Energy

## The Elephant in the Greenhouse and Urban Farm!

We need to think through;

Off- Grid solutions (renewables)  
Buying Green Power  
AD plant generation
